This supplement is being provided to inform you that effective November 30, 2018, Appendix A to each Fund's Prospectus - Financial Intermediary Sales Charge Variations is supplemented to add the language as shown below. All references in each Fund's Prospectus, Statement of Additional Information, and Summary Prospectus to such Appendix A shall refer to the Appendix A as hereby amended.

Intermediary-Defined Sales Charge Waiver Policies

The availability of certain initial or deferred sales charge waivers and discounts may depend on the particular financial intermediary or type of account through which you purchase or hold Fund shares.

Intermediaries may have different policies and procedures regarding the availability of front-end sales load waivers or contingent deferred (back-end) sales load ("CDSC") waivers, which are discussed below. In all instances, it is the purchaser's responsibility to notify the fund or the purchaser's financial intermediary at the time of purchase of any relationship or other facts qualifying the purchaser for sales charge waivers or discounts. For waivers and discounts not available through a particular intermediary, shareholders will have to purchase fund shares directly from the fund or through another intermediary to receive these waivers or discounts.

Raymond James & Associates, Inc., Raymond James Financial Services & Raymond James affiliates ("Raymond James")

Effective March 1, 2019, shareholders purchasing fund shares through a Raymond James platform or account will be eligible only for the following load waivers (front-end sales charge waivers and contingent deferred, or back-end, sales charge waivers) and discounts, which may differ from those disclosed elsewhere in this Fund's prospectus or SAI.

Front-end sales load waivers on Class A shares available at Raymond James

- Shares purchased in an investment advisory program.
- Shares purchased through reinvestment of capital gains distributions and dividend reinvestment when purchasing shares of the same fund (but not any other fund within the fund family).
- Employees and registered representatives of Raymond James or its affiliates and their family members as designated by Raymond James.
- Shares purchased from the proceeds of redemptions within the same fund family, provided (1) the repurchase occurs within 90 days following the redemption, (2) the redemption and purchase occur in the same account, and (3) redeemed shares were subject to a front-end or deferred sales load (known as Rights of Reinstatement).
- A shareholder in the Fund's Class C shares will have their shares converted at net asset value to Class A shares (or the appropriate share class) of the Fund if the shares are no longer subject to a CDSC and the conversion is in line with the policies and procedures of Raymond James.

CDSC Waivers on Classes A, B and C shares available at Raymond James

- Death or disability of the shareholder.
- Shares sold as part of a systematic withdrawal plan as described in the fund's prospectus.
- Return of excess contributions from an IRA Account.
- Shares sold as part of a required minimum distribution for IRA and retirement accounts due to the shareholder reaching age 70½ as described in the fund's prospectus.
- Shares sold to pay Raymond James fees but only if the transaction is initiated by Raymond James.
- Shares acquired through a right of reinstatement.

Front-end load discounts available at Raymond James: breakpoints, and/or rights of accumulation

- Breakpoints as described in this prospectus.
- Rights of accumulation which entitle shareholders to breakpoint discounts will be automatically calculated based on the aggregated holding of fund family assets held by accounts within the purchaser's household at Raymond James. Eligible fund family assets not held at Raymond James may be included in the rights of accumulation calculation only if the shareholder notifies his or her financial advisor about such assets.

In addition, effective February 1, 2019, the following Prospectus sections are amended:

Waivers of initial sales charges for certain Class A investors on Page 46 of the Miller Income Fund and **Waivers for certain Class A investors** on Page 31 of the Miller Opportunity Trust are amended to add the following language:

- Investors who are converted from Class I shares by their program provider

Shareholder Information, Converting Shares section as previously added by supplement on June 7, 2018 to the Miller Income Fund and Page 39 of the Miller Opportunity Trust is amended to add the following language:

Investors who hold Class I shares of the Fund through a fee-based program, but who subsequently become ineligible to participate in the program or withdraw from the program, may be subject to conversion of their Class I shares by their program provider to another class of shares of the Fund having expenses (including Rule 12b-1 fees) that may be higher than the expenses of the Class I shares. Investors should contact their program provider to obtain information about their eligibility for the provider's program and the class of shares they would receive upon such a conversion.

Furthermore, the Miller Income Fund Prospectus "Performance of Related Account" section, second sentence, is revised effective the date of this supplement to reflect the correct market value as listed below:

The Other Account was a fully discretionary, fee-paying and actively managed account with a market value of approximately \$42.9 million as of December 31, 2013.

Please retain this supplement for future reference.

June 7, 2018

**Supplement to the Miller Income Fund
Prospectus, Statement of Additional Information and Summary Prospectus
each dated January 31, 2018**

Miller Income Fund	
Class A	LMCJX
Class C	LCMNX
Class FI	LMCKX
Class I	LMCLX
Class IS	LMCMX

This supplement is being provided to inform you that effective July 1, 2018, Appendix A to the Fund's Prospectus - Financial Intermediary Sales Charge Variations is supplemented to add the language as shown below. All references in the Prospectus, Statement of Additional Information, and Summary Prospectus to such Appendix A shall refer to the Appendix A as hereby amended.

Morgan Stanley Wealth Management ("Morgan Stanley")

Effective July 1, 2018, shareholders purchasing Fund shares through a Morgan Stanley Wealth Management transactional brokerage account will be eligible only for the following front-end sales charge waivers with respect to Class A shares, which may differ from and may be more limited than those disclosed elsewhere in this Fund's Prospectus or SAI.

Front-end Sales Charge Waivers on Class A Shares available at Morgan Stanley Wealth Management

- Employer-sponsored retirement plans (e.g., 401(k) plans, 457 plans, employer-sponsored 403(b) plans, profit sharing and money purchase pension plans and defined benefit plans). For purposes of this provision, employer-sponsored retirement plans do not include SEP IRAs, Simple IRAs, SAR-SEPs or Keogh plans
- Shares purchased through a Morgan Stanley self-directed brokerage account
- Shares purchased through reinvestment of dividends and capital gains distributions when purchasing shares of the same fund
- Morgan Stanley employee and employee-related accounts according to Morgan Stanley's account linking rules
- Shares purchased from the proceeds of redemptions within the same fund family, provided (i) the repurchase occurs within 90 days following the redemption, (ii) the redemption and purchase occur in the same account, and (iii) redeemed shares were subject to a front-end or deferred sales charge.
- Class C (i.e., level-load) shares that are no longer subject to a contingent deferred sales charge and are converted to Class A shares of the same fund pursuant to Morgan Stanley Wealth Management's share class conversion program

In addition, the following sections in the Prospectus are revised as shown below:

Footnote 1 to the Class A shares, sales charge breakpoint table on Page 35 is replaced with the following:

¹ A Financial Intermediary may be paid a commission on Fund purchases of \$1 million or more of up to 1.00%. Starting in the thirteenth month after purchase, these purchases will incur the annual distribution and service fee of up to 0.25%, which will be paid to the Financial Intermediary. Prior to the thirteenth month, this fee will be retained on behalf of the Fund. The Financial Intermediary will start receiving the annual 12b-1 distribution and service fee immediately if no commission is paid at purchase. Please contact your Financial Intermediary for more information.

The following section “Converting Shares” is added to the Shareholder Information section. Shareholders who qualify as stated below now also have the ability to convert shares.

Converting Shares

Generally	Investors currently owning Class A, Class C, or Class FI shares who qualify as Clients of Eligible Financial Intermediaries and participate in Eligible Investment Programs made available through their financial intermediaries (such as investors in fee-based advisory or mutual fund “wrap” programs or invested through no-load networks or platforms), may convert to Class I shares under certain limited circumstances. Investors currently owning Class C shares who qualify as above, may convert to Class A shares under certain limited circumstances. Please refer to the section of this Prospectus titled “Retirement Plans, Clients of Eligible Financial Intermediaries and Institutional Investors” or contact your financial intermediary for more information.

The Trust

Trust for Advised Portfolios is a Delaware statutory trust organized under the laws of the State of Delaware on August 28, 2003, and is registered with the U.S. Securities and Exchange Commission (the “SEC”) as an open-end management investment company. Between March 5, 2013 and January 1, 2014, the Trust was named “Ziegler Capital Management Investment Trust.” Between August 1, 2011 and March 4, 2013, the Trust was named “Ziegler Lotsoff Capital Management Investment Trust.” Prior to August 1, 2011, the Trust was named “Lotsoff Capital Management Investment Trust.”

This SAI relates only to the Miller Income Fund. The Fund is a series of the Trust.

The Miller Income Fund is a successor to the Miller Income Opportunity Trust (the “Predecessor Fund”), a series of Legg Mason Global Asset Management Trust, a Maryland statutory trust.

The Trust’s Agreement and Declaration of Trust (the “Declaration of Trust”) permits the Trust’s Board of Trustees (the “Board” or the “Trustees”) to issue an unlimited number of full and fractional shares of beneficial interest, no par value per share, which may be issued in any number of series. The Trust consists of various series that represent separate investment portfolios. The Board may from time to time issue other series, the assets and liabilities of which will be separate and distinct from any other series.

Registration with the SEC does not involve supervision of the management or policies of the Fund. The Prospectus of the Funds and this SAI omit certain of the information contained in the Registration Statement filed with the SEC. Copies of such information may be obtained from the SEC upon payment of the prescribed fee or may be accessed free of charge at the SEC’s website at www.sec.gov.

The discussion below supplements information contained in the Fund’s Prospectus as to the investment policies and risks of the Fund.

Investment Objective and Policies

The following information supplements the information concerning the Fund’s investment objective, policies and limitations found in the Prospectus.

The Fund’s objective is to seek a high level of income while maintaining the potential for growth. The investment objective of the Fund is non-fundamental and may be changed by the Trust’s Board of Trustees (the “Board”) without shareholder approval and upon notice to shareholders.

Investment Restrictions

The Trust (on behalf of the Fund) has adopted the following restrictions as fundamental policies, which may not be changed without the affirmative vote of the holders of a “majority of a Fund’s outstanding voting securities” as defined in the 1940 Act. Under the 1940 Act, the “vote of the holders of a majority of the outstanding voting securities” means the vote of the holders of the lesser of (i) 67% of the shares of a Fund represented at a meeting at which the holders of more than 50% of its outstanding shares are represented or (ii) more than 50% of the outstanding shares of a Fund.

The Fund’s fundamental policies are as follows:

1. **Borrowing:** The Fund may not borrow money, except (1) in an amount not exceeding 33-1/3% of the Fund’s total assets (including the amount borrowed) less liabilities (other than borrowings) or (2) by entering into reverse repurchase agreements or dollar rolls;
2. **Underwriting:** The Fund may not engage in the business of underwriting the securities of other issuers, except as permitted by 1940 Act, and the rules and regulations promulgated thereunder, as such statute, rules, and regulations are amended from time to time or are interpreted from time to time by the U.S. Securities and Exchange Commission (the “SEC”) or SEC staff or to the extent that the Fund may be permitted to do so by exemptive order or other relief from the SEC or SEC staff (collectively, “1940 Act Laws, Interpretations and Exemptions”). This restriction does not prevent the Fund from engaging in transactions involving the acquisition, disposition or resale of portfolio securities, regardless of whether the Fund may be considered to be an underwriter under the Securities Act of 1933, as amended (the “1933 Act”);

3. Loans: The Fund may not lend money or other assets, except to the extent permitted by the 1940 Act Laws, Interpretations and Exemptions. This restriction does not prevent the Fund from purchasing debt obligations in pursuit of its investment program or, for defensive or cash management purposes, entering into repurchase agreements, loaning its portfolio securities to financial intermediaries, institutions or institutional investors, or investing in loans, including assignments and participation interests;

4. Senior Securities: The Fund may not issue senior securities, except as permitted under the 1940 Act Laws, Interpretations and Exemptions;

5. Real Estate: The Fund may not purchase or sell real estate unless acquired as a result of ownership of securities or other instruments. This restriction does not prevent the Fund from investing in issuers that invest, deal, or otherwise engage in transactions in or hold real estate or interests therein, investing in instruments that are secured by real estate or interests therein, or exercising rights under agreements relating to such securities, including the right to enforce security interests;

6. Commodities: The Fund may not purchase or sell physical commodities unless acquired as a result of ownership of securities or other instruments. This restriction does not prevent the Fund from engaging in transactions involving foreign currency, futures contracts and options, forward contracts, swaps, caps, floors, collars, securities purchased or sold on a forward-commitment or delayed-delivery basis or other similar financial instruments, or investing in securities or other instruments that are secured by physical commodities; and

7. Concentration: The Fund may not make any investment if, as a result, the Fund's investments will be concentrated (as that term may be defined or interpreted by the 1940 Act Laws, Interpretations and Exemptions) in any one industry. This restriction does not limit the Fund's investment in securities issued or guaranteed by the U.S. Government, its agencies or instrumentalities and repurchase agreements with respect thereto, or tax exempt municipal securities issued by governments or their political subdivisions, excluding private activities, municipal debt securities whose principal and interest payments are derived principally from the assets and revenues of a non-governmental entity.

With respect to the fundamental policy relating to issuing senior securities set forth in (4) above, "senior securities" are defined as Fund obligations that have a priority over the Fund's shares with respect to the payment of dividends or the distribution of fund assets. The 1940 Act prohibits the Fund from issuing senior securities except that the Fund may borrow money in amounts of up to one-third of the Fund's total assets from banks for any purpose. The Fund may also borrow up to an amount equal to 5% of the Fund's total assets from banks or other lenders for temporary purposes, and these borrowings are not considered senior securities. The issuance of senior securities by the Fund can increase the speculative character of the Fund's outstanding shares through leveraging. Leveraging of the Fund's portfolio through the issuance of senior securities magnifies the potential for gain or loss on monies, because even though the Fund's net assets remain the same, the total risk to investors is increased to the extent of the Fund's gross assets. In addition, the SEC staff has said it will not raise senior security concerns with respect to the obligations created by certain derivatives and other instruments if the Fund segregates assets sufficient to cover those obligations or otherwise offsets them. The policy in (4) above will be interpreted not to prevent collateral arrangements with respect to swaps, options, forward or futures contracts or other derivatives, or the posting of initial or variation margin. The Fund will monitor the level of borrowing in its portfolio and will make necessary adjustments to maintain the required asset coverage on an ongoing basis. If, due to subsequent fluctuations in value or any other reasons, the value of the Fund's illiquid securities exceeds the percentage limitation applicable at the time of acquisition, the Fund will consider what actions, if any, are necessary to maintain adequate liquidity.

Although not a part of the fundamental limitation on concentration, the Fund currently uses the Bloomberg Industry Classification System to determine the appropriate classifications of its portfolio holdings for purposes of evaluating compliance with the limitation on industry concentration. Although not a part of the Fund's fundamental investment limitation on concentration, it is the current position of the SEC staff that a fund's investments are concentrated in an industry when 25% or more of the fund's total assets are invested in issuers whose principal business is in that industry.

Unless otherwise stated, the Fund's investment policies and limitations are non-fundamental and may be changed by the Board without shareholder approval. The following are some of the non-fundamental investment limitations that the Fund currently observes:

1. Illiquid Securities: The Fund may not invest more than 15% of its net assets in illiquid securities. The Fund monitors the portion of the Fund's total assets that are invested in illiquid securities on an ongoing basis, not only at the time of investment in such securities.

2. **Margin Purchases:** The Fund may not purchase securities on margin, except that (1) the Fund may obtain such short-term credits as are necessary for the clearance of transactions, and (2) the Fund may make margin payments in connection with foreign currency, futures contracts, options, forward contracts, swaps, caps, floors, collars, securities purchased or sold on a forward-commitment or delayed-delivery basis or other financial instruments.

Except as otherwise stated, if a fundamental or non-fundamental percentage limitation set forth in the Prospectus or this SAI is complied with at the time an investment is made, a later increase or decrease in percentage resulting from a change in the relevant parameters will not be considered to be outside the limitation, unless otherwise noted above. An investment will be deemed to have been made at the time the Fund enters into a binding commitment to complete the investment.

Investment Strategies and Risks

Non-Diversification

The Fund is non-diversified under the 1940 Act, which means that there is no restriction as to how much the Fund may invest in the securities of any one issuer. However, to qualify for tax treatment as a regulated investment company under the Internal Revenue Code of 1986, as amended (the "Code"), the Fund intends to comply, as of the end of each taxable quarter, with certain diversification requirements imposed by the Code. Pursuant to these requirements, at the end of each taxable quarter, the Fund, among other things, will not have investments in the securities of any one issuer (other than U.S. Government securities) of more than 25% of the value of the Fund's total assets. In addition, the Fund, with respect to 50% of its total assets, will not have investments in the securities of any issuer equal to 5% of the Fund's total assets, and will not purchase more than 10% of the outstanding voting securities of any one issuer. As a non-diversified investment company, the Fund may be subject to greater risks than diversified companies because of the larger impact of fluctuation in the values of securities of fewer issuers.

Percentage Limitations

Whenever an investment policy or limitation states a maximum percentage of the Fund's assets that may be invested in any security or other asset, or sets forth a policy regarding quality standards, such standard or percentage limitation will be determined immediately after and as a result of the Fund's acquisition or sale of such security or other asset. Accordingly, any subsequent change in values, net assets or other circumstances will not be considered in determining whether an investment complies with the Fund's investment policies and limitations. In addition, if a bankruptcy or other extraordinary event occurs concerning a particular investment by the Fund, the Fund may receive stock, real estate or other investments that the Fund would not, or could not buy. If this happens the Fund would sell such investments as soon as practicable while trying to maximize the return to its shareholders.

The Fund may employ several investment strategies, each of which is subject to certain risks, as discussed below:

Equity Securities

General. Equity securities are subject to the following risks: the risk that their prices generally fluctuate more than those of other securities, such as debt or fixed income securities; the risk that prices of securities will go down because of the interplay of market forces, which may affect a single issuer, industry or sector of the economy, country or region, or may affect the market as a whole; the risk that an adverse company-specific event, such as an unfavorable earnings report, may negatively affect the stock price of a company in which the fund invests and the risk that the fund may experience a substantial or complete loss on an individual stock.

Common Stocks. The Fund may invest in common stocks. Common stocks are shares of a corporation or other entity that entitle the holder to a pro rata share of the profits of the corporation, if any, without preference over any other shareholder or class of shareholders, including holders of the entity's preferred stock and other senior equity securities. Common stock usually carries with it the right to vote and frequently an exclusive right to do so.

Preferred Stock. Preferred stock pays dividends at a specified rate and generally has preference over common stock in the payment of dividends and the liquidation of the issuer's assets, but is junior to the debt securities of the issuer in those same respects. Unlike interest payments on debt securities, dividends on preferred stock are generally payable at the discretion of the issuer's board of directors. Shareholders of preferred stock may suffer a loss of value if dividends are not paid. The market prices of preferred stocks are subject to changes in interest rates and are more sensitive to changes in an issuer's creditworthiness than are the prices of debt securities. Under normal circumstances, preferred stock does not carry voting rights.

Trust Preferred Securities. The Fund may invest in trust preferred securities. Trust preferred securities are preferred securities typically issued by a special purpose trust subsidiary and backed by subordinated debt of that subsidiary's parent corporation. Trust preferred securities may have varying maturity dates, at times in excess of 30 years, or may have no specified maturity date with an onerous interest rate adjustment if not called on the first call date. Dividend payments of the trust preferred securities generally coincide with interest payments on the underlying subordinated debt. Trust preferred securities generally have a yield advantage over traditional preferred stocks, but unlike preferred stocks, distributions are treated as interest rather than dividend payments for federal income tax purposes and therefore, are not eligible for the dividends-received deduction. Trust preferred securities are subject to unique risks, which include the fact that dividend payments will only be paid if interest payments on the underlying obligations are made, which interest payments are dependent on the financial condition of the parent corporation and may be deferred for up to 20 consecutive quarters. There is also the risk that the underlying obligations, and thus the trust preferred securities, may be prepaid after a stated call date or as a result of certain tax or regulatory events, resulting in a lower yield to maturity.

Debt Securities

The Fund may invest in the debt securities of governmental or corporate issuers. Corporate debt securities may pay fixed or variable rates of interest, or interest at a rate contingent upon some other factor, such as the price of some commodity. These securities may be convertible into preferred or common equity, or may be bought as part of a unit containing common stock.

The prices of debt securities fluctuate in response to perceptions of the issuer's creditworthiness and also tend to vary inversely with market interest rates. The value of such securities is likely to decline in times of rising interest rates. Conversely, when rates fall, the value of these investments is likely to rise. The longer the time to maturity the greater are such variations. Shorter maturity portfolios generally will not generate as high a level of total return as longer maturity portfolios (assuming that long-term interest rates are higher than short-term, which is commonly the case).

Many fixed income securities, especially those issued at high interest rates, provide that the issuer may repay them early. Issuers often exercise this right when interest rates are low. Accordingly, holders of callable securities may not benefit fully from the increase in value that other fixed income securities experience when rates decline. Furthermore, the Fund reinvests the proceeds of the payoff at current yields, which are lower than those paid by the security that was paid off.

Certain securities pay interest at variable or floating rates. Variable rate securities reset at specified intervals, while floating rate securities reset whenever there is a change in a specified index rate. In most cases, these reset provisions reduce the effect of market interest rates on the value of the security. However, some securities do not track the underlying index directly, but reset based on formulas that can produce an effect similar to leveraging; others may provide for interest payments that vary inversely with market rates. The market prices of these securities may fluctuate significantly when interest rates change.

The Fund may purchase debt securities from the issuers or may purchase participation interests in pools of these obligations from banks or other financial institutions. Variable and floating rate obligations usually carry demand features that permit the fund to sell the obligations back to the issuers or to financial intermediaries at par value plus accrued interest upon short notice at any time or prior to specific dates. The inability of the issuer or financial intermediary to repurchase an obligation on demand could affect the liquidity of the fund's portfolio. Frequently, obligations with demand features are secured by letters of credit or comparable guarantees. Floating and variable rate obligations which do not carry unconditional demand features that can be exercised within seven days or less are deemed illiquid unless the Board determines otherwise. The Fund's investment in illiquid floating and variable rate obligations would be limited to the extent that it is not permitted to invest more than 15% of the value of its net assets in illiquid investments.

Fixed income securities are also subject to credit risk, i.e., the risk that an issuer of securities will be unable to pay principal and interest when due, or that the value of the security will suffer because investors believe the issuer is less able to pay. This is broadly gauged by the credit ratings of the securities in which the Fund invests. However, ratings are only the opinions of the agencies issuing them and are not absolute guarantees as to quality. The Fund may also invest without limit in unrated securities.

Generally, debt securities rated below BBB by Standard & Poor's, a division of The McGraw-Hill Companies, Inc. ("S&P") or Fitch Ratings ("Fitch"), below Baa by Moody's Investors Service, Inc. ("Moody's"), and unrated securities of comparable quality, are considered below investment grade, but offer a higher current yield than that provided by higher grade issues, but also involve higher risks. S&P, Moody's and Fitch are collectively recognized by the Adviser as Nationally Recognized Statistical Rating Organizations ("NRSRO"). Such securities are commonly referred to as "junk bonds." Changes in economic conditions or developments regarding the individual issuer are more likely to cause price volatility and weaken the capacity of such issuers to make principal and interest payments than is the case for issuers of higher grade debt

securities. Debt securities rated C by Moody's, S&P or Fitch are bonds on which no interest is being paid and that can be regarded as having extremely poor prospects of ever attaining any real investment standing. However, debt securities, regardless of their ratings, generally have a higher priority in the issuer's capital structure than do equity securities. The ratings of S&P, Moody's and Fitch represent the opinions of those agencies. Such ratings are relative and subjective, and are not absolute standards of quality. Unrated debt securities are not necessarily of lower quality than rated securities, but they may not be attractive to as many buyers. A description of the ratings assigned to corporate debt obligations by Moody's, S&P and Fitch is included in Appendix A.

The Adviser considers bonds to be below investment grade if they are rated below Baa/BBB by all three NRSROs, or unrated securities determined by the adviser to be of comparable quality. The Adviser will consider a security's quality and credit rating when determining whether such security is an appropriate investment. Subject to its investment objective, policies and applicable law, the Fund may purchase a security with the lowest rating.

In addition to ratings assigned to individual bond issues, the Adviser will analyze interest rate trends and developments that may affect individual issuers, including factors such as liquidity, profitability and asset quality. The yields on bonds and other debt securities in which the Fund invests are dependent on a variety of factors, including general money market conditions, general conditions in the bond market, the financial conditions of the issuer, the size of the offering, the maturity of the obligation and its rating. There may be a wide variation in the quality of bonds, both within a particular classification and between classifications. A bond issuer's obligations are subject to the provisions of bankruptcy, insolvency and other laws affecting the rights and remedies of bond holders or other creditors of an issuer; litigation or other conditions may also adversely affect the power or ability of bond issuers to meet their obligations for the payment of principal and interest. Regardless of rating levels, all debt securities considered for purchase (whether rated or unrated) are analyzed by the Adviser to determine, to the extent possible, that the planned investment is sound.

If an investment grade security purchased by the Fund is subsequently given a rating below investment grade, the Adviser will consider that fact in determining whether to retain that security in the Fund's portfolio, but is not required to dispose of it.

Risks of lower-rated securities. A lower-rated debt security may be callable, i.e., subject to redemption at the option of the issuer at a price established in the security's governing instrument. If a debt security held by the Fund is called for redemption, the Fund will be required to permit the issuer to redeem the security or sell it to a third party. Either of these actions could have an adverse effect on the Fund's ability to achieve its investment objective because, for example, the Fund may be able to reinvest the proceeds only in securities with lower yields or may receive a price upon sale that is lower than it would have received in the absence of the redemption. If the Fund experiences unexpected net redemptions, it may be forced to sell its higher-rated securities, resulting in a decline in the overall credit quality of the Fund's investment portfolio and increasing the exposure of the Fund to the risks of lower-rated securities.

At certain times in the past, the prices of many lower-rated securities declined, indicating concerns that issuers of such securities might experience financial difficulties. At those times, the yields on lower-rated securities rose dramatically, reflecting the risk that holders of such securities could lose a substantial portion of their value as a result of the issuers' financial restructuring or default. There can be no assurance that such declines will not recur.

The market for lower-rated securities may be thinner and less active than that for higher-rated securities, which can adversely affect the prices at which these securities can be sold, and may make it difficult for the Fund to obtain market quotations daily. If market quotations are not available, these securities will be valued by a method that the Board believes accurately reflects fair value. Judgment may play a greater role in valuing lower-rated debt securities than is the case with respect to securities for which a broader range of dealer quotations and last-sale information is available. Adverse publicity and investor perceptions, whether or not based on fundamental analysis, may also decrease the values and liquidity of lower-rated securities, especially in a thinly traded market.

Although the prices of lower-rated bonds are generally less sensitive to interest rate changes than are higher-rated bonds, the prices of lower-rated bonds may be more sensitive to adverse economic changes and developments regarding the individual issuer. When economic conditions appear to be deteriorating, medium- to lower-rated securities may decline in value due to heightened concern over credit quality, regardless of the prevailing interest rates. Investors should carefully consider the relative risks of investing in high yield securities and understand that such securities are not generally meant for short-term investing.

Adverse economic developments can disrupt the market for lower-rated securities and severely affect the ability of issuers, especially highly leveraged issuers, to service their debt obligations or to repay their obligations upon maturity, which may lead to a higher incidence of default on such securities. Lower-rated securities are especially affected by adverse changes

in the industries in which the issuers are engaged and by changes in the financial condition of the issuers. Highly leveraged issuers may also experience financial stress during periods of rising interest rates. In addition, the secondary market for lower-rated securities, which is concentrated in relatively few market makers, may not be as liquid as the secondary market for more highly rated securities. As a result, the Fund could find it more difficult to sell these securities without adversely affecting the market price, or may be able to sell the securities only at prices lower than if such securities were widely traded.

Short-Term Corporate Debt Securities and Short-Term Instruments

Corporate debt securities are bonds or notes issued by corporations and other business organizations, including business and statutory trusts, in order to finance their short-term credit needs. Corporate debt securities include commercial paper, which consists of short-term (usually from 1 to 270 days) unsecured promissory notes issued by corporations in order to finance their current operations. The Fund may invest in foreign corporate debt securities denominated in U.S. dollars or foreign currencies. Foreign debt securities include Yankee dollar obligations (U.S. dollar denominated securities issued by foreign corporations and traded on U.S. markets) and Eurodollar obligations (U.S. dollar denominated securities issued by foreign corporations and traded on foreign markets).

The Fund also may invest in commercial paper issued in bearer form by banks or bank holding companies and finance companies. The Fund may purchase commercial paper issued pursuant to the private placement exemption in Section 4(2) of the 1933 Act. Section 4(2) paper is restricted as to disposition under the federal securities laws in that any resale must similarly be made in an exempt transaction. The Fund may or may not regard such securities as illiquid, depending on the circumstances of each case.

Bank obligations in which the Fund may invest include certificates of deposit, bankers' acceptances and time deposits in U.S. banks (including foreign branches) which have more than \$1 billion in total assets at the time of investment and are members of the Federal Reserve System, are examined by the Comptroller of the Currency or whose deposits are insured by the Federal Deposit Insurance Corporation. The Fund also may invest in certificates of deposit of savings and loan associations (federally or state chartered and federally insured) having total assets in excess of \$1 billion. A bankers' acceptance is a time draft drawn on a commercial bank by a borrower, usually in connection with an international commercial transaction. Time deposits are non-negotiable deposits maintained in a banking institution for a specified period of time at a specified interest rate. Certificates of deposit are negotiable short-term obligations issued by banks against funds deposited in the issuing institution. The interest rate on some certificates of deposit is periodically adjusted prior to the stated maturity, based upon a specified market rate. While domestic bank deposits are insured by an agency of the U.S. Government, the Fund will generally assume positions considerably in excess of the insurance limits.

The Fund may invest in obligations of domestic or foreign branches of foreign banks and foreign branches of domestic banks. These investments involve risks that are different from investments in securities of domestic branches of domestic banks. These risks include seizure of foreign deposits, currency controls, interest limitations or other governmental restrictions which might affect the payment of principal or interest on the bank obligations held by the fund. Foreign banks are not generally subject to examination by any U.S. Government agency or instrumentality.

Real Estate Investment Trusts ("REITs")

The Fund may invest in REITs. REITs pool investors' funds for investment primarily in income producing real estate or real estate related loans or interests. An entity qualifying as a REIT under the Code generally is not subject to U.S. federal income tax on net income and gains it distributes to its shareholders if it complies with several requirements relating to its organization, ownership, assets and income and a requirement that it generally distribute to its shareholders at least 90% of its taxable income (other than net capital gain) for each taxable year. REITs can generally be classified as equity REITs, mortgage REITs and hybrid REITs. Equity REITs, which invest the majority of their assets directly in real property, derive their income primarily from rents. Equity REITs can also realize capital gains by selling properties that have appreciated in value. Mortgage REITs, which invest the majority of their assets in real estate mortgages, derive their income primarily from interest payments. Hybrid REITs combine the characteristics of both equity REITs and mortgage REITs.

While the Fund will not invest in real estate directly, to the extent it invests in equity or hybrid REITs it may be subject to risks similar to those associated with the direct ownership of real estate. These risks include declines in the value of real estate, risks related to general and local economic conditions, dependency on management skill, heavy cash flow dependency, possible lack of availability of mortgage funds, overbuilding, extended vacancies of properties, increased competition, increases in property taxes and operating expenses, changes in zoning laws, losses due to costs resulting from the clean-up of environmental problems, liability to third parties for damages resulting from environmental problems, casualty or condemnation losses, limitations on rents, changes in neighborhood values and in the appeal of properties to tenants and changes in interest rates.

REITs (especially mortgage REITs) are subject to interest rate risk. Rising interest rates may cause REIT investors to demand a higher annual yield, which may, in turn, cause a decline in the market price of the equity securities issued by a REIT. Rising interest rates also generally increase the costs of obtaining financing, which could cause the value of the fund's REIT investments to decline. During periods when interest rates are declining, mortgages are often refinanced. Refinancing may reduce the yield on investments in mortgage REITs. In addition, since REITs depend on payment under their mortgage loans and leases to generate cash to make distributions to their shareholders, investments in REITs may be adversely affected by defaults on such mortgage loans or leases.

In addition to these risks, REITs may be affected by changes in the value of the underlying property owned by the trusts or by the quality of any credit they extend. Further, REITs are dependent upon management skills and generally may not be diversified. REITs are also subject to heavy cash flow dependency, defaults by borrowers and self-liquidation. In addition, REITs could possibly fail to maintain their exemptions from registration under the 1940 Act and REITs could possibly fail to qualify for the favorable U.S. federal income tax treatment generally available to REITs under the Code. The above factors may also adversely affect a borrower's or a lessee's ability to meet its obligations to the REIT. In the event of a default by a borrower or lessee, the REIT may experience delays in enforcing its rights as a mortgagee or lessor and may incur substantial costs associated with protecting its investments. In addition to the foregoing risks, certain "special purpose" REITs in which the fund invests may invest their assets in specific real estate sectors, such as hotels, nursing homes or warehouses, and are therefore subject to the risks associated with adverse developments in any such sectors.

It is not uncommon for REITs, after the end of their taxable years, to change the characterization of the net income and gains they have distributed during the preceding year. If this happens, the Fund could be required to issue revised notices to its shareholders changing the character of the fund's distributions.

The Fund may invest wholly or partially in REITs by investing in exchange-traded funds ("ETFs") that invest in REITs.

U.S. Government Obligations and Related Securities

U.S. Government obligations include a variety of securities that are issued or guaranteed by the U.S. Treasury, by various agencies of the U.S. Government or by various instrumentalities that have been established or sponsored by the U.S. Government. U.S. Treasury securities and securities issued by the Government National Mortgage Association ("GNMA") and Small Business Administration are backed by the "full faith and credit" of the U.S. Government. Other U.S. Government obligations may or may not be backed by the "full faith and credit" of the U.S. Government. In the case of securities not backed by the "full faith and credit" of the U.S. Government, the investor must look principally to the agency issuing or guaranteeing the obligation (such as the Federal Farm Credit System, Fannie Mae and Freddie Mac) for ultimate repayment and may not be able to assert a claim against the U.S. Government itself if the agency or instrumentality does not meet its commitments.

Participation interests in U.S. Government obligations are pro rata interests in such obligations which are generally underwritten by government securities dealers. Certificates of safekeeping for U.S. Government obligations are documentary receipts for such obligations. Both participation interests and certificates of safekeeping are traded on exchanges and in the over-the-counter ("OTC") market.

The Fund may invest in U.S. Government obligations and related participation interests. In addition, the Fund may invest in custodial receipts that evidence ownership of future interest payments, principal payments or both on certain U.S. Government obligations. Such obligations are held in custody by a bank on behalf of the owners. These custodial receipts are known by various names, including Treasury Receipts, Treasury Investors Growth Receipts ("TIGRs") and Certificates of Accrual on Treasury Securities ("CATS"). Custodial receipts generally are not considered obligations of the U.S. Government for purposes of securities laws. Generally, the Fund will consider all interest-only or principal-only (See "Mortgage-Related Securities" below) fixed income securities as illiquid.

Municipal Obligations

Shareholders should note that, although interest paid on municipal obligations is generally exempt from regular federal income tax, the Fund will not hold municipal obligations in sufficient quantities to qualify to pay exempt-interest dividends. As a result, distributions by the Fund to its shareholders will be treated for federal income tax purposes as ordinary dividends without regard to the character in the hands of the fund of any interest that it receives on municipal obligations.

Municipal obligations include obligations issued to obtain funds for various public purposes, including constructing a wide range of public facilities, such as bridges, highways, housing, hospitals, mass transportation, schools and streets. Other public purposes for which municipal obligations may be issued include the refunding of outstanding obligations, the obtaining of funds for general operating expenses and the making of loans to other public institutions and facilities. In addition, certain types of private activity bonds ("PABs") are issued by or on behalf of public authorities to finance various privately operated

facilities, including certain pollution control facilities, convention or trade show facilities, and airport, mass transit, port or parking facilities.

Municipal obligations also include short-term tax anticipation notes, bond anticipation notes, revenue anticipation notes and other forms of short-term debt obligations. Such notes may be issued with a short-term maturity in anticipation of the receipt of tax payments, the proceeds of bond placements or other revenues.

The two principal classifications of municipal obligations are “general obligation” and “revenue” bonds. “General obligation” bonds are secured by the issuer’s pledge of its faith, credit and taxing power. “Revenue” bonds are payable only from the revenues derived from a particular facility or class of facilities or from the proceeds of a special excise tax or other specific revenue source such as the corporate user of the facility being financed. PABs are usually revenue bonds and are not payable from the unrestricted revenues of the issuer. The credit quality of PABs is usually directly related to the credit standing of the corporate user of the facilities.

Many municipalities currently have significant underfunded pension liabilities during a time when municipal tax bases are shrinking. These liabilities could result in the insolvency of the municipality and its inability to pay its municipal bond obligations. Some municipalities are issuing pension obligation bonds to cover shortfalls in their employee pension funds as an alternative to raising taxes. If the underlying pension fund underperforms, the pension obligation bonds may create additional costs for taxpayers, put retirement funds in jeopardy, or force municipalities into bankruptcy.

The municipal obligations in which the Fund may invest include municipal leases and participation interests therein. These obligations, which may take the form of a lease, an installment purchase or a conditional sales contract, are issued by state and local governments and authorities in order to acquire land and a wide variety of equipment and facilities, such as fire and sanitation vehicles, telecommunications equipment and other capital assets. Rather than holding such obligations directly, the Fund may purchase a participation interest in a municipal lease obligation from a bank or other third party. A participation interest gives the Fund a specified, undivided pro rata interest in the total amount of the obligation.

Municipal lease obligations have risks distinct from those associated with general obligation or revenue bonds. State constitutions and statutes set forth requirements that states or municipalities must meet to incur debt. These may include voter referenda, interest rate limits or public sale requirements. Leases, installment purchase contracts or conditional sale contracts (which normally provide for title to the leased asset to pass to the governmental issuer) have evolved as a means for governmental issuers to acquire property and equipment without meeting their constitutional and statutory requirements for the issuance of debt. The debt-issuance limitations are deemed inapplicable because of the inclusion in many leases and contracts of “non-appropriation” clauses providing that the governmental user has no obligation to make future payments under the lease or contract unless money is appropriated for such purpose by the appropriate legislative body on a yearly or other periodic basis. If a governmental user were to invoke a non-appropriation clause, the security could lose much or all of its value or could be paid in ways that do not entitle the holder to a tax exemption on the payments.

In determining the liquidity of a municipal lease obligation, the Fund will distinguish between simple or direct municipal leases and municipal lease-backed securities, the latter of which may take the form of a lease-backed revenue bond or other investment structure using a municipal lease-purchase agreement as its base. While the former may present special liquidity issues, the latter are based on a well-established method of securing payment of a municipal obligation. The Fund’s investment in municipal lease obligations and participation interests therein will be treated as illiquid unless the Adviser determines, pursuant to guidelines established by the Board that the security could be disposed of within seven days in the normal course of business at approximately the amount at which the Fund has valued the security.

An issuer’s obligations under its municipal obligations are subject to the provisions of bankruptcy, insolvency and other laws affecting the rights and remedies of creditors, such as the Federal Bankruptcy Code and laws that may be enacted by Congress or state legislatures extending the time for payment of principal or interest, or both, or imposing other constraints upon enforcement of such obligations. There is also the possibility that as a result of litigation or other conditions the power or ability of issuers to meet their obligations for the payment of interest and principal on their municipal obligations may be materially and adversely affected.

Opinions relating to the validity of municipal obligations, to the exemption of interest thereon from federal income tax and state and local income taxes and, in certain cases, to the lack of treatment of that interest as a Tax Preference Item, respectively, are rendered by counsel to the issuers at the time of issuance. Neither the Fund nor the Adviser will independently review the basis for such opinions.

The U.S. Supreme Court has held that Congress may subject the interest on municipal obligations to federal income tax. It can be expected that, as in the past, proposals will be introduced before Congress for the purpose of restricting or eliminating the federal income tax exemption for interest on municipal obligations. If any such proposals were enacted, the availability of municipal obligations for investment by the fund and the value of the municipal obligations in its portfolio could be adversely affected.

The municipal obligations in which the Fund may invest may also include obligations issued by or on behalf of the Commonwealth of Puerto Rico or its political subdivisions, agencies or instrumentalities. Such obligations may present a different set of risks than municipal obligations issued by mainland U.S. entities. Generally, not all of the types of municipal obligations described above may be available in Puerto Rico and the Puerto Rican economy may be subject to greater volatility due to a lack of market diversification. Continuing efforts for and against Puerto Rican statehood and the gradual elimination of special federal tax benefits to corporations operating in Puerto Rico, among other things, could lead to a weakened Puerto Rican economy and lower ratings and prices of Puerto Rican municipal obligations held by the fund.

On June 28, 2015, the Governor of Puerto Rico indicated that the Commonwealth will be unable to fully pay its debt, which caused Puerto Rico municipal securities to drop in value. In early August 2015, Puerto Rico failed to pay certain debts. The Commonwealth undertook extraordinary measures to avoid an additional default on December 1, 2015. However, the Governor explained on that day that unless its debt is restructured Puerto Rico would be unable to pay its obligations in January 2016. On January 4, 2016, Puerto Rico defaulted on approximately \$174 million of debt payments. If issuers of Puerto Rico municipal securities held by the Fund default on their obligations, the Fund may lose the value of those investments.

Sovereign Government and Supranational Debt

The Fund may invest in all types of debt securities of governmental issuers in all countries, including emerging markets. These sovereign debt securities may include: debt securities issued or guaranteed by governments, governmental agencies or instrumentalities and political subdivisions located in emerging market countries; debt securities issued by government owned, controlled or sponsored entities located in emerging market countries; interests in entities organized and operated for the purpose of restructuring the investment characteristics of instruments issued by any of the above issuers; Brady Bonds, which are debt securities issued under the framework of the Brady Plan as a means for debtor nations to restructure their outstanding external indebtedness; participations in loans between emerging market governments and financial institutions; or debt securities issued by supranational entities such as the World Bank.

Investments in debt securities issued by foreign governments and their political subdivisions or agencies ("Sovereign Debt") involve special risks. Sovereign debt is subject to risks in addition to those relating to non-U.S. investments generally. As a sovereign entity, the issuing government may be immune from lawsuits in the event of its failure or refusal to pay the obligations when due. The issuer of the debt or the governmental authorities that control the repayment of the debt may be unable or unwilling to repay principal and/or interest when due in accordance with the terms of such debt, and the Fund may have limited legal recourse in the event of a default.

Sovereign Debt differs from debt obligations issued by private entities in that, generally, remedies for defaults must be pursued in the courts of the defaulting party. Legal recourse is therefore somewhat diminished. Political conditions, especially a sovereign entity's willingness to meet the terms of its debt obligations, are of considerable significance. Also, holders of commercial bank debt issued by the same sovereign entity may contest payments to the holders of Sovereign Debt in the event of default under commercial bank loan agreements.

A sovereign debtor's willingness or ability to repay principal and interest due in a timely manner may be affected by, among other factors, its cash flow situation, the extent of its non-U.S. reserves, the availability of sufficient non-U.S. exchange on the date a payment is due, the relative size of the debt service burden to the economy as a whole, the sovereign debtor's policy toward principal international lenders and the political constraints to which the sovereign debtor may be subject.

Sovereign debtors may also be dependent on disbursements or assistance from foreign governments or multinational agencies, the country's access to trade and other international credits, and the country's balance of trade. Assistance may be dependent on a country's implementation of austerity measures and reforms, which measures may limit or be perceived to limit economic growth and recovery. Public reaction against such measures in the recipient country may impede implementation. Some sovereign debtors have rescheduled their debt payments, declared moratoria on payments or restructured their debt to effectively eliminate portions of it, and similar occurrences may happen in the future. There is no bankruptcy proceeding by which sovereign debt on which governmental entities have defaulted may be collected in whole or in part.

A sovereign debtor's willingness or ability to repay principal and interest due in a timely manner may be affected by, among other factors, its cash flow situation, the extent of its foreign reserves, the availability of sufficient foreign exchange on the date a payment is due, the relative size of the debt service burden to the economy as a whole, the severing debtor's policy toward principal international lenders and the political constraints to which a sovereign debtor may be subject. Increased protectionism on the part of a country's trading partners or political changes in those countries, could also adversely affect its exports. Such events could diminish a country's trade account surplus, if any, or the credit standing of a particular local government or agency.

The ability of some sovereign debtors to repay their obligations may depend on the timely receipt of assistance from international agencies or other governments, the flow of which is not assured. The willingness of such agencies to make these payments may depend on the sovereign debtor's willingness to institute certain economic changes, the implementation of which may be politically difficult.

The occurrence of political, social or diplomatic changes in one or more of the countries issuing Sovereign Debt could adversely affect the fund's investments. Political changes or a deterioration of a country's domestic economy or balance of trade may affect the willingness of countries to service their Sovereign Debt. While the Adviser endeavors to manage investments in a manner that will minimize the exposure to such risks, there can be no assurance that adverse political changes will not cause the Fund to suffer a loss of interest or principal on any of its holdings.

The Fund may invest in debt securities issued by supranational entities. A supranational entity is a bank, commission or company established or financially supported by the national governments of one or more countries to promote reconstruction or development. Included among these organizations are the Asian Development Bank, the European Community, the European Investment Bank, the Inter-American Development Bank, the International Monetary Fund, the United Nations, the World Bank and the European Bank for Reconstruction and Development. Supranational organizations have no taxing authority and are dependent on their members for payments of interest and principal. Further, the lending activities of such entities are limited to a percentage of their total capital, reserves and net income.

Convertible Securities

A convertible security is a bond, debenture, note, preferred stock or other security that may be converted into or exchanged for a prescribed amount of common stock of the same or a different issuer within a particular period of time at a specified price or formula. A convertible security entitles the holder to receive interest paid or accrued on debt or the dividend paid on preferred stock until the convertible security matures or is redeemed, converted or exchanged. Before conversion or exchange, convertible securities ordinarily provide a stream of income with generally higher yields than those of common stocks of the same or similar issuers, but lower than the yield of non-convertible debt. Convertible securities are usually subordinated to comparable-tier nonconvertible securities, but rank senior to common stock in a corporation's capital structure.

The value of a convertible security is a function of (1) its yield in comparison with the yields of other securities of comparable maturity and quality that do not have a conversion privilege and (2) its worth, at market value, if converted or exchanged into the underlying common stock. The price of a convertible security often reflects variations in the price of the underlying common stock in a way that nonconvertible debt does not. A convertible security may be subject to redemption at the option of the issuer at a price established in the convertible security's governing instrument, which may be less than the ultimate conversion or exchange value. If a convertible security held by the Fund is called for redemption, the Fund will be required to (1) permit the issuer to redeem the security (2) convert it into the underlying common stock or (3) sell it to a third party.

Many convertible securities are rated below investment grade or, if unrated, are considered of comparable quality by the Adviser.

Short Sales

A short sale is effected when it is believed that the price of a particular security will decline, and involves the sale of a security which the Fund does not own in the hope of purchasing the same security at a later date at a lower price. There can be no assurance that the Fund will be able to close out a short position (i.e., purchase the same security) at any particular time or at an acceptable or advantageous price. To make delivery to the buyer, the Fund must borrow the security from a broker/dealer through which the short sale is executed, and the broker/dealer delivers the security, on behalf of the Fund, to the buyer. The broker/dealer is entitled to retain the proceeds from the short sale until the Fund delivers to such broker/dealer the security sold short. In addition, the Fund is required to pay to the broker/dealer the amount of any dividends or interest paid on shares sold short.

The Fund may also enter into a short position through a short derivative position using a futures contract or swap agreement. Using this investment technique subjects the Fund to the same risks and cover requirements as short sales.

The Fund must segregate an amount of cash or liquid securities with its custodian equal to the difference between the current market value of the securities sold short and any cash or liquid securities deposited as collateral with the broker in connection with the short sale (not including the proceeds of the short sale). To the extent that the liquid securities segregated by its custodian or deposited as collateral with the broker are subject to gains or loss, while the securities sold short are also being subject to the possibility of gain or loss, leverage is created. The liquid securities utilized by the Fund in this respect will normally be comprised of portfolio securities that are subject to gains or losses and, accordingly, when the Fund executes short sales leverage will normally be created.

The Fund is said to have a short position in the securities sold until it delivers to the broker/dealer the securities sold, at which time the Fund receives the proceeds of the sale. The Fund will normally close out a short position by purchasing on the open market and delivering to the broker/dealer an equal amount of the securities sold short.

The Fund will realize a gain if the price of a security declines between the date of the short sale and the date on which the Fund purchases a security to replace the borrowed security. On the other hand, the Fund will incur a loss if the price of the security increases between those dates. The amount of any gain will be decreased and the amount of any loss increased by any premium or interest that the Fund may be required to pay in connection with a short sale. It should be noted that possible losses from short sales differ from those that could arise from a cash investment in a security in that losses from a short sale may be limitless, while the losses from a cash investment in a security cannot exceed the total amount of the investment in the security.

There is also a risk that a borrowed security will need to be returned to the broker/dealer on short notice. If the request for the return of a security occurs at a time when other short sellers of the security are receiving similar requests, a “short squeeze” can occur, meaning that the Fund might be compelled, at the most disadvantageous time, to replace the borrowed security with a security purchased on the open market, possibly at prices significantly in excess of the proceeds received earlier.

The Fund may also hold short positions “against the box,” meaning that at all times when a short position is open the Fund owns an equal amount of such securities or securities convertible into or exchangeable, without payment of further consideration, for securities of the same issue as, and in an amount equal to, the securities sold short. Short positions “against the box” result in a “constructive sale” and require the Fund to recognize any gain unless an exception to the constructive sale rule applies.

The Fund’s ability to engage in short sales may be impaired by temporary prohibitions on short selling that may be imposed by domestic and/or foreign government regulators.

Asset-Backed Securities (“ABS”) and Mortgage-Related and Mortgage-Backed Securities (“MBS”)

The Fund may purchase asset-backed, mortgage-related and MBS. MBS, including collateralized mortgage obligations (“CMOs”) and certain stripped MBS, represent a participation in, or are secured by, mortgage loans. ABS are structured like MBS, but instead of mortgage loans or interests in mortgage loans, the underlying assets may include such items as motor vehicle installment sales or installment loan contracts, leases of various types of real and personal property, receivables from credit card agreements, company receivables or other assets. The cash flow generated by the underlying assets is applied to make required payments on the securities and to pay related administrative expenses. The amount of residual cash flow resulting from a particular issue of asset-backed or MBS depends on, among other things, the characteristics of the underlying assets, the coupon rates on the securities, prevailing interest rates, the amount of administrative expenses, and the actual prepayment experience on the underlying assets. Each Fund may invest in any such instruments or variations as may be developed, to the extent consistent with its investment objectives and policies and applicable regulatory requirements. In general, the collateral supporting ABS is of a shorter maturity than mortgage loans and is likely to experience substantial prepayments.

Mortgage-backed securities have yield and maturity characteristics corresponding to the underlying assets. Unlike traditional debt securities, which may pay a fixed rate of interest until maturity, when the entire principal amount comes due, payments on certain mortgage-backed securities include both interest and a partial repayment of principal. Besides the scheduled repayment of principal, repayments of principal may result from the voluntary prepayment, refinancing or foreclosure of the underlying mortgage loans. If property owners make unscheduled prepayments of their mortgage loans, these prepayments will result in early payment of the applicable mortgage-backed securities. In that event, the Fund may be unable to invest the proceeds from the early payment of the mortgage-backed securities in an investment that provides as high a yield as the MBS. Consequently, early payment associated with MBS may cause these securities to experience significantly greater price and yield volatility than that experienced by traditional fixed-income securities. The occurrence of mortgage prepayments is affected by factors including the level of interest rates, general economic conditions, the location

and age of the mortgage and other social and demographic conditions. During periods of falling interest rates, the rate of mortgage prepayments tends to increase, thereby tending to decrease the life of MBS. During periods of rising interest rates, the rate of mortgage prepayments usually decreases, thereby tending to increase the life of MBS. If the life of a mortgage-backed security is inaccurately predicted, the Fund may not be able to realize the expected rate of return.

Adjustable rate mortgage securities ("ARMs"), like traditional MBS, are interests in pools of mortgage loans that provide investors with payments consisting of both principal and interest as mortgage loans in the underlying mortgage pool are paid off by the borrowers. Unlike fixed-rate MBS, ARMs are collateralized by or represent interests in mortgage loans with variable rates of interest. These interest rates are reset at periodic intervals, usually by reference to an interest rate index or market interest rate. Although the rate adjustment feature may act as a buffer to reduce sharp changes in the value of adjustable rate securities, these securities are still subject to changes in value based on, among other things, changes in market interest rates or changes in the issuer's creditworthiness. Because the interest rates are reset only periodically, changes in the interest rate on ARMs may lag changes in prevailing market interest rates. Also, some ARMs (or the underlying mortgages) are subject to caps or floors that limit the maximum change in the interest rate during a specified period or over the life of the security. As a result, changes in the interest rate on an ARM may not fully reflect changes in prevailing market interest rates during certain periods.

The Funds may also invest in hybrid ARMs, whose underlying mortgages combine fixed-rate and adjustable rate features.

Mortgage-backed and ABS are less effective than other types of securities as a means of locking in attractive long-term interest rates. One reason is the need to reinvest prepayments of principal; another is the possibility of significant unscheduled prepayments resulting from declines in interest rates. These prepayments would have to be reinvested at lower rates. The automatic interest rate adjustment feature of mortgages underlying ARMs likewise reduces the ability to lock-in attractive rates. As a result, mortgage-backed and ABS may have less potential for capital appreciation during periods of declining interest rates than other securities of comparable maturities, although they may have a similar risk of decline in market value during periods of rising interest rates. Prepayments may also significantly shorten the effective maturities of these securities, especially during periods of declining interest rates. Conversely, during periods of rising interest rates, a reduction in prepayments may increase the effective maturities of these securities, subjecting them to a greater risk of decline in market value in response to rising interest rates than traditional debt securities, and, therefore, potentially increasing the volatility of a Fund.

At times, some mortgage-backed and ABS will have higher than market interest rates and therefore will be purchased at a premium above their par value. Prepayments may cause losses on securities purchased at a premium.

CMOs may be issued by a U.S. Government agency or instrumentality or by a private issuer. Although payment of the principal of, and interest on, the underlying collateral securing privately issued CMOs may be guaranteed by the U.S. Government or its agencies or instrumentalities, these CMOs represent obligations solely of the private issuer and are not insured or guaranteed by the U.S. Government, its agencies or instrumentalities or any other person or entity.

Prepayments could cause early retirement of CMOs. CMOs are designed to reduce the risk of prepayment for certain investors by issuing multiple classes of securities, each having different maturities, interest rates and payment schedules, and with the principal and interest on the underlying mortgages allocated among the several classes in various ways. Payment of interest or principal on some classes or series of CMOs may be subject to contingencies or some classes or series may bear some or all of the risk of default on the underlying mortgages. CMOs of different classes or series are generally retired in sequence as the underlying mortgage loans in the mortgage pool are repaid. If enough mortgages are repaid ahead of schedule, the classes or series of a CMO with the earliest maturities generally will be retired prior to their maturities. Thus, the early retirement of particular classes or series of a CMO would have the same effect as the prepayment of mortgages underlying other MBS. Conversely, slower than anticipated prepayments can extend the effective maturities of CMOs, subjecting them to a greater risk of decline in market value in response to rising interest rates than traditional debt securities, and, therefore, potentially increasing their volatility.

Subprime mortgage loans, which typically are made to less creditworthy borrowers, have a higher risk of default than conventional mortgage loans. Therefore, MBS backed by subprime mortgage loans may suffer significantly greater declines in value due to defaults or the increased risk of default.

The risks associated with other ABS (including in particular the risks of issuer default and of early prepayment) are generally similar to those described for CMOs. In addition, because ABS generally do not have the benefit of a security interest in the underlying assets comparable to a mortgage, ABS present certain additional risks that are not present with MBS. The ability of an issuer of ABS to enforce its security interest in the underlying assets may be limited. For example, revolving credit receivables are generally unsecured and the debtors on such receivables are entitled to the protection of a number of state

and federal consumer credit laws, many of which give debtors the right to set-off certain amounts owed, thereby reducing the balance due. Automobile receivables generally are secured, but by automobiles, rather than by real property.

ABS may be collateralized by the fees earned by service providers. The values of ABS may be substantially dependent on the servicing of the underlying asset and are therefore subject to risks associated with the negligence or malfeasance by their servicers and to the credit risk of their servicers. In certain circumstances, the mishandling of related documentation may also affect the rights of the security holders in and to the underlying collateral. The insolvency of entities that generate receivables or that utilize the assets may result in added costs and delays in addition to losses associated with a decline in the value of the underlying assets. For the purposes of each Fund's concentration policy, ABS (a) do not represent interests in any particular "industry"; and (b) will be classified in a consistent manner deemed reasonable by the Fund.

Equipment Trust Certificates ("ETCs")

The Fund may invest in ETCs. ETCs are typically issued by railroads, airlines or other transportation firms, and the proceeds of those certificates are used to purchase equipment, such as railroad cars, airplanes or other equipment, which in turn serve as collateral for the related issue of certificates. The equipment subject to the trust generally is leased by a railroad, airline or other business, and rental payments provide the projected cash flow for the repayment of ETCs. Equipment trust certificates are subject to the risk that the lessee or payee defaults on its payments, and risks related to the potential decline in the value of the equipment that serves as collateral for the issue. Holders of ETCs must look to the collateral securing the certificates, and any guarantee provided by the lessee or any parent corporation for the payment of lease amounts, in the case of default on the payment of principal and interest on the certificates.

Forward Commitments

The Fund may enter into commitments to purchase U.S. Government securities or other securities on a "forward commitment" basis, including purchases on a "when-issued," a "delayed-delivery" or a "to be announced" basis. When such transactions are negotiated, the price is fixed at the time the commitment is made, but delivery and payment for the securities takes place at a later date. The Fund may sell the securities subject to a forward commitment purchase, which may result in a gain or a loss. When the Fund purchases securities on a forward commitment basis, it assumes the risks of ownership, including the risk of price fluctuation, at the time of purchase, not at the time of receipt. Purchases of forward commitments also involve a risk of loss if the seller fails to deliver after the value of the securities has risen.

The Fund will maintain segregated cash or appropriate liquid securities in an amount at least equal to the amount of the Fund's forward commitment transactions. On the settlement date, the Fund will meet its obligations from then available cash flow, the sale of segregated securities, the sale of other securities or, although it normally would not expect to do so, from the sale of the when-issued or delayed-delivery securities themselves (which may have a greater or lesser value than the fund's payment obligations).

The Fund may sell the securities underlying a when-issued or delayed delivery commitment, which may result in capital gains or losses.

TBA Purchase Commitments. TBA or "To Be Announced" purchase commitments are commitments to purchase securities for a fixed price at a future date, typically not exceeding 75 to 90 days. TBA purchase commitments may be considered securities in themselves and involve a risk of loss if the value of the security to be purchased declines prior to settlement date. Unsettled TBA purchase commitments are valued at the current market value of the underlying securities and the fund will set aside cash or other liquid assets in an amount at least equal to such commitments. On delivery dates for such transactions, the Fund will meet its obligations from maturities or sales of the segregated securities and/or from cash flow. If the Fund chooses to dispose of the TBA security prior to its settlement, it could, as with the disposition of any other portfolio obligation, incur a gain or loss due to market fluctuation.

Firm Commitments. Securities may be purchased on a firm commitment basis, including when-issued securities. Securities purchased on a firm commitment basis are purchased for delivery beyond the normal settlement date at a stated price and yield. No income accrues to the purchaser of a security on a firm commitment basis prior to delivery. Such securities are recorded as an asset and are subject to changes in value based upon changes in the general level of interest rates. Purchasing a security on a firm commitment basis can involve a risk that the market price at the time of delivery may be lower than the agreed-upon purchase price, in which case there could be an unrealized loss at the time of delivery. The Fund may sell commitments to purchase securities on a firm commitment basis before the settlement date.

Stand-by Commitments. A stand-by commitment involves the purchase of securities by the Fund together with the right to resell them to the seller or a third party at an agreed-upon price or yield within specified periods prior to their maturity dates. Such a right to resell is commonly known as a stand-by commitment, and the aggregate price which the fund pays for securities with a stand-by commitment may increase the cost, and thereby reduce the yield, of the security. The primary

purpose of this practice is to provide the Fund with liquidity as needed. Stand-by commitments involve certain expenses and risks, including the inability of the issuer of the commitment to pay for the securities at the time the commitment is exercised, non-marketability of the commitment and differences between the maturity of the underlying security and the maturity of the commitment.

Illiquid Investments and Restricted Securities

The Fund may invest up to 15% of its net assets in illiquid investments. An illiquid security is any security which may not be sold or disposed of in the ordinary course of business within seven days at approximately the value at which the Fund has valued the security. To the extent required by applicable law and SEC guidance, the Fund will not acquire an illiquid security if such acquisition would cause the aggregate value of illiquid securities to exceed 15% of the Fund's net assets. If at any time the Adviser determines that the value of illiquid securities held by a Fund exceeds 15% of the Fund's net assets, the Adviser will take such steps as it considers appropriate to reduce the percentage as soon as reasonably practicable; a Fund may, however, hold any such investments for a substantial period of time.

Restricted securities are securities subject to legal or contractual restrictions on their resale, such as private placements. Such restrictions might prevent the sale of restricted securities at a time when the sale would otherwise be desirable. Under SEC regulations, certain restricted securities acquired through private placements can be traded freely among qualified purchasers. While restricted securities are generally classified as illiquid, the SEC has stated that an investment company's board of directors, or its investment adviser acting under authority delegated by the board, may determine that a security eligible for trading under this rule is "liquid." The Fund intends to rely on this rule, to the extent appropriate, to deem specific securities acquired through private placement as "liquid." The Board has delegated to the Adviser, pursuant to guidelines established by the Board, the responsibility for determining whether a particular security eligible for trading under this rule is "liquid." Investing in these restricted securities could have the effect of increasing the fund's illiquidity if qualified purchasers become, for a time, uninterested in buying these securities.

Restricted securities may be sold only (1) pursuant to SEC Rule 144A or another exemption, (2) in privately negotiated transactions or (3) in public offerings with respect to which a registration statement is in effect under the Securities Act of 1933, as amended. Rule 144A securities, although not registered in the U.S., may be sold to qualified institutional buyers in accordance with Rule 144A under the Securities Act of 1933, as amended. As noted above, the Adviser, acting pursuant to guidelines established by the Board, may determine that some Rule 144A securities are liquid. Where registration is required, the Fund may be obligated to pay all or part of the registration expenses and a considerable period may elapse between the time of the decision to sell and the time the Fund may be permitted to sell a restricted security under an effective registration statement. If, during such a period, adverse market conditions were to develop, the Fund might obtain a less favorable price than prevailed when it decided to sell.

Illiquid securities may be difficult to value, and the Fund may have difficulty disposing of such securities promptly. The Fund does not consider non-U.S. securities to be restricted if they can be freely sold in the principal markets in which they are traded, even if they are not registered for sale in the U.S.

Senior Securities

The 1940 Act prohibits the issuance of senior securities by a registered open-end fund with one exception. The Fund may borrow from banks provided that immediately after any such borrowing there is an asset coverage of at least 300% for all borrowings of the Fund. The Fund's non-bank borrowings for temporary purposes only, in an amount not exceeding 5% of the value of the total assets of the Fund at the time the borrowing is made, are not deemed to be an issuance of a senior security. To limit the risks attendant to borrowing, the 1940 Act requires the Fund to maintain an "asset coverage" of at least 300% of the amount of its borrowing, provided that in the event the Fund's asset coverage falls below 300%, the Fund is required to reduce the amount of its borrowings so that it meets the 300% asset coverage threshold within three days (not including Sundays and holidays).

There are various investment techniques that may give rise to an obligation of the Fund to make a future payment, about which the SEC has stated it would not raise senior security concerns, provided the Fund complies with SEC guidance regarding cover for these investment techniques. Such investment techniques include, among other things, when-issued securities, futures and forward contracts, short-options positions and repurchase agreements.

Securities of Other Investment Companies

The Fund may invest in the securities of other investment companies, including open-end mutual funds, closed-end funds (including, business development companies), unit investment trusts, private investment companies and offshore investment companies. An investment in an investment company involves risks similar to those of investing directly in the investment company's portfolio securities, including the risk that the value of the portfolio securities may fluctuate in

accordance with changes in the financial condition of their issuers, the value of stocks and other securities generally, and other market factors.

In addition, investing in the securities of other investment companies involves certain other risks, costs and expenses for the Fund. If the Fund invests in another investment company, the Fund will indirectly bear its proportionate share of the advisory fees and other operating expenses of such investment company, which are in addition to the advisory fees and other operational expenses incurred by the Fund. In addition, the Fund could incur a sales charge in connection with purchasing an investment company security or a redemption fee upon the redemption of such security. An investment in the shares of a closed-end investment company, including a business development company, may also involve the payment of a substantial premium over, while sales of such shares may be made at a substantial discount from, the NAV ("NAV") of the Fund's assets. Business development companies are publicly-traded mezzanine/private equity funds that typically invest in and lend to small and medium-sized private companies that may not have access to public equity markets for capital raising.

The Fund may also invest in the securities of private investment companies, including "hedge funds" and "private equity funds," subject to the Fund's non-fundamental policy prohibiting it from purchasing or otherwise acquiring such securities if, as a result, more than 15% of its net assets would be invested in securities that are illiquid. As with investments in other investment companies, if the Fund invests in a private investment company, the Fund will be charged its proportionate share of the advisory fees including incentive compensation and other operating expenses of such company. These fees, which can be substantial, would be in addition to the advisory fees and other operating expenses incurred by the Fund. In addition, private investment companies are not registered with the SEC and may not be registered with any other regulatory authority. Accordingly, they are not subject to certain regulatory requirements and oversight to which registered issuers are subject. There may be very little public information available about their investments and performance. Moreover, because sales of shares of private investment companies are generally restricted to certain qualified purchasers, such shares may be illiquid and it could be difficult for the fund to sell its shares at an advantageous price and time. Finally, because shares of private investment companies are not publicly traded, a fair value for the Fund's investment in these companies typically will have to be determined under policies approved by the Board.

The 1940 Act provides that the fund may not purchase or otherwise acquire the securities of other "registered investment companies" (as defined in the 1940 Act) if, as a result of such purchase or acquisition, it would own: (i) more than 3% of the total outstanding voting stock of the acquired investment company; (ii) securities issued by any one investment company having a value in excess of 5% of the fund's total assets; or (iii) securities issued by all investment companies having an aggregate value in excess of 10% of the fund's total assets. Certain exceptions may be available from these limits such as when the Fund invests in certain exchange-traded funds or money market funds.

The Fund will invest in the securities of other investment companies, including private investment companies, when, in the Adviser's judgment, the potential benefits of the investment justify the expense and risk of investing in such investment companies.

Securities of Exchange-Traded Funds ("ETFs")

The Fund may invest in the securities of ETFs. ETFs are ownership interests in investment companies, unit investment trusts, depository receipts and other pooled investment vehicles that are traded on an exchange and that hold a portfolio of securities or other financial instruments (the "Underlying Assets"). The Underlying Assets are typically selected to correspond to the securities that comprise a particular broad based sector or international index, or to provide exposure to a particular industry sector or asset class. "Short ETFs" seek a return similar to the inverse, or a multiple of the inverse, of a reference index. Short ETFs carry additional risks because their Underlying Assets may include a variety of financial instruments, including futures and options on futures, options on securities and securities indexes, swap agreements and forward contracts, and may engage in short sales. An ETF's losses on short sales are potentially unlimited; however, the Fund's risk would be limited to the amount it invested in the ETF.

Unlike shares of typical mutual funds or unit investment trusts, shares of ETFs are designed to be traded throughout the trading day, bought and sold based on market prices rather than NAV. Shares can trade at either a premium or discount to NAV. The portfolios held by ETFs are publicly disclosed on each trading day and an approximation of actual NAV is disseminated throughout the trading day. Because of this transparency, the trading prices of ETFs tend to closely track the actual NAV of the Underlying Assets and the Fund will generally gain or lose value depending on the performance of the Underlying Assets. In the future, as new products become available, the Fund may invest in ETFs that do not have this same level of transparency and, therefore, may be more likely to trade at a larger discount or premium to actual NAVs. Gains or losses on the Fund's investment in ETFs will ultimately depend on the purchase and sale price of the ETF. An active trading market for an ETF's shares may not develop or be maintained and trading of an ETF's shares may be halted

if the listing exchange's officials deem such action appropriate, the shares are delisted from the exchange or the activation of market-wide "circuit breakers" (which are tied to large decreases in stock prices) halts stock trading generally.

An investment in an ETF involves risks similar to investing directly in the Underlying Assets, including the risk that the value of the Underlying Assets may fluctuate in accordance with changes in the financial condition of their issuers, the value of securities and other financial instruments generally, and other market factors.

The performance of an ETF will be reduced by transaction and other expenses, including fees paid by the ETF to service providers. Investors in ETFs are eligible to receive their portion of income, if any, accumulated on the securities held in the portfolio, less fees and expenses of the ETF.

If an ETF is a registered investment company (as defined in the 1940 Act), the limitations applicable to the Fund's ability to purchase securities issued by other investment companies will apply.

Foreign Securities

The Fund may invest in the securities of foreign issuers, foreign currencies and securities of U.S. issuers with substantial foreign operations (collectively, "foreign investments"). Foreign investments present certain risks, including those resulting from fluctuations in currency exchange rates, revaluation of currencies, future political and economic developments and the possible imposition of currency exchange blockages or other foreign governmental laws or restrictions, reduced availability of public information concerning issuers, and the fact that foreign issuers are not generally subject to uniform accounting, auditing and financial reporting standards or other regulatory practices and requirements comparable to those applicable to domestic issuers. These risks are intensified when investing in countries with developing economies and securities markets, also known as "emerging markets." Moreover, securities of many foreign issuers may be less liquid and their prices more volatile than those of comparable domestic issuers and transactions in securities of foreign issuers may be subject to less efficient settlement practices, including extended clearance and settlement periods. In addition, with respect to certain foreign countries, there is the possibility of expropriation, confiscatory taxation, withholding taxes and limitations on the use or removal of funds or other assets.

The costs associated with investment in the securities of foreign issuers, including withholding taxes, brokerage commissions and custodial fees, may be higher than those associated with investment in domestic issuers. In addition, foreign investment transactions may be subject to difficulties associated with the settlement of such transactions. Delays in settlement could result in temporary periods when assets of the Fund are uninvested and no return can be earned thereon. The inability of the Fund to make intended investments due to settlement problems could cause the Fund to miss attractive investment opportunities. Inability to dispose of a portfolio security due to settlement problems could result in losses to the Fund due to subsequent declines in value of the portfolio security or, if the Fund has entered into a contract to sell the security, could result in liability to the purchaser. Some emerging markets have different settlement and clearance procedures. In certain markets there have been times when settlements have been unable to keep pace with the volume of securities transactions, making it difficult to conduct such transactions.

Since the Fund may invest in securities denominated in currencies other than the U.S. dollar and since the Fund may hold foreign currencies, it may be affected favorably or unfavorably by exchange control regulations or changes in exchange rates between such currencies and the U.S. dollar. Changes in the currency exchange rates may influence the value of the Fund's shares, and may also affect the value of dividends and interest earned by the Fund and gains and losses realized by the Fund. Exchange rates are determined by the forces of supply and demand in the foreign exchange markets. These forces are affected by the international balance of payments, other economic and financial conditions, government intervention, speculation and other factors.

Many emerging market countries have experienced substantial, and in some periods extremely high, rates of inflation for many years. Inflation and rapid fluctuations in inflation rates have had, and may continue to have, very negative effects on the economies and securities markets of certain emerging markets. Economies in emerging markets generally are heavily dependent upon international trade and, accordingly, have been and may continue to be affected adversely by economic conditions, trade barriers, exchange controls, managed adjustments in relative currency values and other protectionist measures imposed or negotiated by the countries with which they trade.

Because of the high levels of foreign-denominated debt owed by many emerging market countries, fluctuating exchange rates can significantly affect the debt service obligations of those countries. This could, in turn, affect local interest rates, profit margins and exports, which are a major source of foreign exchange earnings. Although it might be theoretically possible to hedge for anticipated income and gains, the ongoing and indeterminate nature of the foregoing risks (and the costs associated with hedging transactions) makes it virtually impossible to hedge effectively against such risks.

To the extent an emerging market country faces a liquidity crisis with respect to its foreign exchange reserves, it may increase restrictions on the outflow of any foreign exchange. Repatriation is ultimately dependent on the ability of the fund to liquidate its investments and convert the local currency proceeds obtained from such liquidation into U.S. dollars. Where this conversion must be done through official channels (usually the central bank or certain authorized commercial banks), the ability to obtain U.S. dollars is dependent on the availability of such U.S. dollars through those channels, and if available, upon the willingness of those channels to allocate those U.S. dollars to the fund. In such a case, the Fund's ability to obtain U.S. dollars may be adversely affected by any increased restrictions imposed on the outflow of foreign exchange. If the Fund is unable to repatriate any amounts due to exchange controls, it may be required to accept an obligation payable at some future date by the central bank or other governmental entity of the jurisdiction involved. If such conversion can legally be done outside official channels, either directly or indirectly, the Fund's ability to obtain U.S. dollars may not be affected as much by any increased restrictions except to the extent of the price which may be required to be paid for the U.S. dollars.

Many emerging market countries have little experience with the corporate form of business organization and may not have well-developed corporation and business laws or concepts of fiduciary duty in the business context.

The securities markets of emerging markets are substantially smaller, less developed, less liquid and more volatile than the securities markets of the United States and other more developed countries. Disclosure and regulatory standards in many respects are less stringent than in the United States and other major markets. There also may be a lower level of monitoring and regulation of emerging markets and the activities of investors in such markets; enforcement of existing regulations has been extremely limited. Investing in the securities of companies in emerging markets may entail special risks relating to the potential political and economic instability and the risks of expropriation, nationalization, confiscation or the imposition of restrictions on foreign investment, convertibility of currencies into U.S. dollars and on repatriation of capital invested. In the event of such expropriation, nationalization or other confiscation by any country, the Fund could lose its entire investment in any such country.

The risk also exists that an emergency situation may arise in one or more emerging markets as a result of which trading of securities may cease or may be substantially curtailed and prices for the Fund's portfolio securities in such markets may not be readily available.

Economic, Political and Social Factors. Certain non-U.S. countries, including emerging markets, may be subject to a greater degree of economic, political and social instability. Such instability may result from, among other things: (i) authoritarian governments or military involvement in political and economic decision making; (ii) popular unrest associated with demands for improved economic, political and social conditions; (iii) internal insurgencies; (iv) hostile relations with neighboring countries; and (v) ethnic, religious and racial disaffection and conflict. Such economic, political and social instability could significantly disrupt the financial markets in such countries and the ability of the issuers in such countries to repay their obligations. In addition, it may be difficult for the Fund to pursue claims against a foreign issuer in the courts of a foreign country. Investing in emerging market countries also involves the risk of expropriation, nationalization, confiscation of assets and property or the imposition of restrictions on foreign investments and on repatriation of capital invested. In the event of such expropriation, nationalization or other confiscation in any emerging market country, the Fund could lose its entire investment in that country. Certain emerging market countries restrict or control foreign investment in their securities markets to varying degrees. These restrictions may limit the Fund's investment in those markets and may increase the expenses of the Fund. In addition, the repatriation of both investment income and capital from certain markets in the region is subject to restrictions such as the need for certain governmental consents. Even where there is no outright restriction on repatriation of capital, the mechanics of repatriation may affect certain aspects of the Fund's operation. Economies in individual non-U.S. countries may differ favorably or unfavorably from the U.S. economy in such respects as growth of gross domestic product, rates of inflation, currency valuation, capital reinvestment, resource self-sufficiency and balance of payments positions. Many non-U.S. countries have experienced substantial, and in some cases extremely high, rates of inflation for many years. Inflation and rapid fluctuations in inflation rates have had, and may continue to have, very negative effects on the economies and securities markets of certain emerging countries. Economies in emerging countries generally are dependent heavily upon international trade and, accordingly, have been and may continue to be affected adversely by trade barriers, exchange controls, managed adjustments in relative currency values and other protectionist measures imposed or negotiated by the countries with which they trade. These economies also have been, and may continue to be, affected adversely and significantly by economic conditions in the countries with which they trade. Whether or not the Fund invests in securities of issuers located in or with significant exposure to countries experiencing economic, financial and other difficulties, the value and liquidity of the Fund's investments may be negatively affected by the conditions in the countries experiencing the difficulties.

Europe—Recent Events. In a referendum held in June 2016 (known as "Brexit"), the United Kingdom ("UK") voted to leave the EU. As a result of the political divisions within the UK and between the UK and the EU that the referendum vote has highlighted and the uncertain consequences of a Brexit, the UK and European economies and the broader global economy

could be significantly impacted, which may result in increased volatility and illiquidity, and potentially lower economic growth on markets in the UK, Europe and globally that could potentially have an adverse effect on the value of the Fund's investments.

Foreign Currency Exposure

The Fund, under normal circumstances, may invest in foreign currencies and in the securities of foreign issuers which are denominated in foreign currencies and may temporarily hold uninvested cash in bank deposits in foreign currencies. Accordingly, the strength or weakness of the U.S. dollar against such foreign currencies may impact the Fund's investment performance. The rate of exchange between the U.S. dollar and other currencies is determined by several factors, including the supply and demand for particular currencies, central bank efforts to support particular currencies, government intervention, speculation, the relative movement of interest rates, the pace of business activity in other countries and the United States, speculation and other economic and financial conditions affecting the world economy.

A decline in the value of any particular currency against the U.S. dollar will cause a decline in the U.S. dollar value of the fund's holdings of securities and cash denominated in such currency and, therefore, will cause an overall decline in the fund's net asset value ("NAV") and any net investment income and capital gains derived from such securities to be distributed in U.S. dollars to shareholders of the fund. Moreover, if the value of the foreign currencies in which the Fund receives its income falls relative to the U.S. dollar between receipt of the income and its conversion to U.S. dollars, the Fund may be required to liquidate securities in order to make distributions if it has insufficient cash in U.S. dollars to meet distribution requirements.

Fluctuations in currency exchange rates may affect the performance of emerging market issuers in which the Fund invests without regard to the effect such fluctuations have on income received or gains realized by the fund. Given the level of foreign-denominated debt owed by many emerging market countries, fluctuating exchange rates significantly affect the debt service obligations of those countries. This could, in turn, affect local interest rates, profit margins and exports which are a major source of foreign exchange earnings. Although it might be theoretically possible to hedge for anticipated income and gains, the ongoing and indeterminate nature of the foregoing risk (and the costs associated with hedging transactions) makes it virtually impossible to hedge effectively against such risks.

Foreign Currency Exchange-Related Securities and Warrants

Foreign currency warrants entitle the holder to receive from their issuer an amount of cash (generally, for warrants issued in the United States, in U.S. dollars) that is calculated pursuant to a predetermined formula and based on the exchange rate between a specified foreign currency and the U.S. dollar as of the exercise date of the warrant. Foreign currency warrants generally are exercisable upon their issuance and expire as of a specified date and time. Foreign currency warrants have been issued in connection with U.S. dollar-denominated debt offerings by major corporate issuers in an attempt to reduce the foreign currency exchange risk that is inherent in the international fixed income/debt marketplace. The formula used to determine the amount payable upon exercise of a foreign currency warrant may make the warrant worthless unless the applicable foreign currency exchange rate moves in a particular direction.

Foreign currency warrants are severable from the debt obligations with which they may be offered and may be listed on exchanges. Foreign currency warrants may be exercisable only in certain minimum amounts, and an investor wishing to exercise warrants who possesses less than the minimum number required for exercise may be required either to sell the warrants or to purchase additional warrants, thereby incurring additional transaction costs. In the case of any exercise of warrants, there may be a time delay between the time a holder of warrants gives instructions to exercise and the time the exchange rate relating to exercise is determined, during which time the exchange rate could change significantly, thereby affecting both the market and cash settlement values of the warrants being exercised.

The expiration date of the warrants may be accelerated if the warrants are delisted from an exchange or if their trading is suspended permanently, which would result in the loss of any remaining "time value" of the warrants (i.e., the difference between the current market value and the exercise value of the warrants) and, in the case where the warrants were "out-of-the-money," in a total loss of the purchase price of the warrants. Warrants are generally unsecured obligations of their issuers and are not standardized foreign currency options issued by the Options Clearing Corporation ("OCC"). Unlike foreign currency options issued by the OCC, the terms of foreign currency warrants generally will not be amended in the event of governmental or regulatory actions affecting exchange rates or in the event of the imposition of other regulatory controls affecting the international currency markets. The initial public offering price of foreign currency warrants is generally considerably in excess of the price that a commercial user of foreign currencies might pay in the interbank market for a comparable option involving significantly larger amounts of foreign currencies. Foreign currency warrants are subject to significant foreign exchange risk, including risks arising from complex political and economic factors.

Zero Coupon, Pay-In-Kind and Deferred Interest Bonds

Corporate debt securities and municipal obligations include so-called “zero coupon” bonds, “pay-in-kind” bonds and “deferred interest” bonds. Zero coupon bonds are issued at a significant discount from their principal amount in lieu of paying interest periodically. Pay-in-kind bonds allow the issuer, at its option, to make current interest payments on the bonds either in cash or in additional bonds. Deferred interest bonds are debt obligations which are issued or purchased at a significant discount from face value and provide for a period of delay before the regular payment of interest begins. The value of these types of bonds is subject to greater fluctuation in response to changes in market interest rates than bonds which make regular payments of interest. These types of bonds allow an issuer to avoid the need to generate cash to meet current interest payments. Accordingly, such bonds may involve greater credit risks than bonds which make regular payments of interest. Even though zero coupon and pay-in-kind bonds do not pay current interest in cash, the Fund is required to accrue interest income on such investments and may be required to distribute that income at least annually to shareholders. Thus, the Fund could be required at times to liquidate other investments in order to satisfy its dividend requirements. The Fund also accrues income on these securities prior to receipt for accounting purposes. To the extent it is deemed collectible, accrued income is taken into account when calculating the value of these securities and the Fund’s net asset value per share, in accordance with the Fund’s valuation policies.

Warrants or Rights

The Fund may purchase warrants and rights. Warrants or rights may be acquired separately, or as part of a unit or attached to securities at the time of purchase, and may be deemed to be with or without value. Warrants and rights may be considered speculative in that they have no voting rights, pay no dividends, and have no rights with respect to the assets of the corporation issuing them. Warrants and rights basically are options to purchase equity securities at a specific price valid for a specific period of time. They do not represent ownership of the securities, but only the right to buy them. Warrants and rights differ from call options in that warrants are issued by the issuer of the security which may be purchased on their exercise, whereas call options may be written or issued by anyone. Rights are similar to warrants but typically are issued by a company to existing holders of its stock and provide those holders the right to purchase additional shares of stock at a later date. Rights also normally have a shorter duration than warrants. The prices of warrants and rights do not necessarily move parallel to the prices of the underlying securities. If the market price of the underlying security does not exceed the exercise price of the warrant or right plus the cost thereof before the expiration date, the Fund could sustain losses on transactions in warrants that would require the Fund to forgo a portion or all of the benefits of advantageous change in the market price of the underlying security. Warrants may be purchased with values that vary depending on the change in value of one or more specified indexes (“index warrants”). Index warrants are generally issued by banks or other financial institutions and give the holder the right, at any time during the term of the warrant, to receive upon exercise of the warrant a cash payment from the issuer based on the value of the underlying index at the time of the exercise. The market for warrants or rights may be very limited and it may be difficult to sell them promptly at an acceptable price.

Indexed Securities

The Fund may purchase various fixed income and debt securities whose principal value or rate of return is linked or indexed to relative exchange rates among two or more currencies or linked to commodities prices or other financial indicators. Such securities may be more volatile than the underlying instruments, resulting in a leveraging effect on the fund. The value of such securities may fluctuate in response to changes in the index, market conditions and the creditworthiness of the issuer. These securities may vary directly or inversely with the underlying instruments. The value of such securities may change significantly if their principal value or rate of return is linked or indexed to relative exchange rates involving a foreign currency for which there is not a readily available market.

Inflation-Indexed Securities

Inflation-indexed bonds are fixed income securities whose principal value is periodically adjusted according to the rate of inflation. Two structures are common. The U.S. Treasury and some other issuers use a structure that accrues inflation into the principal value of the bond. Most other issuers pay out the index-based accruals as part of a semiannual coupon. The Fund may also invest in inflation-indexed securities with other structures or characteristics as such securities become available in the market. It is currently expected that other types of inflation-indexed securities would have characteristics similar to those described below.

The values of inflation-indexed fixed income securities generally fluctuate in response to changes in real interest rates (approximately nominal interest rates minus the inflation rate). Therefore, if inflation rates were to rise faster than nominal interest rates, the value of inflation-indexed securities would likely increase. In contrast, if nominal interest rates increased faster than the inflation rate, the value of inflation-indexed securities would likely decrease. The principal value of inflation-indexed securities declines in periods of deflation, and holder of such securities may experience a loss. If inflation is lower than expected during the period the Fund holds an inflation-indexed security, the Fund may earn less on the security than on a conventional bond. The Fund may invest in inflation-related bonds which do not provide a guarantee of principal. If a

guarantee of principal is not provided, the adjusted principal value of the bond repaid at maturity may be less than the original principal amount.

Any increase in principal value caused by an increase in the index the inflation-indexed securities is tied to is taxable in the year the increase occurs, even though the Fund will not receive the adjusted principal amount until the bond matures. Thus, the Fund could be required to sell other securities to pay taxes on this unrealized income, including when it is not advantageous to do so. If interest rates rise due to reasons other than inflation (for example, due to changes in currency exchange rates), investors in these securities may not be protected to the extent that the increase is not reflected in the bond's inflation measure.

U.S. Treasury Inflation-Protected Securities ("TIPS") are fixed income securities issued by the U.S. Department of the Treasury, the principal amounts of which are adjusted daily based upon changes in the rate of inflation (currently represented by the non-seasonally adjusted Consumer Price Index for All Urban Consumers ("CPI-U"), calculated with a three-month lag). The CPI-U is a measurement of changes in the cost of living, made up of components such as housing, food, transportation and energy. Inflation-indexed bonds issued by a non-U.S. government are generally adjusted to reflect a comparable inflation index, calculated by that government. There can be no assurance that the CPI-U or any non-U.S. inflation index will accurately measure the real rate of inflation in the prices of goods and services. In addition, there can be no assurance that the rate of inflation in a non-U.S. country will be correlated to the rate of inflation in the United States.

TIPS have maturities of five, ten or thirty years, although it is possible that securities with other maturities will be issued in the future. TIPS pay interest on a semi-annual basis, equal to a fixed percentage of the inflation-adjusted principal amount. The interest rate on these bonds is fixed at issuance, but over the life of the bond this interest may be paid on an increasing or decreasing principal value that has been adjusted for inflation.

Repayment of the original bond principal upon maturity (as adjusted for inflation) is guaranteed for TIPS, even during a period of deflation. However, because the principal amount of TIPS would be adjusted downward during a period of deflation, the fund is subject to deflation risk with respect to its investments in these securities. In addition, the current market value of the bonds is not guaranteed and will fluctuate. If the Fund purchases TIPS in the secondary market whose principal values have been adjusted upward due to inflation since issuance, the fund may experience a loss if there is a subsequent period of deflation.

Repurchase Agreements

When cash is temporarily available, or for temporary defensive purposes, the Fund may invest without limit in repurchase agreements and money market instruments, including high-quality short-term debt securities. A repurchase agreement is an agreement under which either U.S. Government obligations or other high-quality liquid debt securities are acquired from a securities dealer or bank subject to resale at an agreed-upon price and date. The securities are held for the Fund by a custodian bank as collateral until resold and will be supplemented by additional collateral if necessary to maintain a total value equal to or in excess of the value of the repurchase agreement. The Fund bears a risk of loss if the other party to a repurchase agreement defaults on its obligations and the Fund is delayed or prevented from exercising its rights to dispose of the collateral securities, which may decline in value in the interim. The Fund will enter into repurchase agreements only with financial institutions determined by the Adviser to present minimal risk of default during the term of the agreement.

Repurchase agreements are usually for a term of one week or less but may be for longer periods. Repurchase agreements maturing in more than seven days may be considered illiquid.

Reverse Repurchase Agreements

The Fund may enter into reverse repurchase agreements. A reverse repurchase agreement has the characteristics of a secured borrowing by the Fund and creates leverage in the Fund's portfolio. In a reverse repurchase transaction, the Fund sells a portfolio instrument to another person, such as a financial institution or broker/dealer, in return for cash. At the same time, the Fund agrees to repurchase the instrument at an agreed-upon time and at a price that is greater than the amount of cash that the Fund received when it sold the instrument, representing the equivalent of an interest payment by the fund for the use of the cash. During the term of the transaction, the Fund will continue to receive any principal and interest payments (or the equivalent thereof) on the underlying instruments.

The Fund may engage in reverse repurchase agreements as a means of raising cash to satisfy redemption requests or for other temporary or emergency purposes. Unless otherwise limited in the Prospectus or this SAI, the Fund may also engage in reverse repurchase agreements to the extent permitted by its fundamental investment policies in order to raise additional cash to be invested by the Fund's portfolio managers in other securities or instruments in an effort to increase the Fund's investment returns.

During the term of the transaction, the Fund will remain at risk for any fluctuations in the market value of the instruments subject to the reverse repurchase agreement as if it had not entered into the transaction. When the Fund reinvests the proceeds of a reverse repurchase agreement in other securities, the Fund will also be at risk for any fluctuations in the market value of the securities in which the proceeds are invested. Like other leveraging risks, this makes the value of an investment in the Fund more volatile and increases the Fund's overall investment exposure. In addition, if the Fund's return on its investment of the proceeds of the reverse repurchase agreement does not equal or exceed the implied interest that it is obligated to pay under the reverse repurchase agreement, engaging in the transaction will lower the Fund's return.

When the Fund enters into a reverse repurchase agreement, it is subject to the risk that the buyer under the agreement may file for bankruptcy, become insolvent or otherwise default on its obligations to the Fund. In the event of a default by the counterparty, there may be delays, costs and risks of loss involved in the Fund's exercising its rights under the agreement, or those rights may be limited by other contractual agreements or obligations or by applicable law.

In addition, the Fund may be unable to sell the instruments subject to the reverse repurchase agreement at a time when it would be advantageous to do so, or may be required to liquidate portfolio securities at a time when it would be disadvantageous to do so in order to make payments with respect to its obligations under a reverse repurchase agreement. This could adversely affect the co-portfolio managers' strategy and result in lower Fund returns. At the time the Fund enters into a reverse repurchase agreement, the Fund is required to set aside cash or other appropriate liquid securities in the amount of the Fund's obligation under the reverse repurchase agreement or take certain other actions in accordance with SEC guidelines, which may affect the Fund's liquidity and ability to manage its assets. Although complying with SEC guidelines would have the effect of limiting the amount of Fund assets that may be committed to reverse repurchase agreements and other similar transactions at any time, it does not otherwise mitigate the risks of entering into reverse repurchase agreements.

The Fund will not engage in reverse repurchase agreements if its total borrowings exceed 33-1/3% of its total assets.

Dollar Rolls

The Fund may enter into dollar roll transactions in which the Fund sells a fixed income security for delivery in the current month and simultaneously contracts to purchase substantially similar (same type, coupon and maturity) securities at an agreed upon future time. By engaging in a dollar roll transaction, the Fund forgoes principal and interest paid on the security that is sold, but receives the difference between the current sales price and the forward price for the future purchase. The Fund would also be able to invest the proceeds of the securities sold.

When the Fund reinvests the proceeds of a dollar roll in other securities, any fluctuations in the market value of either the securities transferred to another party (in the case of a reverse repurchase agreement) the securities purchased for future delivery (in the case of a dollar roll) or the securities in which the proceeds are invested (in either case) would affect the market value of the fund's assets. As a result, such transactions could increase fluctuation in the fund's NAV. If the Fund reinvests the proceeds of the dollar roll at a rate lower than the cost of the dollar roll, engaging in the dollar roll will lower the Fund's yield.

To avoid potential leveraging effects of dollar rolls, the Fund will segregate cash or other appropriate liquid securities with a value at least equal to the Fund's obligation under the dollar rolls.

Leverage

In accordance with its fundamental and non-fundamental policies, the Fund may employ "leverage" by borrowing money and using it to purchase additional securities. Leverage increases both investment opportunity and investment risk. If the investment gains on the securities purchased with borrowed money exceed the interest and other costs of borrowing, the NAV of the Fund's shares will rise faster than would otherwise be the case. On the other hand, if the investment gains fail to cover the cost of borrowings, or if there are losses, the NAV of the Fund's shares will decrease faster than would otherwise be the case. To reduce its borrowing, the Fund might be required to sell securities at a disadvantageous time. The Fund will incur interest expense on any money borrowed, and the Fund may therefore have little or no investment income during periods of substantial borrowings. The Fund will leverage its assets when, in the Adviser's judgment, the potential benefits of the borrowing outweigh the risk and expense of the borrowing.

Loan Participations and Assignment

The Fund may invest in loans. Loans are fixed and floating rate loans arranged through private negotiations between a company or a non-U.S. government and one or more financial institutions (lenders). In connection with purchasing participations, the Fund generally will have no right to enforce compliance by the borrower with the terms of the loan agreement relating to the loan, nor any rights of set-off against the borrower, and the Fund may not benefit directly from any collateral supporting the loan in which it has purchased the participation. As a result, the Fund will assume the credit risk of

both the borrower and the lender that is selling the participation. When the Fund purchases assignments from lenders, the Fund will acquire direct rights against the borrower on the loan, however the Fund may have difficulty enforcing these rights. Loans may not be fully collateralized and can decline significantly in value. If a borrower becomes insolvent, access to collateral may be limited by bankruptcy and other laws. Borrowers that are in bankruptcy may pay only a small portion of the amount owed, if they are able to pay at all. If a secured loan is foreclosed, there is a possibility that the Fund will become the owner of its pro rata share of the collateral, and thus will be required to bear the costs of liabilities associated with owning and disposing of the collateral. In addition, under legal theories of lender liability, the Fund potentially might be held liable as a co-lender. Some loans are unsecured. If the borrower defaults on an unsecured loan, the Fund will be a general creditor and will not have rights to any specific assets of the borrower. The Fund may have difficulty disposing of loans because, in certain cases, the market for such instruments is not highly liquid. The lack of a highly liquid secondary market may have an adverse impact on the value of such instruments and on the Fund's ability to dispose of the loan in response to a specific economic event, such as deterioration in the creditworthiness of the borrower.

Financial Instruments

General. The Fund may utilize options, futures contracts (sometimes referred to as "futures"), options on futures contracts, forward contracts, swaps, caps, floors, collars, indexed securities, various mortgage-related obligations, structured or synthetic financial instruments and other derivative instruments (collectively, "Financial Instruments"). The Fund may use Financial Instruments for any purpose, including as a substitute for other investments, to attempt to enhance its portfolio's return or yield and to alter the investment characteristics of its portfolio (including to attempt to mitigate risk of loss in some fashion, or "hedge"). Except as otherwise provided in the Prospectus, this SAI or by applicable law, the Fund may purchase and sell any type of Financial Instrument. The Fund may choose not to make use of derivatives for a variety of reasons, and no assurance can be given that any derivatives strategy employed will be successful.

The U.S. government is in the process of adopting and implementing regulations governing derivatives markets, including mandatory clearing of certain derivatives, margin and reporting requirements. The ultimate impact of the regulations remains unclear. Additional regulation of derivatives may make them more costly, may limit their availability, may disrupt markets or may otherwise adversely affect their value or performance.

The use of Financial Instruments may be limited by applicable law and any applicable regulations of the Securities and Exchange Commission (the "SEC"), the Commodity Futures Trading Commission (the "CFTC"), or the exchanges on which some Financial Instruments may be traded. (Note, however, that some Financial Instruments that the fund may use may not be listed on any exchange and may not be regulated by the SEC or the CFTC.) In addition, the Fund's ability to use Financial Instruments may be limited by tax considerations.

In addition to the instruments and strategies discussed in this section, the Adviser may discover additional opportunities in connection with Financial Instruments and other similar or related techniques. These opportunities may become available as the Adviser develops new techniques, as regulatory authorities change the types of permitted transactions and as new Financial Instruments or other techniques are developed. The Adviser may utilize these opportunities and techniques to the extent that they are consistent with the Fund's investment objective and permitted by its investment limitations and applicable regulatory authorities. These opportunities and techniques may involve risks different from or in addition to those summarized herein.

This discussion is not intended to limit the Fund's investment flexibility, unless such a limitation is expressly stated, and therefore will be construed by the Fund as broadly as possible. Statements concerning what the Fund may do are not intended to limit any other activity. Also, as with any investment or investment technique, even when the Prospectus or this discussion indicates that the Fund may engage in an activity, it may not actually do so for a variety of reasons, including cost considerations.

Summary of Certain Risks. The use of Financial Instruments involves special considerations and risks, certain of which are summarized below, and may result in losses to the Fund. In general, the use of Financial Instruments may increase the volatility of the Fund and may involve a small investment of cash relative to the magnitude of the risk or exposure assumed. Even a small investment in derivatives may magnify or otherwise increase investment losses to the Fund. As noted above, there can be no assurance that any derivatives strategy will succeed.

- Financial Instruments are subject to the risk that the market value of the derivative itself or the market value of underlying instruments will change in a way adverse to the Fund's interest. Many Financial Instruments are complex, and successful use of them depends in part upon the Adviser's ability to forecast correctly future market trends and other financial or economic factors or the value of the underlying security, index, interest rate or, currency or other instrument or measure. Even if the Adviser's forecasts are correct, other factors may cause distortions or

dislocations in the markets that result in unsuccessful transactions. Financial Instruments may behave in unexpected ways, especially in abnormal or volatile market conditions.

- The Fund may be required to maintain assets as “cover,” maintain segregated accounts, post collateral or make margin payments when it takes positions in Financial Instruments. Assets that are segregated or used as cover, margin or collateral may be required to be in the form of cash or liquid securities, and typically may not be sold while the position in the Financial Instrument is open unless they are replaced with other appropriate assets. If markets move against the Fund’s position, the Fund may be required to maintain or post additional assets and may have to dispose of existing investments to obtain assets acceptable as collateral or margin. This may prevent it from pursuing its investment objective. Assets that are segregated or used as cover, margin or collateral typically are invested, and these investments are subject to risk and may result in losses to the Fund. These losses may be substantial, and may be in addition to losses incurred by using the Financial Instrument in question. If the Fund is unable to close out its positions, it may be required to continue to maintain such assets or accounts or make such payments until the positions expire or mature, and the Fund will continue to be subject to investment risk on the assets. In addition, the Fund may not be able to recover the full amount of its margin from an intermediary if that intermediary were to experience financial difficulty. Segregation, cover, margin and collateral requirements may impair the Fund’s ability to sell a portfolio security or make an investment at a time when it would otherwise be favorable to do so, or require the Fund to sell a portfolio security or close out a derivatives position at a disadvantageous time or price.
- The Fund’s ability to close out or unwind a position in a Financial Instrument prior to expiration or maturity depends on the existence of a liquid market or, in the absence of such a market, the ability and willingness of the other party to the transaction (the “counterparty”) to enter into a transaction closing out the position. If there is no market or the Fund is not successful in its negotiations, the Fund may not be able to sell or unwind the derivative position at a particular time or at an anticipated price. This may also be the case if the counterparty to the Financial Instrument becomes insolvent. The Fund may be required to make delivery of portfolio securities or other assets underlying a Financial Instrument in order to close out a position or to sell portfolio securities or assets at a disadvantageous time or price in order to obtain cash to close out the position. While the position remains open, the Fund continues to be subject to investment risk on the Financial Instrument. The Fund may or may not be able to take other actions or enter into other transactions, including hedging transactions, to limit or reduce its exposure to the Financial Instrument.
- Certain Financial Instruments transactions may have a leveraging effect on the Fund, and adverse changes in the value of the underlying security, index, interest rate, currency or other instrument or measure can result in losses substantially greater than the amount invested in the Financial Instrument itself. When the Fund engages in transactions that have a leveraging effect, the value of the Fund is likely to be more volatile and all other risks also are likely to be compounded. This is because leverage generally magnifies the effect of any increase or decrease in the value of an asset and creates investment risk with respect to a larger pool of assets than the Fund would otherwise have. Certain Financial Instruments have the potential for unlimited loss, regardless of the size of the initial investment.
- Many Financial Instruments may be difficult to value, which may result in increased payment requirements to counterparties or a loss of value to the Fund.
- Liquidity risk exists when a particular Financial Instrument is difficult to purchase or sell. If a derivative transaction is particularly large or if the relevant market is illiquid, the Fund may be unable to initiate a transaction or liquidate a position at an advantageous time or price. Certain Financial Instruments, including certain over-the-counter (“OTC”) options and swaps, may be considered illiquid and therefore subject to the Fund’s limitation on illiquid investments.
- In a hedging transaction there may be imperfect correlation, or even no correlation, between the identity, price or price movements of a Financial Instrument and the identity, price or price movements of the investments being hedged. This lack of correlation may cause the hedge to be unsuccessful and may result in the Fund incurring substantial losses and/or not achieving anticipated gains. Even if the strategy works as intended, the Fund might have been in a better position had it not attempted to hedge at all.
- Financial Instruments used for non-hedging purposes may result in losses which would not be offset by increases in the value of portfolio holdings or declines in the cost of securities or other assets to be acquired. In the event that the Fund uses a Financial Instrument as an alternative to purchasing or selling other investments or in order to

obtain desired exposure to an index or market, the Fund will be exposed to the same risks as are incurred in purchasing or selling the other investments directly, as well as the risks of the transaction itself.

- Certain Financial Instruments involve the risk of loss resulting from the insolvency or bankruptcy of the counterparty or the failure by the counterparty to make required payments or otherwise comply with the terms of the contract. In the event of default by a counterparty, the Fund may have contractual remedies pursuant to the agreements related to the transaction, which may be limited by applicable law in the case of the counterparty's bankruptcy.
- Financial Instruments involve operational risk. There may be incomplete or erroneous documentation or inadequate collateral or margin, or transactions may fail to settle. For Financial Instruments not guaranteed by an exchange or clearinghouse, the Fund may have only contractual remedies in the event of a counterparty default, and there may be delays, costs or disagreements as to the meaning of contractual terms and litigation in enforcing those remedies.
- Certain Financial Instruments transactions, including certain options, swaps, forward contracts, and certain options on foreign currencies, are entered into directly by the counterparties or through financial institutions acting as market makers (OTC derivatives), rather than being traded on exchanges or in markets registered with the CFTC or the SEC. Many of the protections afforded to exchange participants will not be available to participants in OTC derivatives transactions. For example, OTC derivatives transactions are not subject to the guarantee of an exchange, and only OTC derivatives that are either required to be cleared or submitted voluntarily for clearing to a clearinghouse will enjoy the protections that central clearing provides against default by the original counterparty to the trade. In an OTC derivatives transaction that is not cleared, the Fund bears the risk of default by its counterparty. In a cleared derivatives transaction, the Fund is instead exposed to the risk of default of the clearinghouse and the risk of default of the broker through which it has entered into the transaction. Information available on counterparty creditworthiness may be incomplete or outdated, thus reducing the ability to anticipate counterparty defaults.
- Financial Instruments transactions conducted outside the United States may not be conducted in the same manner as those entered into on U.S. exchanges, and may be subject to different margin, exercise, settlement or expiration procedures. Many of the risks of OTC derivatives transactions are also applicable to Financial Instruments used outside the United States. Financial Instruments used outside the United States also are subject to the risks affecting foreign securities, currencies and other instruments.
- Financial Instruments involving currency are subject to additional risks. Currency related transactions may be negatively affected by government exchange controls, blockages, and manipulations. Exchange rates may be influenced by factors extrinsic to a country's economy. Also, there is no systematic reporting of last sale information with respect to foreign currencies. As a result, the information on which trading in currency derivatives is based may not be as complete as, and may be delayed beyond, comparable data for other transactions.
- Use of Financial Instruments involves transaction costs, which may be significant. Use of Financial Instruments also may increase the amount of taxable income to shareholders.

Financial Instruments and Hedging. The Fund may use Financial Instruments for hedging purposes. Hedging strategies can be broadly categorized as "short hedges" and "long hedges." A short hedge is a purchase or sale of a Financial Instrument intended partially or fully to offset potential declines in the value of one or more investments held in the Fund's portfolio. Thus, in a short hedge the Fund takes a position in a Financial Instrument whose price is expected to move in the opposite direction of the price of the investment being hedged.

Conversely, a long hedge is a purchase or sale of a Financial Instrument intended partially or fully to offset potential increases in the acquisition cost of one or more investments that the fund intends to acquire. Thus, in a long hedge, the Fund takes a position in a Financial Instrument whose price is expected to move in the same direction as the price of the prospective investment being hedged. A long hedge is sometimes referred to as an anticipatory hedge. In an anticipatory hedge transaction, the Fund does not own a corresponding security and, therefore, the transaction does not relate to a security the fund owns. Rather, it relates to a security that the Fund intends to acquire. If the Fund does not complete the hedge by purchasing the security it anticipated purchasing, the effect on the Fund's portfolio is the same as if the transaction were entered into for speculative purposes.

Financial Instruments on securities generally are used to attempt to hedge against price movements in one or more particular securities positions that the Fund owns or intends to acquire. Financial Instruments on indices, in contrast, generally are used to attempt to hedge against price movements in market sectors in which the Fund has invested or expects to invest. Financial Instruments on debt securities may be used to hedge either individual securities or broad debt market sectors.

Special Risks. The use of Financial Instruments involves special considerations and risks, certain of which are described below. In general, these techniques may increase the volatility of the Fund and may involve a small investment of cash relative to the magnitude of the risk assumed. Risks pertaining to particular Financial Instruments are described in the sections that follow.

1) Successful use of most Financial Instruments depends upon the Adviser's ability to predict movements of the overall securities, currency and interest rate markets, which requires different skills than predicting changes in the prices of individual securities. There can be no assurance that any particular strategy will succeed, and use of Financial Instruments could result in a loss, regardless of whether the intent was to reduce risk or increase return.

2) When Financial Instruments are used for hedging purposes, there might be an imperfect correlation, or even no correlation, between price movements of a Financial Instrument and price movements of the investments being hedged. For example, if the value of a Financial Instrument used in a short hedge increased by less than the decline in value of the hedged investment, the hedge would not be fully successful. Such a lack of correlation might occur due to factors unrelated to the value of the investments being hedged, such as speculative or other pressures on the markets in which Financial Instruments are traded. The effectiveness of hedges using Financial Instruments on indices will depend on the degree of correlation between price movements in the index and price movements in the securities or other assets being hedged.

Because there are a limited number of types of exchange-traded Financial Instruments, it is likely that the standardized contracts available will not match the Fund's current or anticipated investments exactly. The Fund may invest in Financial Instruments based on securities with different issuers, maturities or other characteristics from the securities in which it typically invests, which involves a risk that the position in Financial Instruments will not track the performance of the Fund's other investments.

Prices of Financial Instruments can also diverge from the prices of their underlying instruments, even if the underlying instruments match the Fund's investments well. Prices of Financial Instruments are affected by such factors as current and anticipated short-term interest rates, changes in volatility of the underlying instrument and the time remaining until expiration of the contract, which may not affect security prices the same way. Imperfect correlation may also result from differing levels of demand in the markets for Financial Instruments and the securities markets, from structural differences in how Financial Instruments and securities are traded, or from the imposition of daily price fluctuation limits or trading halts. The Fund may purchase or sell Financial Instruments with a greater or lesser value than the securities it wishes to hedge or intends to purchase in order to attempt to compensate for differences in volatility between the contract and the securities, although this may not be successful in all cases. If price changes in the Fund's positions in Financial Instruments are poorly correlated with its other investments, the positions may fail to produce anticipated gains or result in losses that are not offset by gains in other investments.

3) If successful, the above-discussed hedging strategies can reduce risk of loss by wholly or partially offsetting the negative effect of unfavorable price movements. However, such strategies can also reduce opportunity for gain by offsetting the positive effect of favorable price movements. For example, if the Fund entered into a short hedge because its adviser projected a decline in the price of a security in the Fund's portfolio, and the price of that security increased instead, the gain from that increase might be wholly or partially offset by a decline in the price of the Financial Instrument. Moreover, if the price of the Financial Instrument declined by more than the increase in the price of the security, the Fund could suffer a loss. In either such case, the Fund would have been in a better position had it not attempted to hedge at all.

4) As described below, the Fund might be required to maintain segregated assets as "cover," or make margin payments when it takes positions in Financial Instruments involving obligations to third parties (i.e., Financial Instruments other than purchased options). If the Fund were unable to close out its positions in such Financial Instruments, it might be required to continue to maintain such assets or accounts or make such payments until the position expired or matured. These requirements might impair the Fund's ability to sell a portfolio security or make an investment at a time when it would otherwise be favorable to do so, or require that the Fund sell a portfolio security at a disadvantageous time.

5) The Fund's ability to close out a position in a Financial Instrument prior to expiration or maturity depends on the existence of a liquid secondary market or, in the absence of such a market, the ability and willingness of the other party to the transaction (the "counterparty") to enter into a transaction closing out the position. Therefore, there is no assurance that any position can be closed out at a time and price that is favorable to the Fund.

Cover. Transactions using Financial Instruments, other than purchased options, expose the Fund to an obligation to another party. The fund will not enter into any such transactions unless it owns either (1) an offsetting ("covering") position in securities, currencies or other options, futures contracts or forward contracts, or (2) cash and liquid assets held in a

segregated account, or designated on the fund's books as segregated for this purpose, with a value, marked-to-market daily, sufficient to cover its potential obligations to the extent not covered as provided in (1) above. The Fund will comply with SEC guidelines regarding cover for these instruments and will, if the guidelines so require, segregate cash or liquid assets in the prescribed amount as determined daily.

Assets used as cover cannot be sold while the position in the corresponding Financial Instrument is open, unless they are replaced with other appropriate assets. As a result, the commitment of a large portion of the Fund's assets for cover or segregation could impede portfolio management or the Fund's ability to meet redemption requests or other current obligations.

Options

A call option gives the purchaser the right to buy, and obligates the writer to sell, the underlying investment at the agreed-upon price during the option period. A put option gives the purchaser the right to sell, and obligates the writer to buy, the underlying investment at the agreed-upon price during the option period. Purchasers of options pay an amount, known as a premium, to the option writer in exchange for the right under the option contract.

The purchase of call options can serve as a long hedge, and the purchase of put options can serve as a short hedge. Writing put or call options can enable the Fund to enhance income or yield by reason of the premiums paid by the purchasers of such options. However, the Fund may also suffer a loss as the result of writing options. For example, if the market price of the security underlying a put option declines to less than the exercise price of the option, minus the premium received, the Fund would suffer a loss.

Writing call options can serve as a limited short hedge, because declines in the value of the hedged investment would be offset to the extent of the premium received for writing the option. However, if the security or currency appreciates to a price higher than the exercise price of the call option, it can be expected that the option will be exercised and the Fund will be obligated to sell the security or currency at less than its market value. If the call option is an OTC option, the securities or other assets used as cover may be considered illiquid.

Writing put options can serve as a limited long hedge because increases in the value of the hedged investment would be offset to the extent of the premium received for writing the option. However, if the security or currency depreciates to a price lower than the exercise price of the put option, it can be expected that the put option will be exercised and the fund will be obligated to purchase the security or currency at more than its market value. If the put option is an OTC option, the securities or other assets used as cover may be considered illiquid.

The value of an option position will reflect, among other things, the current market value of the underlying investment, the time remaining until expiration, the relationship of the exercise price to the market price of the underlying investment, the historical price volatility of the underlying investment and general market conditions. The exercise price of the options may be below, equal to or above the current market value of the underlying security or other instrument. Options that expire unexercised have no value, and the fund will realize a loss in the amount of the premium paid and any transaction costs.

The Fund may effectively terminate its right or obligation under an option by entering into a closing transaction. For example, the Fund may terminate its obligation under a call or put option that it had written by purchasing an identical call or put option; this is known as a closing purchase transaction. Conversely, the Fund may terminate a position in a put or call option it had purchased by writing an identical put or call option; this is known as a closing sale transaction. Closing transactions permit the Fund to realize profits or limit losses on an option position prior to its exercise or expiration.

A type of put that the Fund may purchase is an "optional delivery standby commitment," which is entered into by parties selling debt securities to the Fund. An optional delivery standby commitment gives the Fund the right to sell the security back to the seller on specified terms. This right is provided as an inducement to purchase the security.

The Fund may purchase and write covered straddles on securities, currencies or bond indices. A long straddle is a combination of a call and a put option purchased on the same security, index or currency where the exercise price of the put is less than or equal to the exercise price of the call. The Fund would enter into a long straddle when its adviser believes that it is likely that interest rates or currency exchange rates will be more volatile during the term of the options than the option pricing implies. A short straddle is a combination of a call and a put written on the same security, index or currency where the exercise price of the put is less than or equal to the exercise price of the call. In a covered short straddle, the same issue of security or currency is considered cover for both the put and the call that the Fund has written. The Fund would enter into a short straddle when the Adviser believes that it is unlikely that interest rates or currency exchange rates will be as volatile during the term of the options as the option pricing implies. In such cases, the Fund will segregate cash and/or appropriate liquid securities equivalent in value to the amount, if any, by which the put is "in-the-money," that is, the

amount by which the exercise price of the put exceeds the current market value of the underlying security. Straddles involving currencies are subject to the same risks as other foreign currency options.

Risks of Options on Securities. Options offer large amounts of leverage, which will result in the Fund's NAV being more sensitive to changes in the value of the related instrument. The fund may purchase or write both exchange-traded and OTC options. Exchange-traded options in the United States are issued by a clearing organization affiliated with the exchange on which the option is listed that, in effect, guarantees completion of every exchange-traded option transaction. In contrast, OTC options are contracts between the Fund and its counterparty (usually a securities dealer or a bank) with no clearing organization guarantee. Thus, when the Fund purchases an OTC option, it relies on the counterparty from whom it purchased the option to make or take delivery of the underlying investment upon exercise of the option. Failure by the counterparty to do so would result in the loss of any premium paid by the Fund as well as the loss of any expected benefit of the transaction.

The Fund's ability to establish and close out positions in exchange-listed options depends on the existence of a liquid market. However, there can be no assurance that such a market will exist at any particular time. Closing transactions can be made for OTC options only by negotiating directly with the counterparty, or by a transaction in the secondary market if any such market exists. There can be no assurance that the Fund will in fact be able to close out an OTC option position at a favorable price prior to expiration. In the event of insolvency of the counterparty, the Fund might be unable to close out an OTC option position at any time prior to its expiration, if at all.

If the Fund were unable to effect a closing transaction for an option it had purchased, due to the absence of a secondary market, the imposition of price limits or otherwise, it would have to exercise the option to realize any profit. The inability to enter into a closing transaction for a covered call option written by the Fund could leave the Fund unable to prevent material losses because the Fund would be unable to sell the investment used as cover for the written option until the option expires or is exercised.

OTC Options. Unlike exchange-traded options, which are standardized with respect to the underlying instrument, expiration date, contract size and strike price, the terms of OTC options (options not traded on exchanges) generally are established through negotiation with the other party to the option contract. While this type of arrangement allows the Fund great flexibility to tailor the option to its needs, OTC options generally involve greater risk than exchange-traded options, which are guaranteed by the clearing organization of the exchanges where they are traded. Assets used as cover for OTC options may be considered illiquid as described under "Illiquid Investments and Restricted Securities."

European-style options are only exercisable immediately prior to their expiration. This is in contrast to American-style options, which are exercisable at any time prior to the expiration date of the option.

Options on Indices. Puts and calls on indices are similar to puts and calls on securities or futures contracts except that all settlements are in cash and gain or loss depends on changes in the index in question rather than on price movements in individual securities or futures contracts. When the Fund writes a call on an index, it receives a premium and agrees that, prior to the expiration date, the purchaser of the call, upon exercise of the call, will receive from the Fund an amount of cash if the closing level of the index upon which the call is based is greater than the exercise price of the call. The amount of cash is equal to the difference between the closing price of the index and the exercise price of the call times a specified multiple ("multiplier"), which determines the total dollar value for each point of such difference. When the Fund buys a call on an index, it pays a premium and has the same rights as to such call as are indicated above. When the Fund buys a put on an index, it pays a premium and has the right, prior to the expiration date, to require the seller of the put, upon the Fund's exercise of the put, to deliver to the Fund an amount of cash if the closing level of the index upon which the put is based is less than the exercise price of the put, which amount of cash is determined by the multiplier, as described above for calls. When the Fund writes a put on an index, it receives a premium and the purchaser of the put has the right, prior to the expiration date, to require the Fund to deliver to it an amount of cash equal to the difference between the closing level of the index and exercise price times the multiplier if the closing level is less than the exercise price.

Risks of Options on Indices. The risks of investment in options on indices may be greater than options on securities. Because index options are settled in cash, when the Fund writes a call on an index it cannot provide in advance for its potential settlement obligations by acquiring and holding the underlying securities. The Fund can offset some of the risk of writing a call index option by holding a diversified portfolio of securities similar to those on which the underlying index is based. However, the Fund cannot, as a practical matter, acquire and hold a portfolio containing exactly the same securities as underlie the index and, as a result, bears a risk that the value of the securities held will vary from the value of the index.

Even if the Fund could assemble a portfolio that exactly reproduced the composition of the underlying index, it still would not be fully covered from a risk standpoint because of the “timing risk” inherent in writing index options. When an index option is exercised, the amount of cash that the holder is entitled to receive is determined by the difference between the exercise price and the closing index level on the date when the option is exercised. As with other kinds of options, the Fund as the call writer will not learn that the Fund has been assigned until the next business day at the earliest. The time lag between exercise and notice of assignment poses no risk for the writer of a covered call on a specific underlying security, such as common stock, because there the writer’s obligation is to deliver the underlying security, not to pay its value as of a fixed time in the past. So long as the writer already owns the underlying security, it can satisfy its settlement obligations by simply delivering it, and the risk that its value may have declined since the exercise date is borne by the exercising holder. In contrast, even if the writer of an index call holds securities that exactly match the composition of the underlying index, it will not be able to satisfy its assignment obligations by delivering those securities against payment of the exercise price. Instead, it will be required to pay cash in an amount based on the closing index value on the exercise date. By the time it learns that it has been assigned, the index may have declined, with a corresponding decline in the value of its portfolio. This “timing risk” is an inherent limitation on the ability of index call writers to cover their risk exposure by holding securities positions.

If the Fund has purchased an index option and exercises it before the closing index value for that day is available, it runs the risk that the level of the underlying index may subsequently change. If such a change causes the exercised option to fall out-of-the-money, the Fund will be required to pay the difference between the closing index value and the exercise price of the option (times the applicable multiplier) to the assigned writer.

Futures Contracts and Options on Futures Contracts

A financial futures contract sale creates an obligation by the seller to deliver the type of Financial Instrument called for in the contract in a specified delivery month for a stated price. A financial futures contract purchase creates an obligation by the purchaser to take delivery of the type of Financial Instrument called for in the contract in a specified delivery month at a stated price. Options on futures give the purchaser the right to assume a position in a futures contract at the specified option exercise price at any time during the period of the option. The purchase of futures or call options on futures can serve as a long hedge, and the sale of futures or the purchase of put options on futures can serve as a short hedge. Writing call options on futures contracts can serve as a limited short hedge, using a strategy similar to that used for writing call options on securities or indices. Similarly, writing put options on futures contracts can serve as a limited long hedge. Futures contracts and options on futures contracts can also be purchased and sold to attempt to enhance income or yield.

In addition, futures strategies can be used to manage the average duration of the Fund’s fixed income portfolio. If the Adviser wishes to shorten the average duration of the Fund’s fixed income portfolio, the Fund may sell a debt futures contract or a call option thereon, or purchase a put option on that futures contract. If the Adviser wishes to lengthen the average duration of the Fund’s fixed income portfolio, the Fund may buy a debt futures contract or a call option thereon, or sell a put option thereon.

No price is paid upon entering into a futures contract. Instead, at the inception of a futures contract the Fund is required to deposit “initial margin” in an amount generally equal to 10% or less of the contract value. Margin must also be deposited when writing a call or put option on a futures contract, in accordance with applicable exchange rules. Unlike margin in securities transactions, initial margin on futures contracts does not represent a borrowing, but rather is in the nature of a performance bond or good-faith deposit that is returned to the Fund at the termination of the transaction if all contractual obligations have been satisfied. Under certain circumstances, such as periods of high volatility, the Fund may be required by an exchange to increase the level of its initial margin payment, and initial margin requirements might be increased generally in the future by regulatory action. Because of the low margin deposits required, futures trading involves an extremely high degree of leverage; as a result, a relatively small price movement in a futures contract may result in immediate and substantial loss, or gain, to the investor.

Initial margin with respect to a futures or option on futures contract is the amount of assets that must be deposited by the Fund with, or for the benefit of, a futures commission merchant to initiate the Fund’s futures or option positions. Initial margin is the margin deposit made by the Fund when it enters into a futures or option contract; it is intended to assure performance of the contract by the Fund. If the value of the Fund’s account declines by a specified amount, the Fund will receive a margin call and be required to post assets sufficient to restore the equity in the account to the initial margin level. This is sometimes referred to as “variation margin.” Subsequent “variation margin” payments are made to and from the futures commission merchant as the value of the account varies, a process known as “marking-to-market.” Variation margin does not involve borrowing, but rather represents a settlement of the Fund’s obligations to or from a futures commission merchant. When the Fund purchases an option on a futures contract, the premium paid plus transaction costs is all that is at risk. However, there may be circumstances when the purchase of an option on a futures contract would result in a loss to the Fund when the use of a futures contract would not, such as when there is no movement in the value of the securities or currencies

being hedged. In contrast, when the Fund purchases or sells a futures contract or writes a call or put option thereon, it is subject to daily variation margin calls that could be substantial in the event of adverse price movements. If the Fund has insufficient cash to meet daily variation margin requirements, it might need to sell securities at a time when such sales are disadvantageous.

Purchasers and sellers of futures contracts and options on futures can enter into offsetting closing transactions, similar to closing transactions on options, by selling or purchasing, respectively, an instrument identical to the instrument purchased or sold. Positions in futures and options on futures may be closed only on an exchange or board of trade that provides a secondary market. However, there can be no assurance that a liquid secondary market will exist for a particular contract at a particular time. In such event, it may not be possible to close a futures contract or options position.

Under certain circumstances, futures exchanges may establish daily limits on the amount that the price of a futures contract or an option on a futures contract can vary from the previous day's settlement price; once that limit is reached, no trades may be made that day at a price beyond the limit. Daily price limits do not limit potential losses because prices could move to the daily limit for several consecutive days with little or no trading, thereby preventing liquidation of unfavorable positions.

If the Fund were unable to liquidate a futures contract or an option on a futures position due to the absence of a liquid secondary market, the imposition of price limits or otherwise, it could incur substantial losses. The Fund would continue to be subject to market risk with respect to the position. In addition, except in the case of purchased options, the Fund would continue to be required to make daily variation margin payments and might be required to maintain the position being hedged by the future or option or to segregate cash or securities (or designate these assets on its books as segregated).

Risks of Futures Contracts and Options Thereon. Successful use of futures contracts and related options depends upon the ability of the Adviser to assess movements in the direction of overall securities and interest rates, which requires different skills and techniques than assessing the value of individual securities. Moreover, futures contracts relate not to the current price level of the underlying instrument, but to the anticipated price level at some point in the future; trading of stock index futures may not reflect the trading of the securities that are used to formulate the index or even actual fluctuations in the index itself. There is, in addition, the risk that movements in the price of the futures contract will not correlate with the movements in the prices of the securities being hedged. Price distortions in the marketplace, such as resulting from increased participation by speculators in the futures market, may also impair the correlation between movements in the prices of futures contracts and movements in the prices of the hedged securities. If the price of the futures contract moves less than the price of securities that are the subject of the hedge, the hedge will not be fully effective; but if the price of the securities being hedged has moved in an unfavorable direction, the Fund would be in a better position than if it had not hedged at all. If the price of the securities being hedged has moved in a favorable direction, this advantage may be partially offset by losses on the futures position.

Options have a limited life and thus can be disposed of only within a specific time period. Positions in futures contracts may be closed out only on an exchange or board of trade that provides a secondary market for such futures contracts. Although the Fund intends to purchase and sell futures only on exchanges or boards of trade where there appears to be a liquid secondary market, there is no assurance that such a market will exist for any particular contract at any particular time. In such event, it may not be possible to close a futures position and, in the event of adverse price movements, the Fund would continue to be required to make variation margin payments.

Purchasers of options on futures contracts pay a premium in cash at the time of purchase which, in the event of adverse price movements, could be lost. Sellers of options on futures contracts must post initial margin and are subject to additional margin calls that could be substantial in the event of adverse price movements. Because of the low margin deposits required, futures trading involves an extremely high degree of leverage; as a result, a relatively small price movement in a futures contract may result in immediate and substantial loss, or gain, to the investor.

The exchanges may impose limits on the amount by which the price of a futures contract or related option is permitted to change in a single day. If the price of a contract moves to the limit for several consecutive days, the Fund may be unable during that time to close its position in that contract and may have to continue making payments of variation margin. The Fund may also be unable to dispose of securities or other instruments being used as "cover" during such a period.

Index Futures. The Fund may invest in index futures to attempt to increase its return or to attempt to hedge its investments. When index futures are used for hedging purposes, the risk of imperfect correlation between movements in the price of index futures and movements in the price of the securities that are the subject of the hedge increases as the composition of the fund's portfolio diverges from the securities included in the applicable index. The price of the index futures may move more than or less than the price of the securities being hedged. If the price of the index futures moves less than the price of the securities that are the subject of the hedge, the hedge will not be fully effective but, if the price of the securities being

hedged has moved in an unfavorable direction, the fund would be in a better position than if it had not hedged at all. If the price of the securities being hedged has moved in a favorable direction, this advantage will be partially offset by the futures contract. If the price of the futures contract moves more than the price of the securities, the Fund will experience either a loss or a gain on the futures contract that will not be completely offset by movements in the price of the securities that are the subject of the hedge. To compensate for the imperfect correlation of movements in the price of the securities being hedged and movements in the price of the index futures, the Fund may buy or sell index futures in a greater dollar amount than the dollar amount of the securities being hedged if the historical volatility of the prices of such securities being hedged is more than the historical volatility of the prices of the securities included in the index. It is also possible that, where the Fund has sold index futures contracts to hedge against decline in the market, the overall market may advance and the value of the particular securities held in the fund's portfolio may decline. If this occurred, the Fund would lose money on the futures contract and also experience a decline in value of its portfolio securities. However, while this could occur for a very brief period or to a very small degree, over time the value of a diversified portfolio of securities will tend to move in the same direction as the market indices on which the futures contracts are based.

Where index futures are purchased to hedge against a possible increase in the price of securities before the Fund is able to invest in them in an orderly fashion, it is possible that the market may decline instead. If the Fund then concludes not to invest in them at that time because of concern as to possible further market decline or for other reasons, it will realize a loss on the futures contract that is not offset by a reduction in the price of the securities it had anticipated purchasing.

Additional Risks of Financial Instruments Traded on Foreign Exchanges

Financial Instruments may be traded on foreign exchanges. Such transactions may not be regulated as effectively as similar transactions in the United States, may not involve a clearing mechanism and related guarantees and are subject to the risk of governmental actions affecting trading in, or the price of, foreign securities. The value of such positions also could be adversely affected by (1) other complex foreign political, legal and economic factors, (2) lesser availability than in the United States of data on which to make trading decisions, (3) delays in the Fund's ability to act upon economic events occurring in foreign markets during non-business hours in the United States, (4) the imposition of different exercise and settlement terms and procedures and margin requirements than in the United States and (5) lesser trading volume.

Foreign Currency Investments – Special Considerations

The Fund may use options and futures contracts on foreign currencies (including the euro), as described above, and forward currency contracts and swap agreements, as described below, to attempt to increase the Fund's return or to attempt to hedge against movements in the values of the foreign currencies in which the Fund's securities are denominated or to attempt to enhance the Fund's return or yield. The Fund may also use such investments to attempt to establish a short position or to access a market that is more difficult to access with other types of investments, such as bonds or currency.

Currency hedges can protect against price movements in a security that the Fund owns or intends to acquire that are attributable to changes in the value of the currency in which it is denominated. Such hedges do not, however, protect against price movements in the securities that are attributable to other causes. The Fund may, however, determine not to hedge particular risks, and the Fund may be completely unhedged at any point in time.

The Fund might seek to hedge against changes in the value of a particular currency when no Financial Instruments on that currency are available or such Financial Instruments are more expensive than certain other Financial Instruments. In such cases, the Fund may seek to hedge against price movements in that currency by entering into transactions using Financial Instruments on another currency or a basket of currencies, the value of which the Adviser believes will have a high degree of positive correlation to the value of the currency being hedged. The risk that movements in the price of the Financial Instrument will not correlate perfectly with movements in the price of the currency subject to the hedging transaction is magnified when this strategy is used.

The value of Financial Instruments on foreign currencies depends on the value of the underlying currency relative to the U.S. dollar. Because foreign currency transactions occurring in the interbank market might involve substantially larger amounts than those involved in the use of such Financial Instruments, the fund could be disadvantaged by having to deal in the odd lot market (generally consisting of transactions of less than \$1 million) for the underlying foreign currencies at prices that are less favorable than for round lots.

There is no systematic reporting of last sale information for foreign currencies or any regulatory requirement that quotations available through dealers or other market sources be firm or revised on a timely basis. Quotation information generally is representative of very large transactions in the interbank market and thus might not reflect odd-lot transactions where rates might be less favorable. The interbank market in foreign currencies is a global, round-the-clock market. To the extent the U.S. options or futures markets are closed while the markets for the underlying currencies remain open, significant price

and rate movements might take place in the underlying markets that cannot be reflected in the markets for the Financial Instruments until they reopen.

Settlement of hedging transactions involving foreign currencies might be required to take place within the country issuing the underlying currency. Thus, the Fund might be required to accept or make delivery of the underlying foreign currency in accordance with any U.S. or foreign regulations regarding the maintenance of foreign banking arrangements by U.S. residents and might be required to pay any fees, taxes and charges associated with such delivery assessed in the issuing country.

Forward Currency Contracts

The Fund may enter into forward currency contracts to purchase or sell foreign currencies for a fixed amount of U.S. dollars or another foreign currency. A forward currency contract involves an obligation to purchase or sell a specific currency at a future date, which may be any fixed number of days (term) from the date of the forward currency contract agreed upon by the parties, at a price set at the time of the forward currency contract. These forward currency contracts are traded directly between currency traders (usually large commercial banks) and their customers.

Such transactions may serve as long hedges; for example, the Fund may purchase a forward currency contract to lock in the U.S. dollar price of a security denominated in a foreign currency that the Fund intends to acquire. Forward currency contract transactions may also serve as short hedges; for example, the Fund may sell a forward currency contract to lock in the U.S. dollar equivalent of the proceeds from the anticipated sale of a security, dividend or interest payment denominated in a foreign currency.

The Fund may also use forward currency contracts to hedge against a decline in the value of existing investments denominated in foreign currency. For example, if the Fund owned securities denominated in euros, it could enter into a forward currency contract to sell euros in return for U.S. dollars to hedge against possible declines in the euro's value. Such a hedge, sometimes referred to as a "position hedge," would tend to offset both positive and negative currency fluctuations, but would not offset changes in security values caused by other factors. The Fund could also hedge the position by selling another currency expected to perform similarly to the euro. This type of hedge, sometimes referred to as a "proxy hedge," could offer advantages in terms of cost, yield or efficiency, but generally would not hedge currency exposure as effectively as a simple hedge into U.S. dollars. Proxy hedges may result in losses if the currency used to hedge does not perform similarly to the currency in which the hedged securities are denominated. The Fund could, in fact, lose money on both legs of the hedge, i.e., between the euro and proxy currency, and between the proxy currency and the dollar.

The Fund also may use forward currency contracts to attempt to enhance return or yield. The Fund could use forward currency contracts to increase its exposure to foreign currencies that the Adviser believes might rise in value relative to the U.S. dollar, or shift its exposure to foreign currency fluctuations from one country to another. For example, if the Fund owned securities denominated in a foreign currency and the Adviser believed that currency would decline relative to another currency, it might enter into a forward currency contract to sell an appropriate amount of the first foreign currency, with payment to be made in the second foreign currency.

The cost to the Fund of engaging in forward currency contracts varies with factors such as the currency involved, the length of the contract period and the market conditions then prevailing. Because forward currency contracts are usually entered into on a principal basis, no fees or commissions are involved. When the Fund enters into a forward currency contract, it relies on the counterparty to make or take delivery of the underlying currency at the maturity of the contract. Failure by the counterparty to do so would result in the loss of any expected benefit of the transaction.

As is the case with futures contracts, parties to forward currency contracts can enter into offsetting closing transactions, similar to closing transactions on futures contracts, by selling or purchasing, respectively, an instrument identical to the instrument purchased or sold. Secondary markets generally do not exist for forward currency contracts, with the result that closing transactions generally can be made for forward currency contracts only by negotiating directly with the counterparty. Thus, there can be no assurance that the Fund will in fact be able to close out a forward currency contract at a favorable price prior to maturity. In addition, in the event of insolvency of the counterparty, the Fund might be unable to close out a forward currency contract at any time prior to maturity. In either event, the Fund would continue to be subject to market risk with respect to the position, and would continue to be required to maintain a position in securities denominated in the foreign currency or to maintain cash or liquid assets in an account.

The precise matching of forward currency contract amounts and the value of the securities involved generally will not be possible because the value of such securities, measured in the foreign currency, will change after the forward currency contract has been established. Thus, the Fund might need to purchase or sell foreign currencies in the spot (i.e., cash) market to the extent such foreign currencies are not covered by forward currency contracts. The projection of short-term

currency market movements is extremely difficult, and the successful execution of a short-term hedging strategy is highly uncertain.

Successful use of forward currency contracts depends on an adviser's skill in analyzing and predicting currency values. Forward currency contracts may substantially change the Fund's exposure to changes in currency exchange rates and could result in losses to the Fund if currencies do not perform as the Adviser anticipates. There is no assurance that the Adviser's use of forward currency contracts will be advantageous to the Fund or that the Adviser will hedge at an appropriate time.

Forward currency contracts in which the Fund may engage include foreign exchange forwards. The consummation of a foreign exchange forward requires the actual exchange of the principal amounts of the two currencies in the contract (i.e., settlement on a physical basis). Forward currency contracts in which the fund may engage also include non-deliverable forwards ("NDFs"). NDFs are cash-settled, short-term forward contracts on foreign currencies (each a "Reference Currency") that are non-convertible and that may be thinly traded or illiquid. NDFs involve an obligation to pay an amount (the "Settlement Amount") equal to the difference between the prevailing market exchange rate for the Reference Currency and the agreed upon exchange rate (the "NDF Rate"), with respect to an agreed notional amount. NDFs have a fixing date and a settlement (delivery) date. The fixing date is the date and time at which the difference between the prevailing market exchange rate and the agreed upon exchange rate is calculated. The settlement (delivery) date is the date by which the payment of the Settlement Amount is due to the party receiving payment.

Although NDFs are similar to foreign exchange forwards, NDFs do not require physical delivery of the Reference Currency on the settlement date. Rather, on the settlement date, the only transfer between the parties is the monetary settlement amount representing the difference between the NDF Rate and the prevailing market exchange rate. NDFs typically may have terms from one month up to two years and are settled in U.S. dollars.

NDFs are subject to many of the risks associated with derivatives in general and forward currency transactions, including risks associated with fluctuations in foreign currency and the risk that the counterparty will fail to fulfill its obligations. Although NDFs have historically been traded OTC, in the future, pursuant to the Dodd-Frank Act, they may be exchange-traded. Under such circumstances, they will be centrally cleared and a secondary market for them will exist. With respect to NDFs that are centrally-cleared, an investor could lose margin payments it has deposited with the clearing organization as well as the net amount of gains not yet paid by the clearing organization if the clearing organization breaches its obligations under the NDF, becomes insolvent or goes into bankruptcy. In the event of bankruptcy of the clearing organization, the investor may be entitled to the net amount of gains the investor is entitled to receive plus the return of margin owed to it only in proportion to the amount received by the clearing organization's other customers, potentially resulting in losses to the investor. Even if some NDFs remain traded OTC, they will be subject to margin requirements for uncleared swaps and counterparty risk common to other swaps, as discussed below.

Foreign exchange forwards, as defined in the Dodd-Frank Act and described above, should not be considered swaps for most purposes according to a Treasury Department determination. However, as mandated by the Dodd-Frank Act and set forth in CFTC regulations adopted thereunder foreign exchange forwards must be reported to a swap data repository, and swap dealers and major swap participants who are party to such transactions remain subject to the business conduct standards pertaining to swaps in connection with foreign exchange forwards. In addition, if a foreign exchange forward were to be listed and traded on or subject to the rules of a designated contract market or swap execution facility, or cleared by a derivatives clearing organization, the antifraud and antimanipulation prohibitions of the Dodd-Frank Act would apply to such transactions. NDFs are classified as swaps and are therefore subject to the full panoply of regulations under the Dodd-Frank Act.

Combined Positions

The Fund may purchase and write options in combination with each other, or in combination with futures or forward contracts, to adjust the risk and return characteristics of its overall position. For example, the Fund may purchase a put option and write a call option on the same underlying instrument, in order to construct a combined position whose risk and return characteristics are similar to selling a futures contract. Another possible combined position would involve writing a call option at one strike price and buying a call option at a lower price, in order to reduce the risk of the written call option in the event of a substantial price increase. Because combined options positions involve multiple trades, they result in higher transaction costs and may be more difficult to open and close out.

Turnover

The Fund's options and futures activities may affect its turnover rate and brokerage commission payments. The exercise of calls or puts written by the Fund, and the sale or purchase of futures contracts, may cause it to sell or purchase related investments, thus increasing its turnover rate. Once the Fund has received an exercise notice on an option it has written, it

cannot effect a closing transaction in order to terminate its obligation under the option and must deliver or receive the underlying securities at the exercise price. The exercise of puts purchased by the Fund may also cause the sale of related investments, also increasing turnover; although such exercise is within the Fund's control, holding a protective put might cause it to sell the related investments for reasons that would not exist in the absence of the put. The Fund will pay a brokerage commission each time it buys or sells a put or call or purchases or sells a futures contract. Such commissions may be higher than those that would apply to direct purchases or sales.

The portfolio turnover rate is computed by dividing the lesser of purchases or sales of securities for the period by the average value of portfolio securities for that period. Short-term securities are excluded from the calculation. Variations in the Fund's portfolio turnover rate from year to year may be due to a fluctuating volume of shareholder purchase and redemption orders or market conditions.

Structured Notes and Indexed Securities

Structured notes are derivative debt instruments, the interest rate or principal of which is determined by an unrelated indicator (for example, a currency, security or index thereof). The terms of the instrument may be "structured" by the purchaser and the borrower issuing the note. Indexed securities may include structured notes as well as securities other than debt securities, the interest rate or principal of which is determined by an unrelated indicator. Indexed securities may include a multiplier that multiplies the indexed element by a specified factor and, therefore, the value of such securities may be very volatile. The terms of structured notes and indexed securities may provide that in certain circumstances no principal is due at maturity, which may result in a loss of invested capital. Structured notes and indexed securities may be positively or negatively indexed, so that appreciation of the unrelated indicator may produce an increase or a decrease in the interest rate or the value of the structured note or indexed security at maturity may be calculated as a specified multiple of the change in the value of the unrelated indicator. Therefore, the value of such notes and securities may be very volatile. Structured notes and indexed securities may entail a greater degree of market risk than other types of debt securities because the investor bears the risk of the unrelated indicator. Structured notes or indexed securities also may be more volatile, less liquid and more difficult to accurately price than less complex securities and instruments or more traditional debt securities.

Swaps, Caps, Floors and Collars

The Fund may enter into swaps, caps, floors and collars to attempt to increase or preserve a return or a spread on a particular investment or portion of its portfolio, to protect against any increase in the price of securities the fund anticipates purchasing at a later date. A swap involves the exchange by the Fund with another party of their respective commitments to pay or receive cash flows, e.g., an exchange of floating rate payments for fixed-rate payments. The purchase of a cap entitles the purchaser, to the extent that a specified index exceeds a predetermined value, to receive payments on a notional principal amount from the party selling the cap. The purchase of a floor entitles the purchaser, to the extent that a specified index falls below a predetermined value, to receive payments on a notional principal amount from the party selling the floor. A collar combines elements of buying a cap and a floor.

Swap agreements, including caps, floors and collars, can be individually negotiated and structured to include exposure to a variety of different types of investments (such as individual securities, baskets of securities and securities indices) or market factors (such as those listed below). Depending on their structure, swap agreements may increase or decrease the overall volatility of the fund's investments and its share price and yield because, and to the extent, these agreements affect the Fund's exposure to long- or short-term interest rates (in the United States or abroad), foreign currency values, mortgage-backed security values, corporate borrowing rates or other factors such as security prices or inflation rates.

Swap agreements will tend to shift the Fund's investment exposure from one type of investment to another. For example, if the Fund agrees to exchange payments in U.S. dollars for payments in foreign currency, the swap agreement would tend to decrease the Fund's exposure to U.S. interest rates and increase its exposure to foreign currency and interest rates. Caps and floors have an effect similar to buying or writing options.

The creditworthiness of firms with which the Fund enters into swaps, caps, floors or collars will be monitored by the Adviser. If a firm's creditworthiness declines, the value of the agreement would be likely to decline, potentially resulting in losses. Changing conditions in a particular market area, such as those recently experienced in the subprime mortgage market, whether or not directly related to the referenced assets that underlie the swap agreement, may have an adverse impact on the creditworthiness of the counterparty. For example, the counterparty may have experienced losses as a result of its exposure to the subprime market that adversely affect its creditworthiness. If a default occurs by the other party to such transaction, the Fund may have contractual remedies pursuant to the agreements related to the transaction.

As a result of the Dodd-Frank Act, certain swap agreements may be cleared through a clearinghouse and traded on an exchange or swap execution facility. New regulations could, among other things, increase the costs of swap transactions.

The net amount of the excess, if any, of the Fund's obligations over its entitlements with respect to each swap will be accrued on a daily basis and an amount of cash or liquid assets having an aggregate NAV at least equal to the accrued excess will be maintained in an account with the Fund's custodian that satisfies the requirements of the 1940 Act. The Fund will also establish and maintain such accounts with respect to its total obligations under any swaps that are not entered into on a net basis and with respect to any caps or floors that are written by the Fund. Such covered obligations are not considered senior securities under the 1940 Act and, accordingly, the Fund and Adviser will not treat them as being subject to the Fund's restrictions on borrowing or senior securities.

Total Return Swaps. Total return swaps are contracts in which one party agrees to make periodic payments based on the change in market value of the underlying assets, which may include a specified security, basket of securities or security indexes during the specified period, in return for periodic payments based on a fixed or variable interest rate or the total return from other underlying assets. Alternatively, a total return swap can be structured so that one party will make payments to the other party if the value of an underlying asset increases, but receive payments from the other party if the value of that instrument decreases. Total return swap agreements may be used to obtain exposure to a security or market without owning or taking physical custody of such security or market.

Inflation Swaps. Inflation swaps are contracts in which one party agrees to pay the cumulative percentage increase in a price index, such as the Consumer Price Index, over the term of the swap (with some lag on the referenced inflation index), and the other party pays a compounded fixed rate. Inflation swaps can be designated as zero coupon, whereby both sides of the swap compound interest over the life of the swap and then the accrued interest is paid out only at the swap's maturity. The value of inflation swap agreements is expected to change in response to changes in real interest rates. Real interest rates are tied to the relationship between nominal interest rates and the rate of inflation. If nominal interest rates increase at a faster rate than inflation, real interest rates may rise, leading to a decrease in value of an inflation swap agreement.

Credit Default Swaps. The Fund may enter into credit default swap contracts for investment purposes and to add leverage to its investment portfolio. As the seller in a credit default swap contract, the Fund would be required to pay the par (or other agreed-upon) value of a referenced debt obligation to the counterparty in the event of a default by a third party, such as a U.S. or non-U.S. corporate issuer, on the debt obligation. In return, the Fund would receive from the counterparty a periodic stream of payments over the term of the contract provided that no event of default has occurred. If no default occurs, the Fund would keep the stream of payments and would have no payment obligations. As the seller, the Fund would effectively add leverage to its portfolio because, in addition to its net assets, the Fund would be subject to investment exposure on the swap. Credit default swap contracts involve special risks and may result in losses to the Fund. Credit default swaps may in some cases be illiquid, and they increase credit risk since the Fund has exposure to both the issuer of the referenced obligation and the counterparty to the credit default swap.

The Fund may invest in credit default swap index products that provide exposure to multiple credit default swaps. The Fund can either buy the index (take on credit exposure) or sell the index (pass credit exposure to a counterparty). Such investments are subject to the associated risk with investments in credit default swaps discussed above.

Commodity Exchange Act

The Adviser, on behalf of the Fund, has claimed an exclusion, granted to operators of registered investment companies like the Fund, from registration as a "commodity pool operator" with respect to the Fund under the Commodity Exchange Act (the "CEA"), and, therefore, the Adviser is not subject to registration or regulation with respect to the Fund under the CEA. As a result, the Fund is limited in its ability to trade instruments subject to the CFTC's jurisdiction, including commodity futures (which include futures on broad-based securities indexes, interest rate futures and currency futures), options on commodity futures, certain swaps or other investments (whether directly or indirectly through investments in other investment vehicles).

Under this exclusion, the Fund must satisfy one of the following two trading limitations whenever it enters into a new commodity trading position: (1) the aggregate initial margin and premiums required to establish the Fund's positions in CFTC-regulated instruments may not exceed 5% of the liquidation value of the Fund's portfolio (after accounting for unrealized profits and unrealized losses on any such investments); or (2) the aggregate net notional value of such instruments, determined at the time the most recent position was established, may not exceed 100% of the liquidation value of the Fund's portfolio (after accounting for unrealized profits and unrealized losses on any such positions). The Fund would not be required to consider its exposure to such instruments if they were held for "bona fide hedging" purposes, as such term is defined in the rules of the CFTC. In addition to meeting one of the foregoing trading limitations, the Fund may not market itself as a commodity pool or otherwise as a vehicle for trading in the markets for CFTC-regulated instruments.

Master Limited Partnerships (“MLPs”)

The Fund may invest in MLPs, which are limited partnerships (or similar entities) that are operated by one or more general partners. Limited partners own the remainder of the partnership through limited partnership interests (often referred to as “common units”) and have a limited role in the partnership’s operations and management. Common units generally are registered with the SEC and are publicly traded on U.S. securities exchanges or in the OTC market, and their value generally fluctuates based on prevailing market conditions and the success of the MLP. When investing in an MLP, the Fund intends to purchase publicly traded common units.

Investing in MLPs is subject to the risks applicable to investing in a partnership as compared to a corporation, including fewer protections afforded to investors. For instance, owners of common units in an MLP may have limited voting rights and no ability to elect directors. Unitholders of an MLP generally are limited in their liability, but creditors typically have the right to seek the return of distributions made to unitholders if the liability in question arose before the distributions were paid. This liability may stay attached to the unitholder even after the units are sold.

MLPs generally engage in natural resources-based activities such as the exploration, development, mining, production, processing, refining, transportation, storage and certain marketing of mineral or natural resources, although they may also finance entertainment, research and development and other projects. Investments held by an MLP may be relatively illiquid, limiting the MLP’s ability to vary its portfolio promptly in response to changes in economic or other conditions. In addition, MLPs may have limited financial resources, their securities may trade infrequently and in limited volume and they may be subject to more abrupt or erratic price movements than securities of larger or more broadly-based companies.

Risks involved with investing in an MLP also include the risks associated with the specific industry or industries in which the partnership invests, such as the risks of investing in real estate or oil and gas industries (“Energy Related Risks”). The value of an investment in an MLP may be directly affected by the prices of natural resources commodity prices. The volatility of, and interrelationships between, commodity prices can also indirectly affect certain MLPs due to the potential impact on the volume of commodities transported, processed, stored or distributed. The Fund’s investment in an MLP may be adversely affected by market perceptions that the performance and distributions of MLPs are directly tied to commodity prices. In order to qualify as a RIC for U.S. federal income tax purposes, the Fund may not invest more than 25% of the value of its total assets in the securities of MLPs that are treated as qualified publicly traded partnerships for U.S. federal income tax purposes.

By investing in MLPs, the Fund is exposed to the following underlying Energy-Related Risks:

- fluctuations in commodity prices;
- reduced volumes of natural gas or other energy commodities available for transporting, processing, storing or distributing;
- new construction risk and acquisition risk which can limit potential growth;
- a sustained reduced demand for crude oil, natural gas and refined petroleum products resulting from a recession or an increase in market price or higher taxes;
- depletion of the natural gas reserves or other commodities if not replaced;
- changes in the regulatory environment;
- extreme weather;
- rising interest rates which could result in a higher cost of capital and drive investors into other investment opportunities; and
- threats of attack by terrorists.

Redemption Risk

Investments by Other Funds and by Other Significant Investors. Certain investment companies may invest in the Fund and may at times have substantial investments in the Fund. Other investors also may at times have substantial investments in the Fund. From time to time, the Fund may experience relatively large redemptions or investments due to transactions in Fund shares by a fund or other significant investor. The effects of these transactions could adversely affect the Fund’s performance. In the event of such redemptions or investments, the Fund could be required to sell securities or to invest cash at a time when it is not advantageous to do so. Such transactions may increase brokerage and/or other transaction costs of the Fund. A large redemption could cause the Fund’s expenses to increase and could result in the Fund becoming too small to be economically viable. Redemptions of Fund shares could also accelerate the realization of taxable capital gains in the Fund if sales of securities result in capital gains. The impact of these transactions is likely to be greater when a fund or other significant investor purchases, redeems, or owns a substantial portion of a Fund’s shares.

The Fund may experience periods of heavy redemptions that could cause the Fund to liquidate its assets at inopportune times or at a loss or depressed value, particularly during periods of declining or illiquid markets. Redemption risk is greater to the extent that the Fund has investors with large shareholdings, short investment horizons, or unpredictable cash flow needs. In addition, redemption risk is heightened during periods of overall market turmoil. The redemption by one or more large shareholders of their holdings in the Fund could hurt performance and/or cause the remaining shareholders in the fund to lose money. Further, if one decision maker has control of Fund shares owned by separate Fund shareholders, redemptions by these shareholders may further increase the Fund's redemption risk. If the Fund is forced to liquidate its assets under unfavorable conditions or at inopportune times, the value of your investment could decline.

Cyber Security Risk

Investment companies, such as the Fund, and its service providers may be subject to operational and information security risks resulting from cyber attacks. Cyber attacks include, among other behaviors, stealing or corrupting data maintained online or digitally, denial of service attacks on websites, the unauthorized release of confidential information or various other forms of cyber security breaches. Cyber attacks affecting the Fund or the Adviser, custodian, transfer agent, intermediaries and other third-party service providers may adversely impact the Fund. For instance, cyber attacks may interfere with the processing of shareholder transactions, impact the Fund's ability to calculate its net asset value, cause the release of private shareholder information or confidential company information, impede trading, subject the Fund to regulatory fines or financial losses, and cause reputational damage. The Fund may also incur additional costs for cyber security risk management purposes. Similar types of cyber security risks are also present for issuers of securities in which the Fund invests, which could result in material adverse consequences for such issuers, and may cause the Fund's investment in such portfolio companies to lose value.

Subject to prior disclosure to shareholders, the Board may, in the future, authorize the Fund to invest in securities other than those listed here and in the Prospectus, provided that such investment would be consistent with the Fund's investment objective and that it would not violate any fundamental investment policies or restrictions applicable to the Fund.

Portfolio Turnover

Portfolio securities may be sold without regard to the length of time they have been held when, in the opinion of the Adviser, investment considerations warrant such action. The portfolio turnover rate is calculated by dividing (1) the lesser of purchases or sales of portfolio securities for the fiscal year by (2) the monthly average of the value of portfolio securities owned during the fiscal year. A 100% turnover rate would occur if all the securities in the Fund's portfolio, with the exception of securities whose maturities at the time of acquisition were one year or less, were sold and either repurchased or replaced within one year. A high rate of portfolio turnover (100% or more) generally leads to higher transaction costs and generally reflects a greater number of taxable transactions. High portfolio turnover may result in larger amounts of short-term capital gains which, when distributed to shareholders, are generally taxed at ordinary income tax rates.

For the following fiscal years ended September 30, the Fund's portfolio turnover rates were as follows:

Year*	Portfolio Turnover Rate
2017	52%
2016	53%

* Portfolio turnover rates shown for the period prior to February 27, 2017 are those of the Predecessor Fund.

Portfolio Holdings Policy

The Fund maintains portfolio holdings disclosure policies that govern the timing and circumstances of disclosure to shareholders and third parties of information regarding the portfolio investments held by the Fund. These portfolio holdings disclosure policies have been approved by the Board. Disclosure of the Fund's complete holdings is required to be made quarterly within 60 days of the end of each fiscal quarter in the annual report and semi-annual report to Fund shareholders and in the quarterly holdings report on Form N-Q. These reports are available, free of charge, on the EDGAR database on the SEC's website at www.sec.gov.

Pursuant to the Trust's portfolio holdings disclosure policies, non-public information about the Fund's portfolio holdings generally is not distributed to any person, unless by explicit agreement or by virtue of their respective duties to the Fund, such persons are subject to a duty to maintain the confidentiality of the information disclosed and have a duty not to trade on non-public information. Examples of disclosure by the Trust include instances in which:

- The disclosure is required pursuant to a regulatory request, court order or is legally required in the context of other legal proceedings;
- The disclosure is made to a mutual fund rating and/or ranking organization, or person performing similar functions;
- The disclosure is made to internal parties involved in the investment process, administration, operation or custody of the Fund, including, but not limited to the Fund's administrator, U.S. Bancorp Fund Services, LLC ("USBFS") and the Trust's Board, attorneys, auditors or accountants;
- The disclosure is made: (a) in connection with a quarterly, semi-annual or annual report that is available to the public; or (b) relates to information that is otherwise available to the public; or
- The disclosure is made with the prior written approval of either the Trust's Chief Compliance Officer or his or her designee.

Certain of the persons listed above receive information about the Fund's portfolio holdings on an ongoing basis without lag as part of the normal investment activities of the Fund. The Fund believes that these third parties have legitimate objectives in requesting such portfolio holdings information and operate in the best interest of the Fund's shareholders. These persons include internal parties involved in the investment process, administration, operation or custody of the Funds, specifically: USBFS; the Trust's Board; and the Trust's attorneys and accountants (currently, Morgan, Lewis & Bockius LLP and BBD, LLP, respectively), all of which typically receive such information after it is generated. In no event shall the Adviser, its affiliates or employees, the Fund, or any other party receive any direct or indirect compensation in connection with the disclosure of information about the Fund's holdings.

Portfolio holdings information posted on the Fund's website may be separately provided to any person, after it is first published on the Fund's website. Shareholders can access the Fund's website at www.millervalue.com for additional information about the Fund, including, without limitation, the periodic disclosure of its portfolio holdings.

Any disclosures to additional parties not described above is made with the prior written approval of either the Trust's Chief Compliance Officer or his or her designee, pursuant to the Trust's Policy on Disclosure of Portfolio Holdings.

The Chief Compliance Officer or designated officer of the Trust will approve the furnishing of non-public portfolio holdings to a third party only if they consider the furnishing of such information to be in the best interest of the Fund and its shareholders and if no material conflict of interest exists regarding such disclosure between shareholders interest and those of the Adviser, Distributor or any affiliated person of the Fund. No consideration may be received by the Fund, the Adviser, any affiliate of the Adviser or their employees in connection with the disclosure of portfolio holdings information. The Board receives and reviews annually a list of the persons who receive non-public portfolio holdings information and the purpose for which it is furnished.

Management

The overall management of the Trust's business and affairs is invested with its Board. The Board approves all significant agreements between the Trust and persons or companies furnishing services to it, including the agreements with the Adviser, Administrator, Custodian and Transfer Agent, each as defined below. The day-to-day operations of the Trust are delegated to its officers, subject to each Fund's investment objective, strategies and policies and to the general supervision of the Board. The Trustees and officers of the Trust, their ages, birth dates, and positions with the Trust, terms of office with the Trust and length of time served, their business addresses and principal occupations during the past five years and other directorships held are set forth in the table below.

Eric W. Pinciss, Esq. 615 E. Michigan Street Milwaukee, WI 53202 Year of birth: 1975	Secretary	Since 2015	Vice President, U.S. Bancorp Fund Services, LLC (2012 to present)

- (1) Each Trustee serves an indefinite term until the election of a successor. Each officer serves an indefinite term until the election of a successor.
- (2) The Trust is comprised of numerous series managed by unaffiliated investment advisers. The term “Fund Complex” applies to the Miller Income Fund and Miller Opportunity Trust (offered in a separate Prospectus and SAI) (together the “Miller Value Funds”). The Miller Value Funds do not hold themselves out as related to any other series within the Trust for purposes of investment and investor services, nor do they share the same investment advisor with any other series.
- (3) “Other Directorships Held” includes only directorships of companies required to register or file reports with the SEC under the Securities Exchange Act of 1934, as amended, (that is, “public companies”) or other investment companies registered under the 1940 Act.
- (4) The Trustees of the Trust who are not “interested persons” of the Trust as defined under the 1940 Act (“Independent Trustees”).
- (5) Mr. Martin is an “interested person” of the Trust as defined by the 1940 Act. Mr. Martin is an interested Trustee of the Trust by virtue of the fact that he is an interested person of Quasar Distributors, LLC, the Trust’s distributor.

Additional Information Concerning Our Board of Trustees

Board Leadership Structure

The Board has general oversight responsibility with respect to the operation of the Trust and the Fund. The Board has engaged the Adviser to manage the Fund and is responsible for overseeing the Adviser and other service providers to the Trust and the Fund in accordance with the provisions of the 1940 Act and other applicable laws. The Board has established an Audit Committee to assist the Board in performing its oversight responsibilities.

Given the fact there is only a small number of funds in the Trust, the Trust does not have a lead disinterested trustee. The Chairman of the Board is an “interested person” of the Trust as defined by the 1940 Act. The Trust has determined that its leadership structure is appropriate in light of, among other factors, the asset size and nature of the Trust, the arrangements for the conduct of the Trust’s operations, the number of Trustees, and the responsibilities of the Board.

Board Oversight of Risk

Through its direct oversight role, and indirectly through the Audit Committee, and officers of the Fund and service providers, the Board performs a risk oversight function for the Fund. To effectively perform its risk oversight function, the Board, among other things, performs the following activities: receives and reviews reports related to the performance and operations of the Fund; reviews and approves, as applicable, the compliance policies and procedures of the Fund; approves the Fund’s principal investment policies; adopts policies and procedures designed to deter market timing; meets with representatives of various service providers, including the Adviser, to review and discuss the activities of the Fund and to provide direction with respect thereto; and appoints a chief compliance officer of the Fund who oversees the implementation and testing of the Fund’s compliance program and reports to the Board regarding compliance matters for the Fund and its service providers.

The Trust has an Audit Committee, which plays a significant role in the risk oversight of the Fund as it meets annually with the auditors of the Fund. The Board also meets quarterly with the Fund’s chief compliance officer.

Not all risks that may affect the Fund can be identified nor can controls be developed to eliminate or mitigate their occurrence or effects. It may not be practical or cost effective to eliminate or mitigate certain risks, the processes and controls employed to address certain risks may be limited in their effectiveness, and some risks are simply beyond the reasonable control of the Adviser or other service providers. Moreover, it is necessary to bear certain risks (such as investment-related risks) to

achieve the Fund's goals. As a result of the foregoing and other factors, the Fund's ability to manage risk is subject to substantial limitations.

Trust Committees

The Trust has three standing committees: the Audit Committee, which also serves as the Qualified Legal Compliance Committee ("QLCC"), the Governance and Nominating Committee (the "Nominating Committee"), and the Valuation Committee.

The members of the Audit Committee are Messrs. Chrystal, DiUlio, and Resis each of whom is an Independent Trustee. The primary functions of the Audit Committee are to select the independent registered public accounting firm to be retained to perform the annual audit of the Fund, to review the results of the audit, to review the Fund's internal controls, to approve in advance all permissible non-audit services performed by the independent auditors and to review certain other matters relating to the Fund's independent registered public accounting firm and financial records. In its role as the QLCC, its function is to receive reports from an attorney retained by the Trust of evidence of a material violation by the Trust or by any officer, director, employee or agent of the Trust. During the fiscal year ended September 30, 2017, the Audit Committee met one time in regards to the Fund.

The Nominating Committee, comprised entirely of the Independent Trustees, is responsible for seeking and reviewing candidates for consideration as nominees for Trustees and meets only as necessary. The Nominating Committee will consider nominees nominated by shareholders. Recommendations by shareholders for consideration by the Nominating Committee should be sent to the President of the Trust in writing together with the appropriate biographical information concerning each such proposed Nominee, and such recommendation must comply with the notice provisions set forth in the Trust By-Laws. In general, to comply with such procedures, such nominations, together with all required biographical information, must be delivered to and received by the President of the Trust at the principal executive offices of the Trust not later than 120 days and no more than 150 days prior to the shareholder meeting at which any such nominee would be voted on. During the fiscal year ended September 30, 2017, the Nominating Committee did not meet in regards to the Fund.

The Board has delegated day-to-day valuation issues to a Valuation Committee that is comprised of the Trust's President, Treasurer and Assistant Treasurer and is overseen by the Trustees. The function of the Valuation Committee is to review and oversee each Adviser's valuation of securities held by any series of the Trust for which current and reliable market quotations are not readily available. Such securities are valued at their respective fair values as determined in good faith by the Valuation Committee, and the actions of the Valuation Committee are subsequently reviewed and ratified by the Board. During the fiscal year ended September 30, 2017, the Valuation Committee met one time in regards to the Fund.

Board Oversight of Risk Management

As part of its oversight function, the Board receives and reviews various risk management reports and assessments and discusses these matters with appropriate management and other personnel. Because risk management is a broad concept comprised of many elements (such as, for example, investment risk, issuer and counterparty risk, compliance risk, operational risks, business continuity risks, etc.) the oversight of different types of risks is handled in different ways. For example, the Audit Committee meets regularly with the Chief Compliance Officer to discuss compliance and operational risks. The Audit Committee also meets with the Treasurer and the Trust's independent public accounting firm to discuss, among other things, the internal control structure of the Trust's financial reporting function. The full Board receives reports from the Adviser and portfolio managers as to investment risks as well as other risks that may be also discussed in Audit Committee.

Information about Each Trustee's Qualification, Experience, Attributes or Skills

In addition to the information provided in the table above, below is certain additional information concerning each particular Trustee and certain of their Trustee Attributes. The information provided below, and in the table above, is not all-inclusive. Many Trustee attributes involve intangible elements, such as intelligence, integrity, work ethic, the ability to work together, the ability to communicate effectively, the ability to exercise judgment, the ability to ask incisive questions, and commitment to shareholder interests. In conducting its annual self-assessment, the Board has determined that the Trustees have the appropriate attributes and experience to continue to serve effectively as Trustees of the Trust.

John Chrystal's experience as a partner of an investment management firm and his experience as a partner of a consulting firm advising financial institutions, have provided him with an extensive knowledge of the highly regulated financial services industry, which knowledge he brings to the Board in a relatable, effective way.

Albert J. DiUlio, S.J.'s financing background, combined with his work experience, have provided him with a strong understanding of financial statements and experience addressing the complex issues that confront entities. As a trustee, Mr. DiUlio uses his financial background and experiences to enhance Board discussions with useful information and insights.

Harry Resis' background in fixed income securities analysis, with an emphasis on high yield securities, provides him with a practical knowledge of the underlying markets and strategies used by series in the Trust that will be useful to the Board in their analysis and oversight of the series.

Ian Martin has substantial mutual fund operations and shareholder servicing experience through his position as Executive Vice President and Director of Transfer Agent Operations of U.S. Bancorp Fund Services, LLC, a full service provider to mutual funds, which makes him a valuable resource to the Board as they contemplate shareholder servicing needs.

Each of Messrs. Chrystal, DiUlio, Resis and Martin takes a conservative and thoughtful approach to addressing issues facing the Fund. The combination of skills and attributes discussed above led to the conclusion that each of Messrs. Chrystal, DiUlio, Resis and Martin should serve as a trustee.

Trustee Ownership of Fund Shares and Other Interests

No Trustee owned shares of the Fund as of the calendar year ended December 31, 2017.

As of December 31, 2017, neither the Independent Trustees nor members of their immediate family, own securities beneficially or of record in the Adviser, the Distributor, as defined below, or an affiliate of the Adviser or Distributor. Accordingly, neither the Independent Trustees nor members of their immediate family, have direct or indirect interest, the value of which exceeds \$120,000, in the Adviser, the Distributor or any of their affiliates. In addition, during the two most recently completed calendar years, neither the Independent Trustees nor members of their immediate families have conducted any transactions (or series of transactions) in which the amount involved exceeds \$120,000 and to which the Adviser, the Distributor or any affiliate thereof was a party.

Compensation

Set forth below is the compensation received by the Independent Trustees from the Fund for the fiscal year ended September 30, 2017. The Independent Trustees receive an annual retainer of \$43,000 per year and a fee of \$1,000 for each meeting of the Board of Trustees attended, including special meetings allocated among each of the various portfolios comprising the Trust. The Trustees also receive reimbursement from the Trust for expenses incurred in connection with attendance at meetings. The Trust has no pension or retirement plan. No other entity affiliated with the Trust pays any compensation to the Trustees.

Name of Independent Trustee	Aggregate Compensation from the Fund	Pension or Retirement Benefits Accrued as Part of Fund Expenses	Annual Benefits Upon Retirement	Total Compensation from Fund Complex Paid to Trustees ⁽¹⁾
John Chrystal	\$1,808	None	None	\$3,615
Albert J. DiUlio, S.J.	\$1,808	None	None	\$3,615
Harry Resis	\$1,808	None	None	\$3,615
Name of Interested Trustee				
Ian Martin	\$0	None	None	\$0

⁽¹⁾ There are currently multiple portfolios comprising the Trust. The term "Fund Complex" applies only to the Miller Value Funds. For the fiscal year ended September 30, 2017, aggregate Trustees' fees were in the amount of \$74,865.

General Trust Information

The Declaration of Trust permits the Trustees to issue an unlimited number of full and fractional shares of beneficial interest and to divide or combine the shares into a greater or lesser number of shares without thereby changing the proportionate beneficial interest in the Fund. Each share represents an interest in the Fund proportionately equal to the interest of each other share. Upon the Fund's liquidation, all shareholders would share pro rata in the net assets of the Fund available for distribution to shareholders.

With respect to the Fund, the Trust may offer more than one class of shares. The Trust reserves the right to create and issue additional series or classes. Each share of a series or class represents an equal proportionate interest in that series or class with each other share of that series or class. Currently, the Miller Income Fund offers five share classes, Class A, Class C, Class FI, Class I, and Class IS shares.

The Trust is not required to hold annual meetings of shareholders but will hold special meetings of shareholders of a series or class when, in the judgment of the Trustees, it is necessary or desirable to submit matters for a shareholder vote. Shareholders have, under certain circumstances, the right to communicate with other shareholders in connection with requesting a meeting of shareholders for the purpose of removing one or more Trustees. Shareholders also have, in certain circumstances, the right to remove one or more Trustees without a meeting. No material amendment may be made to the Declaration of Trust without the affirmative vote of the holders of a majority of the outstanding shares of each portfolio affected by the amendment. The Declaration of Trust provides that, at any meeting of shareholders of the Trust or of any series or class, a Shareholder Servicing Agent may vote any shares as to which such Shareholder Servicing Agent is the agent of record and which are not represented in person or by proxy at the meeting, proportionately in accordance with the votes cast by holders of all shares of that portfolio otherwise represented at the meeting in person or by proxy as to which such Shareholder Servicing Agent is the agent of record. Any shares so voted by a Shareholder Servicing Agent will be deemed represented at the meeting for purposes of quorum requirements. Any series or class may be terminated (i) upon the merger or consolidation with, or the sale or disposition of all or substantially all of its assets to, another entity, if approved by the vote of the holders of two thirds of its outstanding shares, except that if the Board recommends such merger, consolidation or sale or disposition of assets, the approval by vote of the holders of a majority of the series' or class' outstanding shares will be sufficient, or (ii) by the vote of the holders of a majority of its outstanding shares, or (iii) by the Board by written notice to the series' or class' shareholders. Unless each series and class is so terminated, the Trust will continue indefinitely.

The Declaration of Trust also provides that the Trust shall maintain appropriate insurance (for example, fidelity bonding and errors and omissions insurance) for the protection of the Trust, its shareholders, Trustees, officers, employees and agents covering possible tort and other liabilities. Thus, the risk of a shareholder incurring financial loss on account of shareholder liability is limited to circumstances in which both inadequate insurance existed and the Trust itself was unable to meet its obligations.

The Declaration of Trust does not require the issuance of stock certificates. If stock certificates are issued, they must be returned by the registered owners prior to the transfer or redemption of shares represented by such certificates.

Rule 18f-2 under the 1940 Act provides that as to any investment company which has two or more series outstanding and as to any matter required to be submitted to shareholder vote, such matter is not deemed to have been effectively acted upon unless approved by the holders of a "majority" (as defined in the Rule) of the voting securities of each series affected by the matter. Such separate voting requirements do not apply to the election of Trustees or the ratification of the selection of accountants. The Rule contains special provisions for cases in which an advisory contract is approved by one or more, but not all, series. A change in investment policy may go into effect as to one or more series whose holders so approve the change even though the required vote is not obtained as to the holders of other affected series.

Codes of Ethics

The Trust, the Adviser and the Distributor, as defined below, have each adopted separate Codes of Ethics under Rule 17j-1 of the 1940 Act. These Codes permit, subject to certain conditions, access persons of the Adviser and Distributor to invest in securities that may be purchased or held by the Fund.

Proxy Voting Policies and Procedures

The Board has adopted Proxy Voting Policies and Procedures (the "Policies") on behalf of the Trust which delegate the responsibility for voting proxies to the Adviser, subject to the Board's continuing oversight. The Policies require that the Adviser vote proxies received in a manner consistent with the best interests of the Fund and its shareholders. The Policies also require the Adviser to present to the Board, at least annually, the Adviser's Policies and a record of each proxy voted by the Adviser on behalf of the Fund, including a report on the resolution of all proxies identified by the Adviser as involving a conflict of interest.

A copy of the Adviser's policies and procedures used to determine how to vote proxies related to portfolio securities can be found in **Appendix B**.

The Trust is required to file a Form N-PX, with the Fund's complete proxy voting record for the 12 months ended June 30, no later than August 31 of each year. The Fund's proxy voting record will be available without charge, upon request, by calling toll-free 1-888-593-5110 and on the SEC's website at www.sec.gov.

Control Persons, Principal Shareholders, and Management Ownership

A principal shareholder is any person who owns of record or beneficially 5% or more of the outstanding shares of the Fund. A control person is one who owns beneficially or through controlled companies more than 25% of the voting securities of a company or acknowledges the existence of control. Shareholders with a controlling interest could affect the outcome of voting or the direction of management of the Fund.

As of January 2, 2018, the following shareholders were considered to be principal shareholders.

Class A

Name and Address	Parent Company	Jurisdiction	% Ownership	Type of Ownership
Morgan Stanley Smith Barney LLC Exclusive Benefit of Customers of MSSB 1300 Thames St, FL 6 Baltimore, MD 21231-3496	NA	NA	27.24%	Record

As of January 2, 2018, the Trustees and officers of the Trust as a group beneficially owned less than 1% of the outstanding shares of any class of the Fund.

The Fund's Investment Adviser

Miller Value Partners, LLC, located at One South Street, Suite 2550, Baltimore, MD 21202, acts as investment adviser to the Fund pursuant to an investment advisory agreement (the "Advisory Agreement") with the Trust. Bill Miller and Applied Philosophy, LLC, each owns more than 25% of the Adviser and each is therefore a control person of the Adviser. Mr. Miller is the Managing Member of Applied Philosophy and controls its operations.

In consideration of the services to be provided by the Adviser pursuant to the Advisory Agreement, the Adviser is entitled to receive from the Miller Income Fund an investment advisory fee computed daily and payable monthly, based on the following fee schedule 0.70% of the first \$2.5 billion of average net assets, 0.675% of the next \$5 billion of average net assets, and 0.65% of average net assets over \$7.5 billion.

After its initial two year term, the Advisory Agreement continues in effect for successive annual periods so long as such continuation is specifically approved at least annually by the vote of (1) the Board (or a majority of the outstanding shares of the Fund), and (2) a majority of the Trustees who are not interested persons of any party to the Advisory Agreement, in each case, cast in person at a meeting called for the purpose of voting on such approval. The Advisory Agreement may be terminated at any time, without penalty, by either party to the Advisory Agreement upon a 60-day written notice and is automatically terminated in the event of its "assignment," as defined in the 1940 Act.

In addition to the management fees payable to the Adviser, the Fund is responsible for their own operating expenses, including: fees and expenses incurred in connection with the issuance, registration and transfer of its shares; brokerage and commission expenses; all expenses of transfer, receipt, safekeeping, servicing and accounting for the cash, securities and other property of the Trust for the benefit of the Fund including all fees and expenses of its custodian and accounting services agent; interest charges on any borrowings; costs and expenses of pricing and calculating its daily NAV per share and of maintaining its books of account required under the 1940 Act; taxes, if any; a pro rata portion of expenditures in connection with meetings of the Fund's shareholders and the Trust's Board that are properly payable by the Fund; salaries and expenses of officers and fees and expenses of members of the Board or members of any advisory board or committee who are not members of, affiliated with or interested persons of the Adviser or Administrator; insurance premiums on property or personnel of the Fund which inure to their benefit, including liability and fidelity bond insurance; the cost of preparing and printing reports, proxy statements, prospectuses and the statement of additional information of the Fund or other communications for distribution to existing shareholders; legal counsel, auditing and accounting fees; trade association membership dues (including membership dues in the Investment Company Institute allocable to the Fund); fees and expenses (including legal fees) of registering and maintaining registration of its shares for sale under federal and applicable state and foreign securities laws; all expenses of maintaining shareholder accounts, including all charges for transfer, shareholder recordkeeping, dividend disbursing, redemption, and other agents for the benefit of the Fund, if any; and all other charges and costs of its operation plus any extraordinary and non-recurring expenses, except as otherwise prescribed in the Advisory Agreement.

Though the Fund is responsible for its own operating expenses, the Adviser has contractually agreed to waive a portion or all of the management fees payable to it by the Fund and/or to pay the Fund's operating expenses to the extent necessary to limit the Fund's aggregate annual operating expenses (other than interest expense, brokerage commissions, dividend expense on short sales, taxes, extraordinary expenses, and acquired fund fees and expenses) to the limits set forth in the Annual Fund Operating Expenses table of the Prospectus. Any such waivers made by the Adviser in its management fees or payment of expenses which are the Fund's obligation may be subject to recoupment by the Adviser from the Fund, if so

requested by the Adviser, if the aggregate amount actually paid by the Fund toward the operating expenses in a fiscal year (taking into account the recoupment) does not exceed the current applicable limitation on the Fund's expenses or, if lower, the limitation in effect at the time of the waiver and/or reimbursement. The Adviser is permitted to recoup only for management fee waivers and expense payments made in the previous three-year period. Any such recoupment is also contingent upon the Board's subsequent review and ratification of the recouped amounts. Such recoupment may not be paid prior to the Fund's payment of current ordinary operating expenses.

For the fiscal periods indicated below, the Fund paid management fees to its Adviser as follows:

Year	Gross Management Fees	Management Fees Waived/Expense Reimbursements	Net Management Fees (After Waivers/Expense Reimbursements)
Fiscal Year Ended September 30, 2017 ¹	\$762,150	\$(131,188)	\$630,962
Fiscal Year Ended September 30, 2016	\$599,012	\$(93,362)	\$505,650
Fiscal Year Ended September 30, 2015 ²	\$730,072	\$(181,766)	\$548,306

¹ Fees paid prior to February 27, 2017 were paid by the Predecessor Fund to the prior adviser.

² For the fiscal year ended September 30, 2015, the prior adviser recaptured \$100.

For the services provided to the Predecessor Fund, the prior adviser paid the Adviser a subadvisory fee, calculated daily and payable monthly at an annual rate equal to 90% of the management fee paid to the prior adviser, net of expense waivers and reimbursements.

Portfolio Managers

Bill Miller

As of September 30, 2017:

Type of Account	Number of Accounts Managed	Total Assets Managed	Number of Accounts Managed for which Advisory Fee is Performance-Based	Assets Managed for which Advisory Fee is Performance-Based
Registered Investment Companies	1	\$1,429,015,397	0	—
Other pooled investment vehicles	3	\$437,097,224	1	\$143,613,180
Other accounts	3	\$146,813,206	0	—

Bill Miller IV

As of September 30, 2017:

Type of Account	Number of Accounts Managed	Total Assets Managed	Number of Accounts Managed for which Advisory Fee is Performance-Based	Assets Managed for which Advisory Fee is Performance-Based
Registered Investment Companies	0	—	0	—
Other pooled investment vehicles	0	—	0	—
Other accounts	2	\$23,344,630	0	—

The fee schedule for the Miller Income Fund does not contain the same breakpoints that apply to certain of the other accounts managed by the co-portfolio managers; therefore, the effective fee paid by the Fund may be higher than the effective fee paid by the other accounts described above.

In the opinion of the Adviser for the Fund, the co-portfolio managers' simultaneous management of the Fund and the accounts included in the tables above does not create any material conflicts of interests.

The portfolio managers have day-to-day management responsibility for other accounts. The management of multiple accounts by the co-portfolio managers may create the potential for conflicts to arise. For example, the co-portfolio managers

make investment decisions for each account based on the investment guidelines, cash flows and other factors that the co-portfolio managers believe are applicable to that account. Consequently, the co-portfolio managers may purchase (or sell) the same security for multiple accounts at different times. The co-portfolio managers may also manage accounts whose style, objectives and policies differ from those of the Fund. Trading activity appropriate for one account managed by the co-portfolio managers may have adverse consequences for another account managed by the co-portfolio managers. For example, if an account were to sell a significant position in a security, that sale could cause the market price of the security to decrease, while the fund maintained its position in the security. A potential conflict may also arise since the co-portfolio managers are responsible for accounts that have different advisory fees – the difference in the fees may create an incentive for a co-portfolio manager to favor one account over another, for example, in terms of access to investment opportunities of limited availability. This potential conflict may be heightened where an account is subject to a performance-based fee. The co-portfolio managers' personal investing may also give rise to potential conflicts of interest. The Adviser has adopted brokerage, trade allocation, personal investing and other policies and procedures that it believes are reasonably designed to address the potential conflicts of interest described above. For example, the Adviser may combine client orders to buy or sell the same security in an effort to obtain best execution or to negotiate a more favorable commission rate. In addition, if orders to buy or sell a security for multiple accounts at approximately the same time are executed at different prices or commissions, the transactions will generally be allocated to each account at the average execution price and commission. In circumstances where an order is not completely filled, each account will normally receive a pro-rated portion of the securities based upon its level of participation in the order. In circumstances where a portfolio manager is making a decision to acquire an investment of limited availability (for example, purchases in an initial public offering), the investments must be allocated to participating clients on a pro rata basis (based upon account size) unless otherwise approved by the Chief Compliance Officer or a delegate. Employees of the Adviser may from time to time buy or sell securities for their own accounts that are also purchased and/or sold for funds or other clients. This has the potential to create a conflict of interest between employees of the Adviser and clients. In order to address this potential conflict of interest, the Adviser's Code of Ethics establishes policies and procedures relating to trading by employees. The Code of Ethics is based on the principle that employees owe a fiduciary duty to clients and must avoid activities, interests and relationships that might interfere with making decisions in the best interests of any client. Among other things, the Code of Ethics generally requires employees to receive pre-clearance for any securities transaction in which they have or acquire a beneficial interest.

Portfolio Managers Compensation

Bill Miller is Managing Member for the Adviser. He receives a fixed salary and has direct and indirect ownership interests in the Adviser. His primary compensation comes from his ownership interests and the profits of the Adviser. Mr. Miller is also eligible to receive from the Adviser employee benefits, including, but not limited to, health care and other insurance benefits, and participation in a 401(k) program

As of September 30, 2017, Bill Miller owned shares of the Fund with a value in excess of \$1,000,000.

Bill Miller IV is paid a fixed base salary and a bonus. Bonus compensation is reviewed annually and is determined by a number of factors, including the annual performance of the strategy, his performance over various other time periods, the total value of the assets in the strategy, his contribution to the Adviser's research process, the profitability of the Adviser and his contribution to profitability, and trends in industry compensation levels and practices. Mr. Miller also has an indirect ownership interest in the Adviser and as a result, he may also receive compensation based on the profits of the Adviser. Mr. Miller is also eligible to receive from the Adviser employee benefits, including, but not limited to, health care and other insurance benefits, participation in a 401(k) program.

As of September 30, 2017, Bill Miller IV owned shares of the Fund with a value in excess of \$1,000,000.

Other Service Providers

Fund Administrator, Transfer Agent and Fund Accountant

Pursuant to an administration agreement (the "Administration Agreement"), U.S. Bancorp Fund Services, LLC ("USBFS"), 615 East Michigan Street, Milwaukee, Wisconsin 53202, acts as the administrator to the Fund. USBFS provides certain services to the Fund including, among other responsibilities, coordinating the negotiation of contracts and fees with, and the monitoring of performance and billing of, the Fund's independent contractors and agents; preparation for signature by an officer of the Trust of all documents required to be filed for compliance by the Trust and the Fund with applicable laws and regulations, excluding those of the securities laws of various states; arranging for the computation of performance data, including NAV per share and yield; responding to shareholder inquiries; and arranging for the maintenance of books and records of the Fund, and providing, at its own expense, office facilities, equipment and personnel necessary to carry out its duties. In this capacity, USBFS does not have any responsibility or authority for the management of the Fund, the determination of investment policy, or for any matter pertaining to the distribution of Fund shares.

Pursuant to the Administration Agreement, as compensation for its fund administration and portfolio compliance services, USBFS receives from the Fund, a fee based on the Fund's current average daily net assets. Pursuant to the Administration Agreement, USBFS will receive a portion of fees from the Fund as part of a bundled-fee agreement for services performed as Administrator and Fund Accountant and separately as the transfer agent and dividend disbursing agent (the "Transfer Agent"). Additionally, USBFS provides Chief Compliance Officer services to the Trust under a separate agreement. The cost for the Chief Compliance Officer's services is charged to the Fund and approved by the Board annually.

Prior to the reorganization, the Predecessor Fund's administrative fees were bundled in the Management Agreement. Post reorganization, for the fiscal period shown below, the Fund paid the following administration fees to USBFS.

	Administration Fees
Fiscal period February 27, 2017 through September 30, 2017	\$37,295

Custodian

Pursuant to a Custody Agreement between the Trust and U.S. Bank National Association, located at 1555 North Rivercenter Drive, Suite 302, Milwaukee, Wisconsin 53212 (the "Custodian"), the Custodian serves as the custodian of the Fund's assets, holds the Fund's portfolio securities in safekeeping, and keeps all necessary records and documents relating to its duties. The Custodian is compensated with an asset-based fee plus transaction fees and is reimbursed for out-of-pocket expenses.

The Custodian and Administrator do not participate in decisions relating to the purchase and sale of securities by the Fund. The Administrator, Transfer Agent, Custodian and the Funds' Distributor (as defined below) are affiliated entities under the common control of U.S. Bancorp. The Custodian and its affiliates may participate in revenue sharing arrangements with the service providers of mutual funds in which the Fund may invest.

Independent Registered Public Accounting Firm

BBD, LLP, 1835 Market Street, 3rd Floor, Philadelphia, Pennsylvania 19103, serves as the independent registered public accounting firm to the Fund.

Legal Counsel

Morgan, Lewis & Bockius, LLP, 1111 Pennsylvania Avenue NW, Washington, DC 20004, serves as legal counsel to the Trust.

Execution of Portfolio Transactions

Pursuant to the Advisory Agreement, the Adviser determines which securities are to be purchased and sold by the Fund and which broker-dealers are eligible to execute the Fund's portfolio transactions. Purchases and sales of securities in the over-the-counter ("OTC") market will generally be executed directly with a "market-maker" unless, in the opinion of the Adviser, a better price and execution can otherwise be obtained by using a broker for the transaction.

Purchases of portfolio securities for the Fund also may be made directly from issuers or from underwriters. Where possible, purchase and sale transactions will be effected through dealers (including banks) which specialize in the types of securities which the Fund will be holding, unless better executions are available elsewhere. Dealers and underwriters usually act as principal for their own accounts. Purchases from underwriters will include a concession paid by the issuer to the underwriter and purchases from dealers will include the spread between the bid and the asked price. If the execution and price offered by more than one dealer or underwriter are comparable, the order may be allocated to a dealer or underwriter that has provided research or other services as discussed below.

In placing portfolio transactions, the Adviser will seek best execution. The full range and quality of services available will be considered in making these determinations, such as the size of the order, the difficulty of execution, the operational facilities of the firm involved, the firm's risk in positioning a block of securities and other factors. In those instances where it is reasonably determined that more than one broker-dealer can offer the services needed to obtain the most favorable price and execution available, consideration may be given to those broker-dealers which furnish or supply research and statistical information to the Adviser that it may lawfully and appropriately use in its investment advisory capacities, as well as provide other services in addition to execution services. The Adviser considers such information, which is in addition to and not in lieu of the services required to be performed by it under its Agreement with the Fund, to be useful in varying degrees, but of indeterminable value. Portfolio transactions may be placed with broker-dealers who sell shares of the Fund subject to rules adopted by the Financial Industry Regulatory Authority, Inc. ("FINRA") and the SEC.

While it is the Fund's general policy to first seek to obtain the most favorable price and execution available in selecting a broker-dealer to execute portfolio transactions for the Fund, in accordance with Section 28(e) under the Securities and Exchange Act of 1934, when it is determined that more than one broker can deliver best execution, weight is also given to the ability of a broker-dealer to furnish brokerage and research services to the Fund or to the Adviser, even if the specific services are not directly useful to the Fund and may be useful to the Adviser in advising other clients. In negotiating commissions with a broker or evaluating the spread to be paid to a dealer, the Fund may therefore pay a higher commission or spread than would be the case if no weight were given to the furnishing of these supplemental services, provided that the amount of such commission or spread has been determined in good faith by the Adviser to be reasonable in relation to the value of the brokerage and/or research services provided by such broker-dealer.

Investment decisions for the Fund are made independently from those of other client accounts or mutual funds managed or advised by the Adviser. Nevertheless, it is possible that at times identical securities will be acceptable for both the Fund and one or more of such client accounts or mutual funds. In such event, the position of the Fund and such client account(s) or mutual funds in the same issuer may vary and the length of time that each may choose to hold its investment in the same issuer may likewise vary. However, to the extent any of these client accounts or mutual funds seek to acquire the same security as the Fund at the same time, the Fund may not be able to acquire as large a portion of such security as it desires, or it may have to pay a higher price or obtain a lower yield for such security. Similarly, the Fund may not be able to obtain as high a price for, or as large an execution of, an order to sell any particular security at the same time. If one or more of such client accounts or mutual funds simultaneously purchases or sells the same security that the Fund is purchasing or selling, each day's transactions in such security will be allocated between the Fund and all such client accounts or mutual funds in a manner deemed equitable by the Adviser, taking into account the respective sizes of the accounts and the amount of cash available for investment, the investment objective of the account, and the ease with which a client's appropriate amount can be bought, as well as the liquidity and volatility of the account and the urgency involved in making an investment decision for the client. It is recognized that in some cases this system could have a detrimental effect on the price or value of the security insofar as the Fund is concerned. In other cases, however, it is believed that the ability of the Fund to participate in volume transactions may produce better executions for the Fund.

For the fiscal periods indicated below, the Fund paid the following brokerage commissions:

Year*	Brokerage Commissions Paid
Fiscal Year Ended September 30, 2017	\$319,386
Fiscal Year Ended September 30, 2016	\$163,181
Fiscal Year Ended September 30, 2015	\$226,174

* Brokerage commissions paid prior to February 27, 2017 were paid by the Predecessor Fund.

No brokerage commissions were paid to affiliated persons of the Predecessor Fund or the Fund, respectively, during the last three fiscal years.

As of September 30, 2017, the Fund did not own any securities of its regular broker/dealers or their parents.

For the fiscal year ended September 30, 2017, the Fund paid commission to brokers that provided research services as indicated below:

Total Dollar Amount of Brokerage Transactions Related to Research Services	Total Dollar Amount of Brokerage Commissions Paid on Transactions Related to Research Services*
\$4,398,520.	\$9,131

* Brokerage commissions paid prior to February 27, 2017 were paid by the Predecessor Fund.

Additional Purchase, Redemption and Exchange Information

The information provided below supplements the information contained in the Prospectus regarding the purchase and redemption of Fund shares.

How to Buy Shares

A financial intermediary may offer Fund shares subject to variations in or elimination of the Fund's sales charges ("variations"), provided such variations are described in the Fund's Prospectus. For the variations applicable to shares offered through specific financial intermediaries, please see Appendix A to the Fund's Prospectus - Financial Intermediary Sales Charge Variations ("Appendix A to the Fund's Prospectus"). Sales charge variations may apply to purchases, sales, exchanges and reinvestments of Fund shares and a shareholder transacting in Fund shares through the Financial

Intermediary identified in Appendix A to the Fund's Prospectus should read those terms and conditions carefully. A variation that is specific to the financial intermediary is not applicable to shares held directly with the Fund or through another intermediary. Please consult the financial intermediary with respect to any variations listed on Appendix A to the Fund's Prospectus.

You may purchase shares of the Fund from securities brokers, dealers or financial intermediaries (each called a "Financial Intermediary" and collectively, "Financial Intermediaries"). Investors should contact their Financial Intermediary directly for appropriate instructions, as well as information pertaining to accounts and any service or transaction fees that may be charged. The Fund may enter into arrangements with certain Financial Intermediaries whereby such Financial Intermediaries are authorized to accept your order on behalf of the Fund. If you transmit your order to these Financial Intermediaries before the close of regular trading (generally 4:00 p.m., Eastern Time) on a day that the New York Stock Exchange ("NYSE") is open for business, shares will be purchased at the appropriate per share price next computed after it is received by the Financial Intermediary. Investors should check with their Financial Intermediary to determine if it participates in these arrangements.

The public offering price of Fund shares is the NAV per share, plus any applicable sales charge. Shares are purchased at the public offering price next determined after the Transfer Agent receives your order in good order (*i.e.*, the purchase request includes the name of the Fund and share class; the dollar amount of shares to be purchased; your account application or investment stub; and a check payable to the Fund). In most cases, in order to receive that day's public offering price, the Transfer Agent must receive your order in good order before the close of regular trading on the NYSE, normally 4:00 p.m., Eastern Time.

The Trust reserves the right in its sole discretion (i) to suspend the continued offering of the Fund's shares and (ii) to reject purchase orders in whole or in part when in the judgment of the Adviser or the Distributor such rejection is in the best interest of the Fund. The Adviser has the right to reduce or waive the minimum for initial and subsequent investments for certain fiduciary accounts or under circumstances where certain economies can be achieved in sales of the Fund's shares.

In addition to cash purchases, Fund shares may be purchased by tendering payment in-kind in the form of shares of stock, bonds or other securities. Any securities used to buy Fund shares must be readily marketable; their acquisition consistent with the Fund's objective and otherwise acceptable to the Adviser and the Board.

Class I Shares. The following persons are eligible to purchase Class I shares directly from the Fund: (i) current employees of the Fund's Adviser and its affiliates; (ii) former employees of the Fund's Adviser and its affiliates with existing accounts; (iii) current and former board members of Trust for Advised Portfolios; and (iv) the immediate families of such persons. Immediate families are such person's spouse (and, in the case of a deceased board member, the surviving spouse), and parents, grandparents, children, and grandchildren (including step-relationships). For such investors, the minimum initial investment is \$1,000 and the minimum for each purchase of additional shares is \$50. Current employees may purchase additional Class I shares through a systematic investment plan.

Under certain circumstances, an investor who purchases Fund shares pursuant to a fee-based advisory account program of an Eligible Financial Intermediary as authorized by the Adviser may be afforded an opportunity to make a conversion between one or more share classes owned by the investor in the same Fund to Class I shares of that Fund. Such a conversion in these particular circumstances does not cause the investor to realize taxable gain or loss.

Automatic Investment Plan ("AIP"). Shareholders may make additions to their accounts at any time by purchasing shares through a service known as the Automatic Investment Plan. Under the AIP, the transfer agent is authorized through preauthorized transfers of at least \$50 on a monthly, quarterly, every alternate month, semi-annual or annual basis to charge the shareholder's account held with a bank or other financial institution as indicated by the shareholder, to provide for systematic additions to the shareholder's Fund account. If you wish to enroll in the AIP, complete the appropriate section on the Account application. Your signed Account application must be received at least 15 calendar days prior to the initial transaction. A \$25 fee will be imposed if your AIP transaction is returned for any reason. The Fund may terminate or modify this privilege at any time. You may terminate your participation in the AIP at any time by notifying the Transfer Agent sufficiently in advance of the next withdrawal. Please contact your financial institution to determine if it is an ACH member. Your financial institution must be an ACH member in order for you to participate in the AIP.

The AIP is a method of using dollar cost averaging as an investment strategy that involves investing a fixed amount of money at regular time intervals. However, a program of regular investment cannot ensure a profit or protect against a loss as a result of declining markets. By continually investing the same amount, you will be purchasing more shares when the price is low and fewer shares when the price is high. Please call 1-888-593-5110 for additional information regarding the Fund's AIP.

Sales Charge Alternatives

The following classes of shares are available for purchase. See the Prospectus for a discussion of who is eligible to purchase certain classes and of factors to consider in selecting which class of shares to purchase.

Class A. Class A shares are sold to investors at the public offering price, which is the NAV plus an initial sales charge, as described in the Prospectus.

Sales charges are calculated based on the aggregate of purchases of Class A shares of the Fund made at one time by any “person,” which includes an individual and his or her spouse and children under the age of 21, or a trustee or other fiduciary of a single trust estate or single fiduciary account. For additional information regarding sales charge reductions, see “Sales Charge Waivers and Reductions” below.

Purchases of Class A shares of \$1 million or more will be made at NAV without any initial sales charge, but are subject to a contingent deferred sales charge of 1.00% on redemptions made within 18 months of purchase. The contingent deferred sales charge is waived in the same circumstances in which the contingent deferred sales charge applicable to Class C shares is waived. See “Contingent Deferred Sales Charge Provisions” and “Waivers of Contingent Deferred Sales Charge” below.

Class C. Class C shares are sold without an initial sales charge but are subject to a contingent deferred sales charge of 1.00% on certain redemptions made within 12 months of purchase. See “Contingent Deferred Sales Charge Provisions” below. Purchases of \$1 million or more of Class C shares will be rejected. Your Financial Intermediary is responsible for placing individual purchases of \$1 million or more into Class I shares of the Fund.

Class FI, Class I, and Class IS. Class FI, Class I, and Class IS shares are sold at NAV with no initial sales charge on purchases and no contingent deferred sales charge upon redemption.

Sales Charge Waivers and Reductions

Initial Sales Charge Waivers. Purchases of Class A shares may be made at NAV without an initial sales charge in the following circumstances:

- (a) investors purchasing shares directly through the Fund;
- (b) sales to (i) current and retired Board Members, (ii) current employees of the Adviser and its subsidiaries, (iii) the “immediate families” of such persons (“immediate families” are such person’s spouse, including the surviving spouse of a deceased Board Member, and children under the age of 21) and (iv) a pension, profit-sharing or other benefit plan for the benefit of such persons;
- (c) sales to any employees of Financial Intermediaries having dealer, service or other selling agreements with the Fund’s distributor or otherwise having an arrangement with any such Financial Intermediary with respect to sales of Fund shares, and by the immediate families of such persons or by a pension, profit-sharing or other benefit plan for the benefit of such persons (providing the purchase is made for investment purposes and such securities will not be resold except through redemption or repurchase);
- (d) offers of Class A shares to any other investment company to effect the combination of such company with the Fund by merger, acquisition of assets or otherwise;
- (e) purchases by shareholders who have redeemed Class A shares in the Fund (or Class A shares of another Fund sold by the Adviser that is offered with a sales charge) and who wish to reinvest their redemption proceeds in the Fund, provided the reinvestment is made within 365 calendar days of the redemption;
- (f) purchases by certain separate accounts used to fund unregistered variable annuity contracts;
- (g) purchases by investors participating in “wrap fee” or asset allocation programs or other fee-based arrangements sponsored by broker/dealers and other financial institutions that have entered into agreements with the Adviser;
- (h) purchases by direct retail investment platforms through mutual fund “supermarkets,” where the sponsor links its client’s account (including IRA accounts on such platforms) to a master account in the sponsor’s name; and

- (i) sales through Financial Intermediaries who have entered into an agreement with the Adviser to offer shares to self-directed investment brokerage accounts that may or may not charge a transaction fee to their customers.

In order to obtain such discounts, the purchaser must provide sufficient information at the time of purchase to permit verification that the purchase qualifies for the elimination of the sales charge.

All existing retirement plan shareholders who purchased Class A shares at NAV prior to November 20, 2006, are permitted to purchase additional Class A shares at NAV. Certain existing programs for current and prospective retirement plan investors sponsored by Financial Intermediaries approved by the Adviser prior to November 20, 2006 will also remain eligible to purchase Class A shares at NAV.

In order to take advantage of reductions in sales charges that may be available to you when you purchase Fund shares, you must inform your Financial Intermediary or the Fund if you are eligible for a letter of intent or a right of accumulation and if you own shares of other Miller Value Funds that are eligible to be aggregated with your purchases. Certain records, such as account statements, may be necessary in order to verify your eligibility for a reduced sales charge.

For the sales charge variations applicable to shares offered through specific Financial Intermediaries, please see Appendix A to the Fund's Prospectus.

Rights of Accumulation Privilege. You may combine your new purchase of Class A shares with any other class shares of the Miller Value Funds you currently own for the purpose of qualifying for the lower initial sales charge rates that apply to larger purchases. The applicable sales charge for the new purchase is based on the total of your current purchase and the current value, calculated using the current day public offering price of all other shares you own. You may also combine the account value of your spouse and children under the age of 21. Only the shares held at the intermediary or the transfer agent at which you are making the current purchase can be used for the purposes of a lower sales charge based on Rights of Accumulation.

If you hold Fund shares in accounts at two or more Financial Intermediaries, please contact your Financial Intermediaries to determine which shares may be combined.

Letters of Intent ("LOI"). By signing a LOI you can reduce your Class A sales charge. Your individual purchases will be made at the applicable sales charge based on the amount you intend to invest over a 13-month period. The LOI will apply to all purchases of the Fund's Class A shares. You have a choice of seven Asset Level Goal amounts, as follows:

- | | |
|---------------|-----------------|
| (1) \$25,000 | (5) \$500,000 |
| (2) \$50,000 | (6) \$750,000 |
| (3) \$100,000 | (7) \$1,000,000 |
| (4) \$250,000 | |

Any shares purchased within 90 days of the date you sign the letter of intent may be used as credit toward completion, but the reduced sales charge will only apply to new purchases made on or after that date. Purchases resulting from the reinvestment of dividends and capital gains do not apply toward fulfillment of the LOI. Shares equal to 5.75% of the amount of the LOI will be held in escrow during the 13-month period. If, at the end of that time the total amount of purchases made is less than the amount intended, you will be required to pay the difference between the reduced sales charge and the sales charge applicable to the individual purchases had the LOI not been in effect. This amount will be obtained from redemption of the escrow shares. Any remaining escrow shares will be released to you.

If you establish an LOI with the Fund you can aggregate your accounts as well as the accounts of your spouse and children under age 21. You will need to provide written instruction with respect to the other accounts whose purchases should be considered in fulfillment of the LOI. Only the accounts held at the Financial Intermediary or the Transfer Agent at which you are making the purchase can be used toward fulfillment of the LOI.

Sales and Exchanges. Shares acquired pursuant to a LOI, other than escrowed shares, may be redeemed or exchanged at any time, although any shares that are redeemed prior to meeting your Asset Level Goal will no longer count towards meeting your Asset Level Goal. However, complete liquidation of purchases made under a LOI prior to meeting the Asset Level Goal will result in the cancellation of the LOI. See "Failure to Meet Asset Level Goal" below. Exchanges in accordance with the Prospectus are permitted, and shares so exchanged will continue to count towards your Asset Level Goal, as long as the exchange results in an Eligible Fund Purchase.

Cancellation of Letter of Intent. You may cancel a LOI by notifying your Financial Intermediary in writing, or if you purchase your shares directly through the Fund, by notifying the Fund in writing. The LOI will be automatically cancelled if all shares are sold or redeemed as set forth above. See “Failure to Meet Asset Level Goal” below.

Failure to Meet Asset Level Goal. If the total assets under your LOI within its 13-month term are less than your Asset Level Goal or you elect to liquidate all of your holdings or otherwise cancel the LOI before reaching your Asset Level Goal, you will be liable for the difference between: (a) the sales charge actually paid and; (b) the sales charge that would have applied if you had not entered into the LOI. You may, however, be entitled to any breakpoints that would have been available to you under the accumulation privilege. An appropriate number of shares in your account will be redeemed to realize the amount due. For these purposes, by entering into a LOI, you irrevocably appoint your Financial Adviser, or if you purchase your shares directly through the Fund, the Fund, as your attorney-in-fact for the purposes of holding the escrowed shares and surrendering shares in your account for redemption. If there are insufficient assets in your account, you will be liable for the difference. Any escrowed shares remaining after such redemption will be released to your account.

Shareholders purchasing shares at a reduced sales charge under a LOI indicate their acceptance of these terms and those in the Prospectus with their first purchase.

Contingent Deferred Sales Charge Provisions

The “Contingent Deferred Sales Charge Shares” are: (a) Class C shares; and (b) Class A that were purchased without an initial sales charge but are subject to a contingent deferred sales charge. A contingent deferred sales charge may be imposed on certain redemptions of these shares.

Any applicable contingent deferred sales charge will be assessed on the NAV at the time of purchase or redemption, whichever is less.

Class C shares are subject to a 1.00% contingent deferred sales charge if redeemed within 12 months of purchase.

Class A shares that are Contingent Deferred Sales Charge Shares are subject to a 1.00% contingent deferred sales charge if redeemed within 18 months of purchase.

In determining the applicability of any contingent deferred sales charge, it will be assumed that a redemption is made first of shares representing capital appreciation, next of shares representing the reinvestment of dividends and capital gain distributions, next of shares that are not subject to the contingent deferred sales charge and finally of other shares held by the shareholder for the longest period of time. The length of time that Contingent Deferred Sales Charge Shares acquired through an exchange have been held will be calculated from the date the shares exchanged were initially acquired. For federal income tax purposes, the amount of the contingent deferred sales charge will reduce the gain or increase the loss, as the case may be, on the amount realized on the redemption.

Waivers of Contingent Deferred Sales Charge

The contingent deferred sales charge will be waived on: (a) exchanges (see “Exchange Privilege”); (b) automatic cash withdrawals in amounts equal to or less than 2.00% of the shareholder’s account balance at the time the withdrawals commence, up to a maximum of 12.00% in one year (see “Systematic Withdrawal Plan”); (c) redemptions of shares within 12 months following the death or disability (as defined in the Code) of the shareholder; (d) mandatory post-retirement distributions from retirement plans or individual retirement accounts (“IRAs”) commencing on or after attainment of age 70 1/2; (except that shareholders of certain retirement plans or IRA accounts established prior to May 23, 2005, will be eligible to obtain a waiver of the contingent deferred sales charge on all funds held in those accounts at age 59 1/2 and may be required to demonstrate such eligibility at the time of redemption); (e) involuntary redemptions; (f) redemptions of shares to effect a combination of the Fund with any investment company by merger, acquisition of assets or otherwise; (g) tax-free returns of an excess contribution to any retirement plan; and (h) certain redemptions of shares of the Fund in connection with lump-sum or other distributions made by eligible retirement plans or redemption of shares by participants in certain “wrap fee” or asset allocation programs sponsored by broker/dealers and other financial institutions that have entered into agreements with the Distributor or the Adviser.

The contingent deferred sales charge is waived on new Class C shares purchased by retirement plan omnibus accounts held on the books of the Fund.

For the contingent deferred sales charge variations applicable to shares offered through specific Financial Intermediaries, please see Appendix A to the Fund’s Prospectus.

Initial Sales Charge

The aggregate dollar amounts of initial sales charge received on Class A shares and retained by the predecessor distributor, Legg Mason Investor Services, LLC ("LMIS"), a wholly-owned subsidiary of Legg Mason, or the current distributor, Quasar Distributors, LLC, were as follows:

Class A Shares For the fiscal year or period ended September 30	Total Commissions	Amounts Retained by Distributor
2017 (LMIS and Quasar)	\$ 53,792	\$7,557
2016 (LMIS)	\$ 39,971	\$6,616
2015 (LIMS)	\$119,547	\$22,077

Contingent Deferred Sales Charges

The aggregate dollar amounts of contingent deferred sales charges on Class A and Class C shares received and retained by LMIS, the predecessor distributor, and Quasar Distributors, LLC, the current distributor, were as follows:

Class A Shares For the fiscal year or period ended September 30	Amounts Retained by Distributor
2017 (LMIS and Quasar)	\$0
2016 (LMIS)	\$6,404
2015 (LMIS)	\$11,610

Class C Shares For the fiscal year ended September 30	Amounts Retained by Distributor
2017 (LMIS and Quasar)	\$486
2016 (LMIS)	\$2,307
2015 (LMIS)	\$6,491

Additional Redemption Information

How to Sell Shares and Delivery of Redemption Proceeds

You can sell your Fund shares any day the NYSE is open for regular trading, either directly to the Fund or through your Financial Intermediary.

Payments to shareholders for shares of the Fund redeemed directly from the Fund will be made as promptly as possible, but no later than seven calendar days after receipt by the Transfer Agent of the written request in proper form, with the appropriate documentation as stated in the Prospectus, except that the Fund may suspend the right of redemption or postpone the date of payment during any period when (a) trading on the NYSE is restricted as determined by the SEC or the NYSE is closed for other than weekends and holidays; (b) an emergency exists as determined by the SEC making disposal of portfolio securities or valuation of net assets of the Fund not reasonably practicable; or (c) for such other period as the SEC may permit for the protection of the Fund's shareholders. Under unusual circumstances, the Fund may suspend redemptions, or postpone payment for more than seven calendar days, but only as authorized by SEC rules.

The value of shares on redemption or repurchase may be more or less than the investor's cost, depending upon the market value of the Fund's portfolio securities at the time of redemption or repurchase.

Telephone Redemptions

Shareholders with telephone transaction privileges established on their account may redeem Fund shares by telephone. Upon receipt of any instructions or inquiries by telephone from the shareholder, the Fund or its authorized agents may carry out the instructions and/or respond to the inquiry consistent with the shareholder's previously established account service options. For joint accounts, instructions or inquiries from either party will be carried out without prior notice to the other account owners. In acting upon telephone instructions, the Fund and its agents use procedures that are reasonably designed to ensure that such instructions are genuine. These include recording all telephone calls, requiring pertinent information about the account and sending written confirmation of each transaction to the registered owner.

The Transfer Agent will employ reasonable procedures to confirm that instructions communicated by telephone are genuine. If the Transfer Agent fails to employ reasonable procedures, the Fund and the Transfer Agent may be liable for any losses due to unauthorized or fraudulent instructions. If these procedures are followed, however, to the extent permitted by applicable law, neither the Fund nor its agents will be liable for any loss, liability, cost or expense arising out of any

redemption request, including any fraudulent or unauthorized request. For additional information, contact the Transfer Agent.

Systematic Withdrawal Plan (“SWP”)

The Systematic Withdrawal Plan is available to those shareholders who own shares directly with the Fund, excluding those shares held in IRAs or Coverdell education savings accounts (“Coverdell ESAs”). You should contact your Financial Adviser to determine if it offers a similar service.

Class A and Class C Shareholders

Class A and Class C shareholders having an account with a balance of \$10,000 or more (\$5,000 or more for Retirement Accounts) may elect to make withdrawals of a minimum of \$50 on a monthly, every alternate month, quarterly, semi-annual, or annual basis. If you elect this method of redemption, the Fund will send a check directly to your address of record or will send the payment directly to your bank account via electronic funds transfer through the ACH network. You may change the monthly, every alternate month, quarterly, semi-annual, or annual amount to be paid to you without charge by notifying the Fund. You may terminate the SWP at any time, without charge or penalty, by contacting the Fund. The Fund, the Fund’s transfer agent, and the Adviser reserve the right to modify or terminate the SWP at any time. See “Waivers of Contingent Deferred Sales Charge,” above, for information about application of the contingent deferred sales charge to withdrawals under the Systematic Withdrawal Plan.

Class FI, Class I and Class IS Shareholders

Certain shareholders of the Fund’s Class FI, Class I or Class IS with an initial NAV of \$1,000,000 or more may be eligible to participate in the SWP. If you elect this method of redemption, the Fund will send a check directly to your address of record or will send the payment directly to your bank account via electronic funds transfer through the ACH network. Requests must be made in writing to the Fund or a Financial Intermediary to participate in, change or discontinue the SWP. You may change the monthly amount to be paid to you or terminate the SWP at any time, without charge or penalty, by notifying the Fund at 1-888-593-5110. The Fund, its transfer agent and the Adviser also reserve the right to modify or terminate the SWP at any time.

Redemptions In-Kind

The Fund has reserved the right to pay the redemption price of its shares, either totally or partially by a distribution in-kind of portfolio securities (instead of cash). The securities so distributed would be valued at the same amount as that assigned to them in calculating the NAV per share for the shares being sold. If a shareholder receives a distribution in-kind, the shareholder could incur brokerage or other charges in converting the securities to cash.

In the unlikely event the Fund were to elect to make an in-kind redemption, the Fund expects that it would follow the normal protocol of making such distribution by way of a pro rata distribution based on its entire portfolio. If the Fund held illiquid securities, such distribution may contain a pro rata portion of such illiquid securities or the Fund may determine, based on a materiality assessment, not to include illiquid securities in the in-kind redemption. The Fund does not anticipate that it would ever selectively distribute a greater than pro rata portion of any illiquid securities to satisfy a redemption request. If such securities are included in the distribution, shareholders may not be able to liquidate such securities and may be required to hold such securities indefinitely. Shareholders’ ability to liquidate such securities distributed in-kind may be restricted by resale limitations or substantial restrictions on transfer imposed by the issuers of the securities or by law. Shareholders may only be able to liquidate such securities distributed in-kind at a substantial discount from their value, and there may be higher brokerage costs associated with any subsequent disposition of these securities by the recipient.

Exchange Privilege

The exchange privilege enables shareholders to acquire shares of the same class in another Miller Value Fund with different investment objectives when they believe that a shift between Funds is an appropriate investment decision. Prior to any exchange, the shareholder should obtain and review a copy of the current prospectus of each Fund into which an exchange is being considered. The Fund’s Prospectus describes the requirements for exchanging shares of a Fund.

Upon receipt of proper instructions and all necessary supporting documents, shares submitted for exchange are redeemed at the then-current net asset value, and the proceeds, net of any applicable sales charge, are immediately invested in shares of a Fund being acquired at that Fund’s then-current net asset value. The Miller Value Funds reserve the right to reject any exchange request. The exchange privilege may be modified or terminated at any time after written notice to shareholders.

The Miller Value Funds are not designed to provide investors with a means of speculation on short-term market movements. A pattern of frequent exchanges by investors can be disruptive to efficient portfolio management and, consequently, can be detrimental to the fund and its shareholders. See “Frequent trading of Fund shares” in the Fund’s Prospectus.

During times of drastic economic or market conditions, the Miller Value Funds may suspend the exchange privilege temporarily without notice and treat exchange requests based on their separate components—redemption orders with a simultaneous request to purchase the other Fund’s shares. In such a case, the redemption request would be processed at the Fund’s next determined NAV but the purchase order would be effective only at the NAV next determined after the Fund being purchased formally accepts the order, which may result in the purchase being delayed.

The exchange privilege may be modified or terminated at any time, and is available only in those jurisdictions where such exchanges legally may be made. Before making any exchange, shareholders should contact the Miller Value Funds’ transfer agent or, if they hold Fund shares through a Financial Intermediary, their Financial Intermediary, to obtain more information and prospectuses of the Miller Value Funds to be acquired through the exchange. An exchange is treated as a sale of the shares exchanged and could result in taxable gain or loss to the shareholder making the exchange.

Grandfathered Retirement Program with Exchange Features

Certain retirement plan programs with exchange features in effect prior to November 20, 2006 (collectively, the “Grandfathered Retirement Program,”) that are authorized by the distributor to offer eligible retirement plan investors the opportunity to exchange all of their Class C shares for Class A shares of the Fund, are permitted to maintain such share class exchange feature for current and prospective retirement plan investors. Under the Grandfathered Retirement Program, Class C shares of the Fund may be purchased by plans investing less than \$3 million. Class C shares are eligible for exchange into Class A shares not later than eight years after the plan joins the program. They are eligible for exchange in the following circumstances:

For participating plans established with the Fund or another fund in the Miller family of funds prior to June 2, 2003, if such plan’s total Class C holdings in all non-money market Miller Value Funds equal at least \$1,000,000 at the end of the fifth year after the date the participating plan enrolled in the Grandfathered Retirement Program, the participating plan will be permitted to exchange all of its Class C shares for Class A shares of the Funds. For participating plans established with the Fund or another fund in the Miller family of funds on or after June 2, 2003, if such plan’s total Class C holdings in all non-money market the Miller Value Funds equal at least \$3,000,000 at the end of the fifth year after the date the participating plan enrolled in the Grandfathered Retirement Program, the participating plan will be permitted to exchange all of its Class C shares for Class A shares of the Fund.

Unless the exchange offer has been rejected in writing, the exchange will automatically occur within approximately 30 days after the fifth anniversary date. If the participating plan does not qualify for the five-year exchange to Class A shares, a review of the participating plan’s holdings will be performed each quarter until either the participating plan qualifies or the end of the eighth year.

Any participating plan that has not previously qualified for an exchange into Class A shares will be offered the opportunity to exchange all of its Class C shares for Class A shares of the same Fund regardless of asset size at the end of the eighth year after the date the participating plan enrolled in the Grandfathered Retirement Program. Unless the exchange has been rejected in writing, the exchange will automatically occur on or about the eighth anniversary date. Once an exchange has occurred, a participating plan will not be eligible to acquire additional Class C shares, but instead may acquire Class A shares of the same Fund. Any Class C shares not converted will continue to be subject to the distribution fee.

For further information regarding the Grandfathered Retirement Program, contact your Financial Intermediary or the transfer agent. Participating plans that enrolled in the Grandfathered Retirement Program prior to June 2, 2003 should contact the transfer agent for information regarding Class C exchange privileges applicable to their plan.

Distribution Plan

The Fund has adopted a Distribution Plan (the “Plan”) pursuant to Rule 12b-1 under the 1940 Act under which the Fund’s Classes pay the Distributor an amount which is accrued daily and paid quarterly, at the following rates of the average daily net assets of the Fund:

Class A	Class C	Class FI	Class I	Class IS
0.25%	1.00%	0.25%	N/A	N/A

Amounts paid under the Plan, by the Fund, are paid to the Distributor to reimburse it for costs of the services it provides and the expenses it bears in the distribution of the Fund’s shares, including overhead and telephone expenses; printing and distribution of prospectuses and reports used in connection with the offering of the Fund’s shares to prospective investors; and preparation, printing and distribution of sales literature and advertising materials. Such fee is paid to the Distributor each year only to the extent of such costs and expenses of the Distributor under the Plan actually incurred in that year. In addition, payments to the Distributor under the Plan reimburse the Distributor for payments it makes to selected dealers

and administrators which have entered into Service Agreements with the Distributor of periodic fees for services provided to shareholders of the Fund. The services provided by selected dealers pursuant to the Plan are primarily designed to promote the sale of shares of the Fund and include the furnishing of office space and equipment, telephone facilities, personnel and assistance to the Fund in servicing such shareholders. The services provided by the administrators pursuant to the Plan are designed to provide support services to the Fund and include establishing and maintaining shareholders' accounts and records, processing purchase and redemption transactions, answering routine client inquiries regarding the Fund and providing other services to the Fund as may be required.

Under the Plan, the Trustees will be furnished quarterly with information detailing the amount of expenses paid under the Plan and the purposes for which payments were made. The Plan may be terminated at any time by vote of a majority of the Trustees of the Trust who are not interested persons. Continuation of the Plan is considered by such Trustees no less frequently than annually. With the exception of the Distributor and the Adviser, in their capacities as the Fund's principal underwriter and distribution coordinator, respectively, no interested person has or had a direct or indirect financial interest in the Plan or any related agreement.

While there is no assurance that the expenditures of the Fund's assets to finance distribution of shares will have the anticipated results, the Board believes there is a reasonable likelihood that one or more of such benefits will result, and because the Board is in a position to monitor the distribution expenses, it is able to determine the benefit of such expenditures in deciding whether to continue the Plan.

Any material amendment to the Plan must be approved by the Board, including a majority of the Independent Trustees, or by a vote of a "majority" (as defined in the 1940 Act) of the outstanding voting securities of the applicable class or classes. The Plan may be terminated, with respect to a class or classes of the Fund, without penalty at any time: (1) by vote of a majority of the Board, including a majority of the Independent Trustees; or (2) by a vote of a "majority" (as defined in the 1940 Act) of the outstanding voting securities of the applicable class or classes.

The following service and distribution fees were incurred by the Fund pursuant to the distribution plan in effect during the fiscal year ended September 30, 2017:

Class	Service and Distribution Fees Incurred
Class A	\$26,249
Class C	\$244,831
Class FI	\$64

For the fiscal year ended September 30, 2017, the Fund paid distribution expenses for advertising, printing and mailing prospectuses, support services and overhead expenses and compensation to Financial Intermediaries and third parties as expressed in the following table.

Class	Third Party Fees	Financial Consultant Compensation (Amortized)	Marketing	Printing	Total
Class A	\$21,314	\$0	\$4,935	\$0	\$26,249
Class C	\$202,944	\$26,517	\$15,322	\$49	\$244,832
Class FI	\$0	\$0	\$64	\$0	\$64

Determination of Share Price

The NAV of the Fund is determined as of the close of regular trading on the New York Stock Exchange (the "NYSE") (generally 4:00 p.m., Eastern Time), each day the NYSE is open for trading. However, the Fund's NAV may be calculated earlier if trading on the NYSE is restricted or as permitted by the SEC. The NYSE annually announces the days on which it will not be open for trading. It is expected that the NYSE will not be open for trading on the following holidays: New Year's Day, Martin Luther King, Jr. Day, Washington's Birthday/Presidents' Day, Good Friday, Memorial Day, Independence Day, Labor Day, Thanksgiving Day and Christmas Day. The NAV will not be calculated on days when the NYSE is closed for trading.

NAV is calculated by adding the value of all securities and other assets attributable to the Fund (including interest and dividends accrued, but not yet received), then subtracting liabilities attributable to the Fund (including accrued expenses).

Generally, the Fund's investments are valued at market value or, in the absence of a market value, at fair value as determined in good faith by the Fund's Adviser with oversight by the Trust's Valuation Committee pursuant to procedures approved by or under the direction of the Board. Pursuant to those procedures, the Adviser considers, among other things: (1) the last sales price on the securities exchange, if any, on which a security is primarily traded; (2) the mean between the bid and asked prices; (3) price quotations from an approved pricing service; and (4) other factors as necessary to determine a fair value under certain circumstances.

Securities primarily traded in the NASDAQ Global Market® for which market quotations are readily available shall be valued using the NASDAQ® Official Closing Price ("NOCP"). If the NOCP is not available, such securities shall be valued at the last sale price on the day of valuation, or if there has been no sale on such day, at the mean between the bid and asked prices. OTC securities which are not traded in the NASDAQ Global Market® shall be valued at the most recent sales price. Securities and assets for which market quotations are not readily available (including restricted securities which are subject to limitations as to their sale) are valued at fair value as determined in good faith under procedures approved by or under the direction of the Board.

Short-term debt obligations with remaining maturities in excess of 60 days are valued at current market prices, as discussed above.

The Fund's securities, including ADRs, EDRs and GDRs, which are traded on securities exchanges are valued at the last sale price on the exchange on which such securities are traded, as of the close of business on the day the securities are being valued or, lacking any reported sales, at the mean between the last available bid and asked price. Securities that are traded on more than one exchange are valued on the exchange determined by the Adviser to be the primary market.

In the case of foreign securities, the occurrence of certain events after the close of foreign markets, but prior to the time the Fund's NAV is calculated (such as a significant surge or decline in the U.S. or other markets) often will result in an adjustment to the trading prices of foreign securities when foreign markets open on the following business day. If such events occur, the Fund will value foreign securities at fair value, taking into account such events, in calculating the NAV. In such cases, use of fair valuation can reduce an investor's ability to seek to profit by estimating the Fund's NAV in advance of the time the NAV is calculated. The Adviser anticipates that the Fund's portfolio holdings will be fair valued only if market quotations for those holdings are considered unreliable or are unavailable.

An option that is written or purchased by the Fund shall be valued using composite pricing via the National Best Bid and Offer quotes. Composite pricing looks at the last trade on the exchange where the option is traded. If there are no trades for an option on a given business day, as of closing, the Fund will value the option at the mean of the highest bid price and lowest ask price across the exchanges where the option is traded. For options where market quotations are not readily available, fair value shall be determined by the Fund's Adviser with oversight by the Trust's Valuation Committee.

All other assets of the Fund are valued in such manner as the Board in good faith deems appropriate to reflect their fair value.

Tax Information

The following is only a summary of certain additional U.S. federal income tax considerations generally affecting the Fund and its shareholders that is intended to supplement the discussion contained in the Fund's prospectus. No attempt is made to present a detailed explanation of the tax treatment of the Fund or its shareholders, and the discussion here and in the Fund's prospectus is not intended as a substitute for careful tax planning.

Fund shares held in a tax-qualified retirement account will generally not be subject to federal taxation on income and capital gains distributions from the Fund until a shareholder begins receiving payments from their retirement account. Because each shareholder's tax situation is different, shareholders should consult their tax advisors with specific reference to their own tax situations, including their state, local, and foreign tax liabilities.

The following general discussion of certain federal income tax consequences is based on the Internal Revenue Code of 1986, as amended (the "Code") and the regulations issued thereunder as in effect on the date of this SAI. New legislation, as well as administrative changes or court decisions, may significantly change the conclusions expressed herein, and may have a retroactive effect with respect to the transactions contemplated herein.

The recently enacted Tax Cuts and Jobs Act (the “Tax Act”) makes significant changes to the U.S. federal income tax rules for taxation of individuals and corporations, generally effective for taxable years beginning after December 31, 2017. Many of the changes applicable to individuals are temporary and would apply only to taxable years beginning after December 31, 2017 and before January 1, 2026. There are only minor changes specifically with respect to the regulated investment company rules, but the Tax Act makes numerous other changes to the tax rules that may affect shareholders and the Fund. You are urged to consult with your own tax advisor regarding how the Tax Act affects your investment in the Fund.

Qualification as a Regulated Investment Company (“RIC”)

The Fund has elected to be, and has qualified and intends to qualify each year to be treated, as a RIC under Subchapter M of the Code. To qualify as a RIC, the Fund must, among other things: (a) derive at least 90% of its gross income in each taxable year from dividends, interest, payments with respect to certain securities loans, and gains from the sale or other disposition of stock or securities or foreign currencies, or other income (including, but not limited to, gains from options, futures or forward contracts) derived with respect to its business of investing in such stock, securities or currencies, and net income derived from interests in “qualified publicly traded partnerships” (*i.e.*, partnerships that are traded on an established securities market or tradable on a secondary market, other than partnerships that derive 90% of their income from interest, dividends, capital gains, and other traditionally permitted mutual fund income) (“Qualifying Income Test”); and (b) diversify its holdings so that, at the end of each quarter of the Fund’s taxable year, (i) at least 50% of the market value of the Fund’s assets is represented by cash, securities of other RICs, U.S. government securities and other securities, with such other securities limited, in respect of any one issuer, to an amount not greater than 5% of the Fund’s assets and not greater than 10% of the outstanding voting securities of such issuer and (ii) not more than 25% of the value of its assets is invested, including through corporations in which the Fund owns a 20% or more voting stock interest, in the securities (other than U.S. government securities or securities of other RICs) of any one issuer, in the securities (other than the securities of other RICs) of any two or more issuers that the Fund controls and that are determined to be engaged in the same or similar trades or businesses or related trades or businesses, or in the securities of one or more “qualified publicly traded partnerships” (“Asset Test”).

As a RIC, the Fund will not be subject to U.S. federal income tax on the portion of its taxable investment income and capital gains that it timely distributes to its shareholders, provided that it satisfies a minimum distribution requirement. To satisfy the minimum distribution requirement, the Fund must distribute to its shareholders at least the sum of (i) 90% of its “investment company taxable income” (*i.e.*, generally, its taxable income other than its net capital gain, computed without regard to the dividends-paid deduction, plus or minus certain other adjustments), and (ii) 90% of its net tax-exempt income for the taxable year. The Fund will be subject to income tax at regular corporate tax rates on any taxable income or gains that it does not distribute to its shareholders. The Fund’s policy is to distribute to its shareholders all of its investment company taxable income (computed without regard to the dividends-paid deduction) and any net realized long-term capital gains for each fiscal year in a manner that complies with the distribution requirements of the Code, so that the Fund will not be subject to any federal income or excise taxes. However, the Fund can give no assurances that distributions will be sufficient to eliminate all taxes.

If, for any taxable year, the Fund was to fail to qualify as a RIC under the Code or were to fail to meet the distribution requirement, it would be taxed in the same manner as an ordinary corporation at corporate income tax rates (which the Tax Act reduced to 21%) and distributions to its shareholders would not be deductible by the Fund in computing its taxable income. In addition, in the event of a failure to qualify, the Fund’s distributions, to the extent derived from the Fund’s current and accumulated earnings and profits, including any distributions of net tax-exempt interest income and net long-term capital gains, would be taxable to shareholders as ordinary dividend income for federal income tax purposes. However, such dividends would be eligible, subject to any generally applicable limitations, (i) to be treated as qualified dividend income in the case of shareholders taxed as individuals and (ii) for the dividends-received deduction in the case of corporate shareholders. Moreover, if the Fund were to fail to qualify as a RIC in any year, it would be required to pay out its earnings and profits accumulated in that year in order to qualify again as a RIC. Under certain circumstances, the Fund may cure a failure to qualify as a RIC, but in order to do so the Fund may incur significant Fund-level taxes and may be forced to dispose of certain assets. If the Fund failed to qualify as a RIC for a period greater than two taxable years, the Fund would generally be required to recognize, and would generally be subject to a corporate-level tax with respect to, any net built-in gains with respect to certain of its assets upon a disposition of such assets within five years of qualifying as a RIC in a subsequent year.

Federal Excise Tax

The Fund will be subject to a nondeductible 4% federal excise tax to the extent it fails to distribute by the end of the calendar year at least 98% of its ordinary income and 98.2% of its capital gain net income (the excess of short- and long-term capital gains over short- and long-term capital losses) for the one-year period ending on October 31 of such year (including any retained amount from the prior calendar year on which a Fund paid no federal income tax).

The Fund intends to make sufficient distributions to avoid liability for federal excise tax, but can make no assurances that such tax will be completely eliminated. The Fund may in certain circumstances be required to liquidate Fund investments in order to make sufficient distributions to avoid federal excise tax liability at a time when the investment adviser might not otherwise have chosen to do so, and liquidation of investments in such circumstances may affect the ability of the Fund to satisfy the requirements for qualification as a RIC.

Miller Income Fund Capital Losses.

The Fund may elect to treat part or all of any “qualified late year loss” as if it had been incurred in the succeeding taxable year in determining the Fund’s taxable income, net capital gain, net short-term capital gain, and earnings and profits. The effect of this election is to treat any such “qualified late year loss” as if it had been incurred in the succeeding taxable year in characterizing Fund distributions for any calendar year. A “qualified late year loss” generally includes net capital loss, net long-term capital loss, or net short-term capital loss incurred after October 31 of the current taxable year (commonly referred to as “post-October losses”) and certain other late-year losses.

For U.S. federal income tax purposes, unused capital loss carryforwards that arose in tax years that began on or before December 22, 2010 (“Pre-2011 Losses”) are available to be applied against future capital gains, if any, realized by the Fund prior to the expiration of the carryforwards. If the Fund has a “net capital loss” (that is, capital losses in excess of capital gains) for a taxable year beginning after December 22, 2010 (a “Post-2010 Loss”), the excess of the Fund’s net short-term capital losses over its net long-term capital gains is treated as a short-term capital loss arising on the first day of the Fund’s next taxable year, and the excess (if any) of the Fund’s net long-term capital losses over its net short-term capital gains is treated as a long-term capital loss arising on the first day of the Fund’s next taxable year. Post-2010 Losses of the Fund can be carried forward indefinitely to offset capital gains, if any, in years following the year of the loss, and such carryforwards must be utilized before the Fund can utilize any carryforwards of Pre-2011 Losses. In addition, the carryover of capital losses may be limited under the general loss limitation rules if the Fund experiences an ownership change as defined in the Code.

As of September 30, 2017, the Fund had deferred capital losses of \$14,594,865. These capital losses have been deferred in the current year as either short-term or long-term losses. The losses will be deemed to occur on the first day of the next taxable year in the same character as they were originally deferred and will be available to offset future taxable capital gains.

Distributions to Shareholders

The Fund receives income generally in the form of dividends and interest on investments. This income, plus net short-term capital gains, if any, less expenses incurred in the operation of the Fund, constitutes the Fund’s net investment income from which dividends may be paid to you. Net realized capital gains for a fiscal period are computed by taking into account any capital loss carryforward of the Fund. Taxable dividends and distributions are subject to tax whether you receive them in cash or in additional shares.

Distributions of net investment income, including distributions of net short-term capital gains, are taxable to shareholders as ordinary income or, for non-corporate shareholders, as qualified dividend income. Distributions from the Fund’s net capital gain (*i.e.*, the excess of the Fund’s net long-term capital gains over its net short-term capital losses) are taxable to shareholders as long-term capital gains regardless of the length of time shares have been held. In general, to the extent that the Fund receives qualified dividend income, the Fund may report a portion of the dividends it pays as qualified dividend income, which for noncorporate shareholders is subject to U.S. federal income tax rates of up to 20%. Qualified dividend income is, in general, dividend income from taxable domestic corporations and certain foreign corporations (*i.e.*, foreign corporations incorporated in a possession of the United States or in certain countries with a comprehensive tax treaty with the United States, and foreign corporations if the stock with respect to which the dividend was paid is readily tradable on an established securities market in the United States). A dividend will not be treated as qualified dividend income to the extent that (i) the shareholder has not held the shares on which the dividend was paid for more than 60 days during the 121-day period that begins on the date that is 60 days before the date on which the shares become “ex-dividend” with respect to such dividend, (ii) the shareholder is under an obligation (whether pursuant to a short sale or otherwise) to make related payments with respect to substantially similar or related property, or (iii) the shareholder elects to treat such dividend as investment income under section 163(d)(4)(B) of the Code. The holding period requirements described in this paragraph apply to shareholders’ investments in the Fund and to the Fund’s investments in underlying dividend-paying stocks. Distributions received by the Fund from another regulated investment company will be treated as qualified dividend income only to the extent so reported by such other regulated investment company. If 95% or more of the Fund’s gross income (calculated without taking into account net capital gain derived from sales or other dispositions of stock or securities) consists of qualified dividend income, the Fund may report all distributions of such income as qualified dividend income.

Dividends paid by the Fund that are attributable to dividends received by the Fund from domestic corporations may qualify for the dividends-received deduction for corporate shareholders of the Fund.

There is no requirement that the Fund take into consideration any tax implications when implementing its investment strategy. If the Fund's distributions exceed its earnings and profits, all or a portion of the distributions may be treated as a return of capital to shareholders. A return of capital distribution generally will not be taxable but will reduce each shareholder's tax basis, resulting in a higher capital gain or lower capital loss when the shares on which the distribution was received are sold. After a shareholder's tax basis in the shares has been reduced to zero, distributions in excess of earnings and profits will be treated as gain from the sale of the shareholder's shares.

Each shareholder who receives taxable distributions in the form of additional shares will be treated for U.S. federal income tax purposes as if receiving a distribution in an amount equal to the amount of money that the shareholder would have received if he or she had instead elected to receive cash distributions. The shareholder's aggregate tax basis in shares of the Fund will be increased by such amount.

A dividend or distribution received shortly after the purchase of shares reduces the net asset value of the shares by the amount of the dividend or distribution and, although in effect a return of capital, will be taxable to the shareholder. If the net asset value of shares were reduced below the shareholder's cost by dividends or distributions representing gains realized on sales of securities, such dividends or distributions would be a return of investment though taxable to the shareholder in the same manner as other dividends or distributions.

A dividend or other distribution by the Fund is generally treated under the Code as received by the shareholders at the time the dividend or distribution is made. However, distributions declared in October, November or December to shareholders of record on a date in such a month and paid the following January are taxable as if received on December 31. Distributions are includable in alternative minimum taxable income of non-corporate shareholders in computing such shareholder's liability for the alternative minimum tax. Shareholders should note that the Fund may make taxable distributions of income and capital gains even when share values have declined.

The Fund (or its administrative agent) will inform you of the amount of your ordinary income dividends, qualified dividend income and capital gain distributions, if any, and will advise you of their tax status for federal income tax purposes shortly after the close of each calendar year. If you have not held your shares for a full year, the Fund may designate and distribute to you, as ordinary income, qualified dividend income or capital gain, a percentage of income that is not equal to the actual amount of such income earned during the period of your investment in the Fund.

Sales, Exchanges or Redemptions

Any gain or loss recognized on a sale, exchange, or redemption of shares of the Fund by a shareholder who is not a dealer in securities will generally, for individual shareholders, be treated as a long-term capital gain or loss if the shares have been held for more than twelve months and otherwise will be treated as a short-term capital gain or loss.

Any loss realized upon redemption of shares within six months from the date of their purchase will be treated as a long term capital loss to the extent of any amounts treated as distributions of long term capital gains during such six month period. Any loss realized upon a redemption may be disallowed under certain wash sale rules to the extent shares of the Fund are purchased (through reinvestment of distributions or otherwise) within 30 days before or after the redemption.

A 3.8% Medicare contribution tax generally applies to all or a portion of the net investment income of a shareholder who is an individual and not a nonresident alien for federal income tax purposes and who has adjusted gross income (subject to certain adjustments) that exceeds a threshold amount (\$250,000 if married filing jointly or if considered a "surviving spouse" for federal income tax purposes, \$125,000 if married filing separately, and \$200,000 in other cases). This 3.8% tax also applies to all or a portion of the undistributed net investment income of certain shareholders that are estates and trusts. For these purposes, dividends, interest and certain capital gains (among other categories of income) are generally taken into account in computing a shareholder's net investment income.

Under the Code, the Fund will be required to report to the Internal Revenue Service (the "IRS") all distributions of taxable income and capital gains as well as gross proceeds from the redemption of Fund shares, except in the case of exempt shareholders, which includes most corporations. The Fund will also be required to report tax basis information for such shares and indicate whether these shares had a short-term or long-term holding period. If a shareholder has a different basis for different shares of the Fund in the same account (e.g., if a shareholder purchased shares in the same account at different times for different prices), the Fund will calculate the basis of the shares sold using its default method unless the shareholder has properly elected to use a different method. The Fund's default method for calculating basis will be the average basis method, under which the basis per share is reported as the average of the bases of all of the shareholder's

Fund shares in the account. A shareholder may elect, on an account-by-account basis, to use a method other than average basis by following procedures established by the Fund or its administrative agent. If such an election is made on or prior to the date of the first exchange or redemption of shares in the account and on or prior to the date that is one year after the shareholder receives notice of the Fund's default method, the new election will generally apply as if the average basis method had never been in effect for such account. If such an election is not made on or prior to such dates, the shares in the account at the time of the election will retain their averaged bases. Shareholders should consult their tax advisers concerning the tax consequences of applying the average basis method or electing another method of basis calculation.

Tax Treatment of Complex Securities

The Fund may invest in complex securities and these investments may be subject to numerous special and complex tax rules. These rules could affect the Fund's ability to qualify as a RIC, affect whether gains and losses recognized by the Fund are treated as ordinary income or capital gain, accelerate the recognition of income to the Fund and/or defer the Fund's ability to recognize losses, and, in limited cases, subject the Fund to U.S. federal income tax on income from certain of its foreign securities. In turn, these rules may affect the amount, timing or character of the income distributed to you by the Fund.

With respect to investments in STRIPS, Treasury Receipts, and other zero coupon securities which are sold at original issue discount and thus do not make periodic cash interest payments, the Fund will be required to include as part of its current income the imputed interest on such obligations even though the Fund has not received any interest payments on such obligations during that period. Because the Fund intends to distribute all of its net investment income to its shareholders, the Fund may have to sell Fund securities to distribute such imputed income which may occur at a time when the Adviser would not have chosen to sell such securities and which may result in taxable gain or loss.

Any market discount recognized on a bond is taxable as ordinary income. A market discount bond is a bond acquired in the secondary market at a price below redemption value or adjusted issue price if issued with original issue discount. Absent an election by the Fund to include the market discount in income as it accrues, gain on the Fund's disposition of such an obligation will be treated as ordinary income rather than capital gain to the extent of the accrued market discount.

The Fund may invest in, or hold, debt obligations that are in the lowest rating categories or that are unrated, including debt obligations of issuers not currently paying interest or that are in default. Investments in debt obligations that are at risk of or are in default present special tax issues for the Fund. Federal income tax rules are not entirely clear about issues such as when the Fund may cease to accrue interest, original issue discount or market discount, when and to what extent deductions may be taken for bad debts or worthless securities, how payments received on obligations in default should be allocated between principal and interest and whether certain exchanges of debt obligations in a workout context are taxable. These and other issues will be addressed by the Fund, in the event it invests in or holds such securities, in order to seek to ensure that it distributes sufficient income to preserve its status as a regulated investment company and does not become subject to U.S. federal income or excise tax.

In general, for purposes of the Qualifying Income Test described above, income derived from a partnership will be treated as qualifying income only to the extent such income is attributable to items of income of the partnership that would be qualifying income if realized directly by the Fund. However, 100% of the net income derived from an interest in a "qualified publicly traded partnership" (generally, a partnership (i) interests in which are traded on an established securities market or are readily tradable on a secondary market or the substantial equivalent thereof, (ii) that derives at least 90% of its income from the passive income sources specified in Code section 7704(d), and (iii) that derives less than 90% of its income from the same sources as described in the Qualifying Income test) will be treated as qualifying income. In addition, although in general the passive loss rules of the Code do not apply to RICs, such rules do apply to a RIC with respect to items attributable to an interest in a qualified publicly traded partnership.

The Fund may invest in certain MLPs which may be treated as qualified publicly traded partnerships. Income from qualified publicly traded partnerships is qualifying income for purposes of the Qualifying Income Test, but the Fund's investment in one or more of such qualified publicly traded partnerships is limited under the Asset Test to no more than 25% of the value of the Fund's assets. The Fund will monitor its investment in such qualified publicly traded partnerships in order to ensure compliance with the Qualifying Income and Asset Tests. MLPs and other partnerships that the Fund may invest in will deliver Form K-1s to the Fund to report its share of income, gains, losses, deductions and credits of the MLP or other partnership. These Form K-1s may be delayed and may not be received until after the time that the Fund issues its tax reporting statements. As a result, the Fund may at times find it necessary to reclassify the amount and character of its distributions to you after it issues your tax reporting statement.

The Tax Act treats “qualified publicly traded partnership income” within the meaning of Section 199A(e)(5) of the Code as eligible for a 20% deduction by non-corporate taxpayers. Qualified publicly traded partnership income is generally income of a “publicly traded partnership” that is not treated as a corporation for U.S. federal income tax purposes that is effectively connected with such entity’s trade or business, but does not include certain investment income. A “publicly traded partnership” for purposes of this deduction is not the same as a “qualified publicly traded partnership” as defined in the immediately preceding paragraphs. This deduction, if allowed in full, equates to a maximum effective tax rate of 29.6% (37% top rate applied to income after 20% deduction). The Tax Act does not contain a provision permitting a regulated investment company, such as the Fund, to pass the special character of this income through to its shareholders. Currently, direct investors in entities that generate “qualified publicly traded partnership income” will enjoy the lower rate, but investors in regulated investment companies that invest in such entities will not. It is uncertain whether a future technical corrections bill will address this issue to enable the Fund to pass through the special character of “qualified publicly traded partnership income” to shareholders.

The Fund may invest in REITs. Investments in REIT equity securities may require the Fund to accrue and distribute income not yet received. To generate sufficient cash to make the requisite distributions, the Fund may be required to sell securities in its portfolio (including when it is not advantageous to do so) that it otherwise would have continued to hold. The Fund’s investments in REIT equity securities may at other times result in the Fund’s receipt of cash in excess of the REIT’s earnings; if the Fund distributes these amounts, these distributions could constitute a return of capital to the Fund’s shareholders for federal income tax purposes. Dividends paid by a REIT, other than capital gain distributions, will be taxable as ordinary income up to the amount of the REIT’s current and accumulated earnings and profits. Capital gain dividends paid by a REIT to the Fund will be treated as long-term capital gains by the Fund and, in turn, may be distributed by the Fund to its shareholders as a capital gain distribution. Dividends received by the Fund from a REIT generally will not constitute qualified dividend income or qualify for the dividends received deduction. If a REIT is operated in a manner such that it fails to qualify as a REIT, an investment in the REIT would become subject to double taxation, meaning the taxable income of the REIT would be subject to federal income tax at regular corporate rates without any deduction for dividends paid to shareholders and the dividends would be taxable to shareholders as ordinary income (or possibly as qualified dividend income) to the extent of the REIT’s current and accumulated earnings and profits.

The Tax Act treats “qualified REIT dividends” (i.e., ordinary REIT dividends other than capital gain dividends and portions of REIT dividends designated as qualified dividend income eligible for capital gain tax rates) as eligible for a 20% deduction by non-corporate taxpayers. This deduction, if allowed in full, equates to a maximum effective tax rate of 29.6% (37% top rate applied to income after 20% deduction). The Tax Act does not contain a provision permitting a regulated investment company, such as the Fund, to pass the special character of this income through to its shareholders. Currently, direct investors in REITs will enjoy the lower rate, but investors in RICs that invest in such REITs will not. It is uncertain whether a future technical corrections bill will address this issue to enable the Fund to pass through the special character of “qualified REIT dividends” to shareholders.

REITs in which the Fund invests often do not provide complete and final tax information to the Fund until after the time that the Fund issues a tax reporting statement. As a result, the Fund may at times find it necessary to reclassify the amount and character of its distributions to you after it issues your tax reporting statement. When such reclassification is necessary, the Fund (or its administrative agent) will send you a corrected, final Form 1099-DIV to reflect the reclassified information. If you receive a corrected Form 1099-DIV, use the information on this corrected form, and not the information on the previously issued tax reporting statement, in completing your tax returns.

If the Fund owns shares in certain foreign investment entities, referred to as “passive foreign investment companies” or “PFICs,” the Fund will generally be subject to one of the following special tax regimes: (i) the Fund may be liable for U.S. federal income tax, and an additional interest charge, on a portion of any “excess distribution” from such foreign entity or any gain from the disposition of such shares, even if the entire distribution or gain is paid out by the Fund as a dividend to its shareholders; (ii) if the Fund were able and elected to treat a PFIC as a “qualified electing fund” or “QEF,” the Fund would be required each year to include in income, and distribute to shareholders in accordance with the distribution requirements set forth above, the Fund’s pro rata share of the ordinary earnings and net capital gains of the PFIC, whether or not such earnings or gains are distributed to the Fund; or (iii) the Fund may be entitled to mark-to-market annually shares of the PFIC, and in such event would be required to distribute to shareholders any such mark-to-market gains in accordance with the distribution requirements set forth above. The Fund intends to make the appropriate tax elections, if possible, and take any additional steps that are necessary to mitigate the effect of these rules.

The Fund may be subject to foreign withholding taxes on dividends and interest earned with respect to securities of foreign corporations. Tax conventions between certain countries and the U.S. may reduce or eliminate such taxes in some cases. Foreign countries generally do not impose taxes on capital gains with respect to investments by foreign investors. If more than 50% of the value of a Fund’s total assets at the close of their taxable year consists of stocks or securities of foreign

corporations, the Fund will be eligible to and intends to file an election with the IRS that may enable shareholders, in effect, to receive either the benefit of a foreign tax credit, or a deduction from such taxes, with respect to any foreign and U.S. possessions income taxes paid by the Fund, subject to certain limitations.

Tax Shelter Reporting Regulations

Under Treasury regulations, if a shareholder recognizes a loss with respect to the Fund's shares of \$2 million or more for an individual shareholder, or \$10 million or more for a corporate shareholder, in any single year (or certain greater amounts over a combination of years), the shareholder must file with the IRS a disclosure statement on IRS Form 8886. Direct shareholders of portfolio securities are in many cases excepted from this reporting requirement, but under current guidance, shareholders of a regulated investment company are not excepted. A shareholder who fails to make the required disclosure to the IRS may be subject to substantial penalties. The fact that a loss is reportable under these regulations does not affect the legal determination of whether the taxpayer's treatment of the loss is proper. Shareholders should consult their tax advisors to determine the applicability of these regulations in light of their individual circumstances.

Backup Withholding

Pursuant to the backup withholding provisions of the Code, distributions of any taxable income and capital gains and proceeds from the redemption of Fund shares may be subject to withholding of federal income tax at the rate of 24% in the case of non-exempt shareholders who fail to furnish the Fund with their taxpayer identification numbers or with required certifications regarding their status under the federal income tax law, or if the IRS notifies the Fund that such backup withholding is required. If the withholding provisions are applicable, any such distributions and proceeds, whether taken in cash or reinvested in additional shares, will be reduced by the amounts required to be withheld. Corporate and other exempt shareholders should provide the Fund with their taxpayer identification numbers or certify their exempt status in order to avoid possible erroneous application of backup withholding. Backup withholding is not an additional tax and any amounts withheld may be credited against a shareholder's ultimate federal income tax liability if proper documentation is provided. The Fund reserves the right to refuse to open an account for any person failing to provide a certified taxpayer identification number.

Tax-Exempt Shareholders

Certain tax-exempt shareholders, including qualified pension plans, individual retirement accounts, salary deferral arrangements, 401(k)s, and other tax-exempt entities, generally are exempt from federal income taxation except with respect to their unrelated business taxable income ("UBTI"). Under current law, the Fund generally serves to block UBTI from being realized by tax-exempt shareholders. Under the Tax Act, tax-exempt entities are not permitted to offset losses from one trade or business against the income or gain of another trade or business. Certain net losses incurred prior to January 1, 2018 are permitted to offset gain and income created by an unrelated trade or business, if otherwise available. However, notwithstanding that the Fund generally blocks UBTI, a tax-exempt shareholder could realize UBTI by virtue of an investment in the Fund where, for example: (i) the Fund invests in residual interests of Real Estate Mortgage Investment Conduits ("REMICs"), (ii) the Fund invests in a REIT that is a taxable mortgage pool ("TMP") or that has a subsidiary that is a TMP or that invests in the residual interest of a REMIC, or (iii) shares in the Fund constitute debt-financed property in the hands of the tax-exempt shareholder within the meaning of section 514(b) of the Code. Charitable remainder trusts are subject to special rules and should consult their tax advisor. The IRS has issued guidance with respect to these issues and prospective shareholders, especially charitable remainder trusts, are strongly encouraged to consult their tax advisors regarding these issues.

The foregoing discussion of U.S. federal income tax law relates solely to the application of that law to U.S. citizens or residents and U.S. domestic corporations, partnerships, trusts and estates.

Non-U.S. Investors

Any non-U.S. investors in the Fund may be subject to U.S. withholding and estate tax and are encouraged to consult their tax advisors prior to investing in the Fund. Foreign shareholders (i.e., nonresident alien individuals and foreign corporations, partnerships, trusts and estates) are generally subject to U.S. withholding tax at the rate of 30% (or a lower tax treaty rate) on distributions derived from taxable ordinary income. The Fund may, under certain circumstances, report all or a portion of a dividend as an "interest-related dividend" or a "short-term capital gain dividend," which would generally be exempt from this 30% U.S. withholding tax, provided certain other requirements are met. Short-term capital gain dividends received by a nonresident alien individual who is present in the U.S. for a period or periods aggregating 183 days or more during the taxable year are not exempt from this 30% withholding tax. Gains realized by foreign shareholders from the sale or other disposition of shares of the Fund generally are not subject to U.S. taxation, unless the recipient is an individual who is physically present in the U.S. for 183 days or more per year. Foreign shareholders who fail to provide an applicable IRS form may be subject to backup withholding on certain payments from the Fund. Backup withholding will not be applied to payments that are subject to the 30% (or lower applicable treaty rate) withholding tax described in this paragraph. Different tax consequences may result if the foreign shareholder is engaged in a trade or business within the United States. In

addition, the tax consequences to a foreign shareholder entitled to claim the benefits of a tax treaty may be different than those described above.

Under legislation generally known as “FATCA” (the Foreign Account Tax Compliance Act), the Fund is required to withhold 30% of certain ordinary dividends it pays, and, after December 31, 2018, 30% of the gross proceeds of share redemptions and certain Capital Gain Dividends it pays, to shareholders that fail to meet prescribed information reporting or certification requirements. In general, no such withholding will be required with respect to a U.S. person or non-U.S. individual that timely provides the certifications required by the Fund or its agent on a valid IRS Form W-9 or applicable IRS Form W-8, respectively. Shareholders potentially subject to withholding include foreign financial institutions (“FFIs”), such as non-U.S. investment funds, and non-financial foreign entities (“NFFEs”). To avoid withholding under FATCA, an FFI generally must enter into an information sharing agreement with the IRS in which it agrees to report certain identifying information (including name, address, and taxpayer identification number) with respect to its U.S. account holders (which, in the case of an entity shareholder, may include its direct and indirect U.S. owners), and an NFFE generally must identify and provide other required information to the Fund or other withholding agent regarding its U.S. owners, if any. Such non-U.S. shareholders also may fall into certain exempt, excepted or deemed compliant categories as established by regulations and other guidance. A non-U.S. shareholder resident or doing business in a country that has entered into an intergovernmental agreement with the U.S. to implement FATCA will be exempt from FATCA withholding provided that the shareholder and the applicable foreign government comply with the terms of the agreement.

A non-U.S. entity that invests in the Fund will need to provide the Fund with documentation properly certifying the entity's status under FATCA in order to avoid FATCA withholding. Non-U.S. investors in the Fund should consult their tax advisors in this regard

Tax-Deferred Qualified Plans—Class A and Class C Shares

Investors may invest in Class A and Class C shares of the fund through IRAs, simplified employee pension plans (“SEPs”), savings incentive match plans for employees (“SIMPLES”), other qualified retirement plans and Coverdell ESAs (collectively, “qualified plans”). In general, income earned through the investment of assets of qualified plans is not taxed to their beneficiaries until the income is distributed to those beneficiaries (or, in the case of Roth IRAs and Coverdell ESAs, not at all if certain conditions are satisfied). Investors who are considering establishing a qualified plan should consult their attorneys or other tax advisers with respect to individual tax questions. Please consult your financial adviser for further information with respect to these plans.

Individual Retirement Account—IRA

TRADITIONAL IRA. Certain Class A and Class C shareholders who receive compensation, including earnings from self-employment, may establish and make contributions to an IRA. Your IRA contributions can be tax-deductible if neither you nor your spouse is an active participant in a qualified employer or government retirement plan. If you or your spouse is an active participant in such a plan, your IRA contribution may be deductible, in whole or in part, depending on the amount of your and your spouse's combined adjusted gross income. In addition, all earnings grow tax-deferred until withdrawn, at which point distributions are taxed as ordinary income to you, usually after age 59 1/2, when you may be in a lower tax bracket. Withdrawals made before age 59 1/2 are generally subject to a 10% penalty.

ROTH IRA. Unlike a traditional IRA, a Roth IRA is only available to individuals who meet certain “modified adjusted gross income” (MAGI) limitations. Under certain circumstances, a traditional IRA may be converted to a Roth IRA; these conversions are, however, subject to federal income tax.

Contributions to a Roth IRA are not deductible; however, earnings accumulate tax-free in a Roth IRA, and withdrawals of earnings are not subject to federal income tax if the account has been held for at least five years (or, in the case of earnings attributable to a conversion of a traditional IRA, the conversion occurred more than five years before the withdrawal) and the account holder has reached age 59 1/2 (or certain other conditions apply).

Simplified Employee Pension Plan—SEP

The Adviser makes available to corporate and other employers a SEP for investment in Class A and Class C shares of the Fund.

Savings Incentive Match Plan for Employees—SIMPLE

An employer with no more than 100 employees that does not maintain another qualified retirement plan may establish a SIMPLE, either as a plan using separate IRAs or as part of a Code section 401(k) plan. A SIMPLE, which is not subject to the nondiscrimination rules that generally apply to other qualified retirement plans, allows certain employees to make elective contributions of up to certain amounts each year and requires the employer to make either matching contributions of up to 3% of each such employee's salary or a non-elective contribution of 2% of each such employees salary.

Coverdell Education Savings Account—Coverdell ESA

A Coverdell ESA provides a vehicle for saving for a child's education. A Coverdell ESA may be established for the benefit of any minor, and any person whose MAGI does not exceed certain levels may contribute to a Coverdell ESA, subject to certain annual limits on contributions. Contributions are not deductible and may not be made after the beneficiary reaches age 18; however, earnings accumulate tax-free, and withdrawals are not subject to tax if used to pay the qualified education expenses of the beneficiary (or a qualified family member).

For further information regarding any of the above qualified plans, including MAGI limitations, contact your financial adviser or tax adviser or the Fund at 1-888-593-5110.

Withholding

Withholding at the rate of 20% is required for federal income tax purposes on certain distributions (excluding, for example, certain periodic payments) from qualified retirement plans (except IRAs and SEPs), unless the recipient transfers the distribution directly to an "eligible retirement plan" (including an IRA or other qualified retirement plan) that accepts those distributions. Other distributions generally are subject to regular wage withholding or to withholding at the rate of 10% (depending on the type and amount of the distribution), unless the recipient elects not to have any withholding apply. Investors should consult their plan administrator or tax adviser for further information.

This discussion and the related discussion in the Prospectus have been prepared by Fund management. The information above is only a summary of some of the tax considerations generally affecting the Fund and its shareholders. No attempt has been made to discuss individual tax consequences and this discussion should not be construed as applicable to all shareholders' tax situations. Investors should consult their own tax advisors to determine the suitability of the Fund and the applicability of any state, local or foreign taxation.

Marketing and Support Payments

The Adviser, out of its own resources and without additional cost to the Fund or its shareholders, may provide additional cash payments or other compensation to certain Financial Intermediaries who sell shares of the Fund. Such payments may be divided into categories as follows:

Support Payments. Payments may be made by the Adviser to certain Financial Intermediaries in connection with the eligibility of the Fund to be offered in certain programs and/or in connection with meetings between the Fund's representatives and Financial Intermediaries and its sales representatives. Such meetings may be held for various purposes, including providing education and training about the Fund and other general financial topics to assist Financial Intermediaries' sales representatives in making informed recommendations to, and decisions on behalf of, their clients.

Entertainment, Conferences and Events. The Adviser also may pay cash or non-cash compensation to sales representatives of Financial Intermediaries in the form of (i) occasional gifts; (ii) occasional meals, tickets or other entertainments; and/or (iii) sponsorship support for the Financial Intermediary's client seminars and cooperative advertising. In addition, the Adviser pays for exhibit space or sponsorships at regional or national events of Financial Intermediaries.

The prospect of receiving, or the receipt of additional payments or other compensation as described above by Financial Intermediaries may provide such intermediaries and/or their salespersons with an incentive to favor sales of shares of the Fund, and other mutual funds whose affiliates make similar compensation available, over sale of shares of mutual funds (or non-mutual fund investments) not making such payments. You may wish to take such payment arrangements into account when considering and evaluating any recommendations relating to the Fund shares.

Anti-Money Laundering Program

The Trust has established an Anti-Money Laundering Program (the "Program") as required by the Uniting and Strengthening America by Providing Appropriate Tools Required to Intercept and Obstruct Terrorism Act of 2001 ("USA PATRIOT Act"). In order to ensure compliance with this law, the Trust's Program provides for the development of internal practices, procedures and controls, designation of anti-money laundering compliance officers, an ongoing training program and an independent audit function to determine the effectiveness of the Program.

Procedures to implement the Program include, but are not limited to, determining that the Fund's Distributor and Transfer Agent have established proper anti-money laundering procedures, reporting suspicious and/or fraudulent activity, checking shareholder names against designated government lists, including Office of Foreign Asset Control ("OFAC"), and a complete and thorough review of all new opening account applications. The Trust will not transact business with any person or legal entity whose identity and beneficial owners, if applicable, cannot be adequately verified under the provisions of the USA PATRIOT Act.

Financial Statements

The Fund's annual report to shareholders for the fiscal year ended September 30, 2017 is a separate document and the financial statements, accompanying notes and report of the independent registered public accounting firm appearing therein are incorporated by reference into this SAI.

Appendix A Description of Securities Ratings

Short-Term Credit Ratings

A *Standard & Poor's* short-term issue credit rating is a forward-looking opinion about the creditworthiness of an obligor with respect to a specific financial obligation having an original maturity of no more than 365 days. The following summarizes the rating categories used by Standard & Poor's for short-term issues:

“A-1” – A short-term obligation rated “A-1” is rated in the highest category and indicates that the obligor's capacity to meet its financial commitment on the obligation is strong. Within this category, certain obligations are designated with a plus sign (+). This indicates that the obligor's capacity to meet its financial commitment on these obligations is extremely strong.

“A-2” – A short-term obligation rated “A-2” is somewhat more susceptible to the adverse effects of changes in circumstances and economic conditions than obligations in higher rating categories. However, the obligor's capacity to meet its financial commitment on the obligation is satisfactory.

“A-3” – A short-term obligation rated “A-3” exhibits adequate protection parameters. However, adverse economic conditions or changing circumstances are more likely to lead to a weakened capacity of the obligor to meet its financial commitment on the obligation.

“B” – A short-term obligation rated “B” is regarded as vulnerable and has significant speculative characteristics. The obligor currently has the capacity to meet its financial commitments; however, it faces major ongoing uncertainties which could lead to the obligor's inadequate capacity to meet its financial commitments.

“C” – A short-term obligation rated “C” is currently vulnerable to nonpayment and is dependent upon favorable business, financial, and economic conditions for the obligor to meet its financial commitment on the obligation.

“D” – A short-term obligation rated “D” is in default or in breach of an imputed promise. For non-hybrid capital instruments, the “D” rating category is used when payments on an obligation are not made on the date due, unless Standard & Poor's believes that such payments will be made within any stated grace period. However, any stated grace period longer than five business days will be treated as five business days. The “D” rating also will be used upon the filing of a bankruptcy petition or the taking of a similar action and where default on an obligation is a virtual certainty, for example due to automatic stay provisions. An obligation's rating is lowered to “D” if it is subject to a distressed exchange offer.

Local Currency and Foreign Currency Risks – Standard & Poor's issuer credit ratings make a distinction between foreign currency ratings and local currency ratings. An issuer's foreign currency rating will differ from its local currency rating when the obligor has a different capacity to meet its obligations denominated in its local currency, vs. obligations denominated in a foreign currency.

Moody's Investors Service (“*Moody's*”) short-term ratings are forward-looking opinions of the relative credit risks of financial obligations with an original maturity of thirteen months or less and reflect the likelihood of a default on contractually promised payments. Ratings may be assigned to issuers, short-term programs or to individual short-term debt instruments.

Moody's employs the following designations to indicate the relative repayment ability of rated issuers:

“P-1” – Issuers (or supporting institutions) rated Prime-1 have a superior ability to repay short-term debt obligations.

“P-2” – Issuers (or supporting institutions) rated Prime-2 have a strong ability to repay short-term debt obligations.

“P-3” – Issuers (or supporting institutions) rated Prime-3 have an acceptable ability to repay short-term obligations.

“NP” – Issuers (or supporting institutions) rated Not Prime do not fall within any of the Prime rating categories.

Fitch, Inc. / Fitch Ratings Ltd. (“Fitch”) short-term issuer or obligation rating is based in all cases on the short-term vulnerability to default of the rated entity or security stream and relates to the capacity to meet financial obligations in accordance with the documentation governing the relevant obligation. Short-term ratings are assigned to obligations whose initial maturity is viewed as “short-term” based on market convention. Typically, this means up to 13 months for corporate, sovereign and structured obligations, and up to 36 months for obligations in U.S. public finance markets. The following summarizes the rating categories used by Fitch for short-term obligations:

“F1” – Securities possess the highest short-term credit quality. This designation indicates the strongest intrinsic capacity for timely payment of financial commitments; may have an added “+” to denote any exceptionally strong credit feature.

“F2” – Securities possess good short-term credit quality. This designation indicates good intrinsic capacity for timely payment of financial commitments.

“F3” – Securities possess fair short-term credit quality. This designation indicates that the intrinsic capacity for timely payment of financial commitments is adequate.

“B” – Securities possess speculative short-term credit quality. This designation indicates minimal capacity for timely payment of financial commitments, plus heightened vulnerability to near term adverse changes in financial and economic conditions.

“C” – Securities possess high short-term default risk. Default is a real possibility.

“RD” – Restricted default. Indicates an entity that has defaulted on one or more of its financial commitments, although it continues to meet other financial obligations. Typically applicable to entity ratings only.

“D” – Default. Indicates a broad-based default event for an entity, or the default of a short-term obligation.

The **DBRS® Ratings Limited (“DBRS”)** short-term debt rating scale provides an opinion on the risk that an issuer will not meet its short-term financial obligations in a timely manner. Ratings are based on quantitative and qualitative considerations relevant to the issuer and the relative ranking of claims. The R-1 and R-2 rating categories are further denoted by the sub-categories “(high)”, “(middle)”, and “(low)”.

The following summarizes the ratings used by DBRS for commercial paper and short-term debt:

“R-1 (high)” - Short-term debt rated “R-1 (high)” is of the highest credit quality. The capacity for the payment of short-term financial obligations as they fall due is exceptionally high. Unlikely to be adversely affected by future events.

“R-1 (middle)” – Short-term debt rated “R-1 (middle)” is of superior credit quality. The capacity for the payment of short-term financial obligations as they fall due is very high. Differs from “R-1 (high)” by a relatively modest degree. Unlikely to be significantly vulnerable to future events.

“R-1 (low)” – Short-term debt rated “R-1 (low)” is of good credit quality. The capacity for the payment of short-term financial obligations as they fall due is substantial. Overall strength is not as favorable as higher rating categories. May be vulnerable to future events, but qualifying negative factors are considered manageable.

“R-2 (high)” – Short-term debt rated “R-2 (high)” is considered to be at the upper end of adequate credit quality. The capacity for the payment of short-term financial obligations as they fall due is acceptable. May be vulnerable to future events.

“R-2 (middle)” – Short-term debt rated “R-2 (middle)” is considered to be of adequate credit quality. The capacity for the payment of short-term financial obligations as they fall due is acceptable. May be vulnerable to future events or may be exposed to other factors that could reduce credit quality.

“R-2 (low)” – Short-term debt rated “R-2 (low)” is considered to be at the lower end of adequate credit quality. The capacity for the payment of short-term financial obligations as they fall due is acceptable. May be vulnerable to future events. A number of challenges are present that could affect the issuer’s ability to meet such obligations.

“R-3” – Short-term debt rated “R-3” is considered to be at the lowest end of adequate credit quality. There is a capacity for the payment of short-term financial obligations as they fall due. May be vulnerable to future events and the certainty of meeting such obligations could be impacted by a variety of developments.

“R-4” – Short-term debt rated “R-4” is considered to be of speculative credit quality. The capacity for the payment of short-term financial obligations as they fall due is uncertain.

“R-5” – Short-term debt rated “R-5” is considered to be of highly speculative credit quality. There is a high level of uncertainty as to the capacity to meet short-term financial obligations as they fall due.

“D” – Short-term debt rated “D” is assigned when the issuer has filed under any applicable bankruptcy, insolvency or winding up statute or there is a failure to satisfy an obligation after the exhaustion of grace periods, a downgrade to “D” may occur. DBRS may also use “SD” (Selective Default) in cases where only some securities are impacted, such as the case of a “distressed exchange”.

Long-Term Credit Ratings

The following summarizes the ratings used by *Standard & Poor’s* for long-term issues:

“AAA” – An obligation rated “AAA” has the highest rating assigned by Standard & Poor’s. The obligor’s capacity to meet its financial commitment on the obligation is extremely strong.

“AA” – An obligation rated “AA” differs from the highest-rated obligations only to a small degree. The obligor’s capacity to meet its financial commitment on the obligation is very strong.

“A” – An obligation rated “A” is somewhat more susceptible to the adverse effects of changes in circumstances and economic conditions than obligations in higher-rated categories. However, the obligor’s capacity to meet its financial commitment on the obligation is still strong.

“BBB” – An obligation rated “BBB” exhibits adequate protection parameters. However, adverse economic conditions or changing circumstances are more likely to lead to a weakened capacity of the obligor to meet its financial commitment on the obligation.

“BB,” “B,” “CCC,” “CC” and “C” – Obligations rated “BB,” “B,” “CCC,” “CC” and “C” are regarded as having significant speculative characteristics. “BB” indicates the least degree of speculation and “C” the highest. While such obligations will likely have some quality and protective characteristics, these may be outweighed by large uncertainties or major exposures to adverse conditions.

“BB” – An obligation rated “BB” is less vulnerable to nonpayment than other speculative issues. However, it faces major ongoing uncertainties or exposure to adverse business, financial, or economic conditions which could lead to the obligor’s inadequate capacity to meet its financial commitment on the obligation.

“B” – An obligation rated “B” is more vulnerable to nonpayment than obligations rated “BB”, but the obligor currently has the capacity to meet its financial commitment on the obligation. Adverse business, financial, or economic conditions will likely impair the obligor’s capacity or willingness to meet its financial commitment on the obligation.

“CCC” – An obligation rated “CCC” is currently vulnerable to nonpayment, and is dependent upon favorable business, financial and economic conditions for the obligor to meet its financial commitment on the obligation. In the event of adverse business, financial, or economic conditions, the obligor is not likely to have the capacity to meet its financial commitment on the obligation.

“CC” – An obligation rated “CC” is currently highly vulnerable to nonpayment. The “CC” rating is used when a default has not yet occurred, but Standard & Poor’s expects default to be a virtual certainty, regardless of the anticipated time to default.

“C” – An obligation rated “C” is currently highly vulnerable to nonpayment, and the obligation is expected to have lower relative seniority or lower ultimate recovery compared to obligations that are rated higher.

“D” – An obligation rated “D” is in default or in breach of an imputed promise. For non-hybrid capital instruments, the “D” rating category is used when payments on an obligation are not made on the date due, unless Standard & Poor’s believes that such payments will be made within five business days in the absence of a stated grace period or within the earlier of the stated grace period or 30 calendar days. The “D” rating also will be used upon the filing of a bankruptcy petition or the taking of similar action and where default on an obligation is a virtual certainty, for example due to automatic stay provisions. An obligation’s rating is lowered to “D” if it is subject to a distressed exchange offer.

Plus (+) or minus (-) – The ratings from “AA” to “CCC” may be modified by the addition of a plus (+) or minus (-) sign to show relative standing within the major rating categories.

“NR” – This indicates that no rating has been requested, or that there is insufficient information on which to base a rating, or that Standard & Poor’s does not rate a particular obligation as a matter of policy.

Local Currency and Foreign Currency Risks - Standard & Poor’s issuer credit ratings make a distinction between foreign currency ratings and local currency ratings. An issuer’s foreign currency rating will differ from its local currency rating when the obligor has a different capacity to meet its obligations denominated in its local currency, vs. obligations denominated in a foreign currency.

Moody’s long-term ratings are forward-looking opinions of the relative credit risks of financial obligations with an original maturity of one year or more. Such ratings reflect both the likelihood of default on contractually promised payments and the expected financial loss suffered in the event of default. The following summarizes the ratings used by Moody’s for long-term debt:

“Aaa” – Obligations rated “Aaa” are judged to be of the highest quality, subject to the lowest level of credit risk.

“Aa” – Obligations rated “Aa” are judged to be of high quality and are subject to very low credit risk.

“A” – Obligations rated “A” are judged to be upper-medium grade and are subject to low credit risk.

“Baa” – Obligations rated “Baa” are judged to be medium-grade and subject to moderate credit risk and as such may possess certain speculative characteristics.

“Ba” – Obligations rated “Ba” are judged to be speculative and are subject to substantial credit risk.

“B” – Obligations rated “B” are considered speculative and are subject to high credit risk.

“Caa” – Obligations rated “Caa” are judged to be speculative of poor standing and are subject to very high credit risk.

“Ca” – Obligations rated “Ca” are highly speculative and are likely in, or very near, default, with some prospect of recovery of principal and interest.

“C” – Obligations rated “C” are the lowest rated and are typically in default, with little prospect for recovery of principal or interest.

Note: Moody’s appends numerical modifiers 1, 2, and 3 to each generic rating classification from “Aa” through “Caa.” The modifier 1 indicates that the obligation ranks in the higher end of its generic rating category; the modifier 2 indicates a mid-range ranking; and the modifier 3 indicates a ranking in the lower end of that generic rating category.

The following summarizes long-term ratings used by *Fitch*:

“AAA” – Securities considered to be of the highest credit quality. “AAA” ratings denote the lowest expectation of credit risk. They are assigned only in cases of exceptionally strong capacity for payment of financial commitments. This capacity is highly unlikely to be adversely affected by foreseeable events.

“AA” – Securities considered to be of very high credit quality. “AA” ratings denote expectations of very low credit risk. They indicate very strong capacity for payment of financial commitments. This capacity is not significantly vulnerable to foreseeable events.

“A” – Securities considered to be of high credit quality. “A” ratings denote expectations of low credit risk. The capacity for payment of financial commitments is considered strong. This capacity may, nevertheless, be more vulnerable to adverse business or economic conditions than is the case for higher ratings.

“BBB” – Securities considered to be of good credit quality. “BBB” ratings indicate that expectations of credit risk are currently low. The capacity for payment of financial commitments is considered adequate but adverse business or economic conditions are more likely to impair this capacity.

“BB” – Securities considered to be speculative. “BB” ratings indicate that there is an elevated vulnerability to credit risk, particularly in the event of adverse changes in business or economic conditions over time; however, business or financial alternatives may be available to allow financial commitments to be met.

“B” – Securities considered to be highly speculative. “B” ratings indicate that material credit risk is present.

“CCC” – A “CCC” rating indicates that substantial credit risk is present.

“CC” – A “CC” rating indicates very high levels of credit risk.

“C” – A “C” rating indicates exceptionally high levels of credit risk.

Defaulted obligations typically are not assigned “RD” or “D” ratings, but are instead rated in the “B” to “C” rating categories, depending upon their recovery prospects and other relevant characteristics. Fitch believes that this approach better aligns obligations that have comparable overall expected loss but varying vulnerability to default and loss.

Plus (+) or minus (-) may be appended to a rating to denote relative status within major rating categories. Such suffixes are not added to the “AAA” obligation rating category, or to corporate finance obligation ratings in the categories below “CCC”.

The *DBRS* long-term rating scale provides an opinion on the risk of default. That is, the risk that an issuer will fail to satisfy its financial obligations in accordance with the terms under which an obligation has been issued. Ratings are based on quantitative and qualitative considerations relevant to the issuer, and the relative ranking of claims. All rating categories other than AAA and D also contain subcategories “(high)” and “(low)”. The absence of either a “(high)” or “(low)” designation indicates the rating is in the middle of the category. The following summarizes the ratings used by DBRS for long-term debt:

“AAA” - Long-term debt rated “AAA” is of the highest credit quality. The capacity for the payment of financial obligations is exceptionally high and unlikely to be adversely affected by future events.

“AA” – Long-term debt rated “AA” is of superior credit quality. The capacity for the payment of financial obligations is considered high. Credit quality differs from “AAA” only to a small degree. Unlikely to be significantly vulnerable to future events.

“A” – Long-term debt rated “A” is of good credit quality. The capacity for the payment of financial obligations is substantial, but of lesser credit quality than “AA.” May be vulnerable to future events, but qualifying negative factors are considered manageable.

“BBB” – Long-term debt rated “BBB” is of adequate credit quality. The capacity for the payment of financial obligations is considered acceptable. May be vulnerable to future events.

“BB” – Long-term debt rated “BB” is of speculative, non-investment grade credit quality. The capacity for the payment of financial obligations is uncertain. Vulnerable to future events.

“B” – Long-term debt rated “B” is of highly speculative credit quality. There is a high level of uncertainty as to the capacity to meet financial obligations.

“CCC”, “CC” and “C” – Long-term debt rated in any of these categories is of very highly speculative credit quality. In danger of defaulting on financial obligations. There is little difference between these three categories, although “CC” and “C” ratings are normally applied to obligations that are seen as highly likely to default, or subordinated to obligations rated in the “CCC” to “B” range. Obligations in respect of which default has not technically taken place but is considered inevitable may be rated in the “C” category.

“D” – A security rated “D” is assigned when the issuer has filed under any applicable bankruptcy, insolvency or winding up statute or there is a failure to satisfy an obligation after the exhaustion of grace periods, a downgrade to “D” may occur. DBRS may also use “SD” (Selective Default) in cases where only some securities are impacted, such as the case of a “distressed exchange”.

Municipal Note Ratings

A *Standard & Poor's* U.S. municipal note rating reflects Standard & Poor's opinion about the liquidity factors and market access risks unique to the notes. Notes due in three years or less will likely receive a note rating. Notes with an original maturity of more than three years will most likely receive a long-term debt rating. In determining which type of rating, if any, to assign, Standard & Poor's analysis will review the following considerations:

- Amortization schedule - the larger the final maturity relative to other maturities, the more likely it will be treated as a note; and
- Source of payment - the more dependent the issue is on the market for its refinancing, the more likely it will be treated as a note.

Municipal Short-Term Note rating symbols are as follows:

“SP-1” – A municipal note rated “SP-1” exhibits a strong capacity to pay principal and interest. An issue determined to possess a very strong capacity to pay debt service is given a plus (+) designation.

“SP-2” – A municipal note rated “SP-2” exhibits a satisfactory capacity to pay principal and interest, with some vulnerability to adverse financial and economic changes over the term of the notes.

“SP-3” – A municipal note rated “SP-3” exhibits a speculative capacity to pay principal and interest.

Moody's uses the Municipal Investment Grade ("MIG") scale to rate U.S. municipal bond anticipation notes of up to three years maturity. Municipal notes rated on the MIG scale may be secured by either pledged revenues or proceeds of a take-out financing received prior to note maturity. MIG ratings expire at the maturity of the obligation, and the issuer's long-term rating is only one consideration in assigning the MIG rating. MIG ratings are divided into three levels – "MIG-1" through "MIG-3" while speculative grade short-term obligations are designated "SG". The following summarizes the ratings used by Moody's for short-term municipal obligations:

"MIG-1" – This designation denotes superior credit quality. Excellent protection is afforded by established cash flows, highly reliable liquidity support, or demonstrated broad-based access to the market for refinancing.

"MIG-2" – This designation denotes strong credit quality. Margins of protection are ample, although not as large as in the preceding group.

"MIG-3" – This designation denotes acceptable credit quality. Liquidity and cash-flow protection may be narrow, and market access for refinancing is likely to be less well-established.

"SG" – This designation denotes speculative-grade credit quality. Debt instruments in this category may lack sufficient margins of protection.

"NR" – Is assigned to an unrated obligation.

In the case of variable rate demand obligations ("VRDOs"), a two-component rating is assigned: a long or short-term debt rating and a demand obligation rating. The first element represents Moody's evaluation of risk associated with scheduled principal and interest payments. The second element represents Moody's evaluation of risk associated with the ability to receive purchase price upon demand ("demand feature"). The second element uses a rating from a variation of the MIG rating scale called the Variable Municipal Investment Grade or "VMIG" scale. The rating transitions on the VMIG scale differ from those on the Prime scale to reflect the risk that external liquidity support generally will terminate if the issuer's long-term rating drops below investment grade.

VMIG rating expirations are a function of each issue's specific structural or credit features.

"VMIG-1" – This designation denotes superior credit quality. Excellent protection is afforded by the superior short-term credit strength of the liquidity provider and structural and legal protections that ensure the timely payment of purchase price upon demand.

"VMIG-2" – This designation denotes strong credit quality. Good protection is afforded by the strong short-term credit strength of the liquidity provider and structural and legal protections that ensure the timely payment of purchase price upon demand.

"VMIG-3" – This designation denotes acceptable credit quality. Adequate protection is afforded by the satisfactory short-term credit strength of the liquidity provider and structural and legal protections that ensure the timely payment of purchase price upon demand.

"SG" – This designation denotes speculative-grade credit quality. Demand features rated in this category may be supported by a liquidity provider that does not have an investment grade short-term rating or may lack the structural and/or legal protections necessary to ensure the timely payment of purchase price upon demand.

"NR" – Is assigned to an unrated obligation.

About Credit Ratings

A **Standard & Poor's** issue credit rating is a forward-looking opinion about the creditworthiness of an obligor with respect to a specific financial obligation, a specific class of financial obligations, or a specific financial program (including ratings on medium-term note programs and commercial paper programs). It takes into consideration the creditworthiness of guarantors, insurers, or other forms of credit enhancement on the obligation and takes into account the

currency in which the obligation is denominated. The opinion reflects Standard & Poor's view of the obligor's capacity and willingness to meet its financial commitments as they come due, and may assess terms, such as collateral security and subordination, which could affect ultimate payment in the event of default.

Moody's credit ratings must be construed solely as statements of opinion and not statements of fact or recommendations to purchase, sell or hold any securities.

Fitch's credit ratings provide an opinion on the relative ability of an entity to meet financial commitments, such as interest, preferred dividends, repayment of principal, insurance claims or counterparty obligations. Fitch credit ratings are used by investors as indications of the likelihood of receiving the money owed to them in accordance with the terms on which they invested. Fitch's credit ratings cover the global spectrum of corporate, sovereign (including supranational and sub-national), financial, bank, insurance, municipal and other public finance entities and the securities or other obligations they issue, as well as structured finance securities backed by receivables or other financial assets.

DBRS credit ratings are opinions based on the quantitative and qualitative analysis of information sourced and received by DBRS, which information is not audited or verified by DBRS. Ratings are not buy, hold or sell recommendations and they do not address the market price of a security. Ratings may be upgraded, downgraded, placed under review, confirmed and discontinued.

Appendix B Proxy Voting Policy

Miller Value Partners, LLC

PROXY VOTING

Miller Value Partners, LLC (the “Adviser”) will exercise its proxy voting responsibilities to serve the best interests of its clients and in compliance with applicable laws and regulations. The Adviser recognizes that proxy voting is a valuable right of company shareholders and believes that shareholders are best served by a voting process guided by the principles of preserving and expanding the power of shareholders in areas of corporate governance and allowing responsible management teams to run businesses.

Procedures

Oversight of Principles and Procedures

The Adviser’s Managing Member has full authority to determine the Adviser’s proxy voting principles and procedures and vote proxies on behalf of the Adviser’s clients. The Managing Member may delegate oversight and implementation of the proxy voting process, including the principles and procedures that govern it, to one or more portfolio managers.

Limitations

The Adviser recognizes proxy voting as a valuable right of company shareholders. Generally speaking, the Adviser will vote all proxies it receives. However, the Adviser may refrain from voting in certain circumstances. For instance, the Adviser generally intends to refrain from voting a proxy if the company’s shares are no longer held by the Adviser’s clients at the time of the meeting. Additionally, the Adviser may refrain from voting a proxy if the Adviser concludes the potential impact on shareholders’ interests is insignificant while the cost associated with analyzing and voting the proxy may be significant.

Client Accounts for which the Adviser Votes Proxies

The Adviser shall vote proxies for each client account for which the client:

- (i) has specifically authorized the Adviser to vote proxies;
- (ii) without specifically authorizing the Adviser to vote proxies, has granted general investment discretion to the Adviser in the investment management agreement; or
- (i) is subject to ERISA, unless the investment management agreement or another applicable writing specifically reserves the responsibility for voting proxies to the plan trustees or other named fiduciary.

At or prior to account inception, the Adviser shall determine whether it has proxy voting authority over such client account.

The Adviser will deliver to each client for which it has proxy voting authority, no later than the time it accepts such authority, a written summary of the Proxy Voting Principles and Procedures. The summary will state that a copy of the Adviser’s Proxy Voting Principles and Procedures is available upon request, as well as guidelines that describe how the Adviser generally votes proxies.

The Adviser will maintain a record of each client request for proxy voting information. The Adviser will also maintain a copy of its response thereto.

Proxy Administration

The Adviser will instruct each client custodian to forward proxy materials to the vendor engaged by the Adviser to electronically receive ballots and transmit the Adviser’s proxy votes, as well as to maintain proxy voting receipts and

records (the "Proxy Administration Vendor"). New client custodians will be notified at account inception of their responsibility to deliver proxy materials to the Adviser's Proxy Administration Vendor.

Compliance Review

A member of the compliance team will review the pending proxies and identify any potential conflicts between the Adviser, or its employees, and the Adviser's clients.

Identifying Conflicts

In identifying conflicts of interest, the compliance team will review the following issues:

(i) Whether there are any business or personal relationships between the Adviser, or an employee of the Adviser, and the officers, directors or shareholder proposal proponents of a company whose securities are held in client accounts that may create an incentive to vote in a manner that is not consistent with the best interests of the Adviser's clients; and

(ii) Whether the Adviser has any other economic incentive to vote in a manner that is not consistent with the best interests of its clients.

Assessing Materiality

If it is determined that a conflict exists, the conflict will be deemed to be material if a member of the compliance team determines, in the exercise of reasonable judgment, that the conflict is likely to have an impact on the manner in which the subject shares are voted.

If it is determined that the conflict is not material, the proxy issue will be forwarded to the portfolio manager for voting.

If a member of the compliance team determines that the conflict may be material, the following steps will be taken:

(i) The compliance team will consult with representatives of the Adviser's senior management to make a final determination of materiality. The compliance team will maintain a record of this determination.

(ii) After the determination is made, the following procedures will apply:

(a) If the final determination is that the conflict is not material, the proxy issue will be forwarded to the portfolio manager for voting;

(b) If the final determination is that the conflict is material, the following procedures will apply:

(1) If the Adviser's Proxy Voting Guidelines ("Guidelines"), a copy of which is attached as Schedule 1, definitively address the issues presented for vote, the Adviser will vote according to the Guidelines;

(2) If the issues presented for vote are not definitively addressed in the Guidelines, the Adviser will either (x) follow the vote recommendation of an independent voting delegate or (y) disclose the conflict to clients and obtain their consent to vote.

Notification to Clients

Upon receipt of a client request for information on how proxies were voted for that client's account, the Adviser will promptly provide such requested information to the client in writing.

Proxy Administration

The Adviser's operations team, with the assistance of the Proxy Administration Vendor will provide custodians with instructions to forward proxies to the Adviser's Proxy Administration Vendor for all clients for whom the Adviser is

responsible for voting proxies. The Adviser's investment team or its designee, per instructions from the applicable portfolio manager, will vote proxy issues via the Proxy Administration Vendor's software, online or via facsimile.

Recordkeeping

The Adviser shall maintain the following records relating to proxy voting:

- (i) a copy of this Policy and Procedures, including any and all amendments that may be adopted;
- (ii) a copy of each proxy statement that the Adviser receives regarding client securities;
- (iii) a record of each vote cast by the Adviser on behalf of a client;
- (iv) documentation relating to the identification and resolution of conflicts of interest;
- (v) any documents created by the Adviser that were material to a proxy voting decision or that memorialized the basis for that decision; and,
- (vi) a copy of each written client request for information on how the Adviser voted proxies on behalf of the client, and a copy of any written response by the Adviser to any (written or oral) client request for information on how the Adviser voted proxies on behalf of the requesting client.

All required records shall be maintained for a period of five years from the end of the fiscal year during which the last entry was made on such record. For the first two (2) years of the five (5) year period, the required records will be maintained in the Adviser's Offices. In lieu of keeping copies of proxy statements, the Adviser may rely on proxy statements filed on the EDGAR filing system as well as on third party records of proxy statements if the third party provides an undertaking to provide copies of such proxy statements promptly upon request. The Adviser may also rely on a third party to make and retain, on the Adviser's behalf, records of votes cast by the Adviser on behalf of clients if the third party provides an undertaking to provide a copy of such records promptly upon request.

In addition, the Adviser shall maintain the following records on behalf of each investment company client for a period of six years from the end of the fiscal year during which the last entry was made on such record:

A proxy log and supporting materials, including:

- (i) Issuer name;
- (ii) Exchange ticker symbol of the issuer's shares to be voted;
- (iii) Council on Uniform Securities Identification Procedures (CUSIP) number for the shares to be voted;
- (iv) A brief identification on the matter voted;
- (v) Whether the matter was proposed by the issuer or by a shareholder of the issuer;
- (vi) Whether a vote was cast on the matter;
- (vii) A record of how the vote was cast; and,
- (viii) Whether the vote was cast for or against the recommendation of the issuer's management team.

The Adviser may also rely on a third party to make and retain, on the Adviser's behalf, these records if the third party provides an undertaking to provide a copy of such records promptly upon request.

SCHEDULE 1

PROXY VOTING GUIDELINES

The Adviser maintains these proxy-voting guidelines, which set forth the manner in which the Adviser generally votes on issues that are routinely presented. Please note that for each proxy vote the Adviser takes into consideration its duty to its clients, the specific circumstances of the vote and all other relevant facts available at the time of the vote. While these guidelines provide the framework for voting proxies, ultimately proxy votes are cast on a case-by-case basis. Therefore actual votes for any particular proxy issue may differ from the guidelines shown below.

Four principal areas of interest to shareholders:

1. Obligations of the Board of Directors
2. Compensations of management and the Board of Directors
3. Take-over protections
4. Shareholders' rights

Proxy Issue	Adviser Guideline
