**Supplement to the Miller Income Fund
Prospectus, Statement of Additional Information and Summary Prospectus
each dated January 31, 2018, as supplemented**

Miller Income Fund	
Class A	LMCJX
Class C	LCMNX
Class FI	LMCKX
Class I	LMCLX
Class IS	LMCMX

**Supplement to the Miller Opportunity Trust
Prospectus, Statement of Additional Information and Summary Prospectus
each dated April 30, 2018, as supplemented**

Miller Opportunity Trust	
Class A	LGOAX
Class C	LMOPX
Class FI	LMOFX
Class R	LMORX
Class I	LMNOX
Class IS	MVISX

This supplement is being provided to inform you that effective November 30, 2018, Appendix A to each Fund's Prospectus - Financial Intermediary Sales Charge Variations is supplemented to add the language as shown below. All references in each Fund's Prospectus, Statement of Additional Information, and Summary Prospectus to such Appendix A shall refer to the Appendix A as hereby amended.

Intermediary-Defined Sales Charge Waiver Policies

The availability of certain initial or deferred sales charge waivers and discounts may depend on the particular financial intermediary or type of account through which you purchase or hold Fund shares.

Intermediaries may have different policies and procedures regarding the availability of front-end sales load waivers or contingent deferred (back-end) sales load ("CDSC") waivers, which are discussed below. In all instances, it is the purchaser's responsibility to notify the fund or the purchaser's financial intermediary at the time of purchase of any relationship or other facts qualifying the purchaser for sales charge waivers or discounts. For waivers and discounts not available through a particular intermediary, shareholders will have to purchase fund shares directly from the fund or through another intermediary to receive these waivers or discounts.

Raymond James & Associates, Inc., Raymond James Financial Services & Raymond James affiliates ("Raymond James")

Effective March 1, 2019, shareholders purchasing fund shares through a Raymond James platform or account will be eligible only for the following load waivers (front-end sales charge waivers and contingent deferred, or back-end, sales charge waivers) and discounts, which may differ from those disclosed elsewhere in this Fund's prospectus or SAI.

Front-end sales load waivers on Class A shares available at Raymond James

- Shares purchased in an investment advisory program.
- Shares purchased through reinvestment of capital gains distributions and dividend reinvestment when purchasing shares of the same fund (but not any other fund within the fund family).
- Employees and registered representatives of Raymond James or its affiliates and their family members as designated by Raymond James.
- Shares purchased from the proceeds of redemptions within the same fund family, provided (1) the repurchase occurs within 90 days following the redemption, (2) the redemption and purchase occur in the same account, and (3) redeemed shares were subject to a front-end or deferred sales load (known as Rights of Reinstatement).
- A shareholder in the Fund's Class C shares will have their shares converted at net asset value to Class A shares (or the appropriate share class) of the Fund if the shares are no longer subject to a CDSC and the conversion is in line with the policies and procedures of Raymond James.

CDSC Waivers on Classes A, B and C shares available at Raymond James

- Death or disability of the shareholder.
- Shares sold as part of a systematic withdrawal plan as described in the fund's prospectus.
- Return of excess contributions from an IRA Account.
- Shares sold as part of a required minimum distribution for IRA and retirement accounts due to the shareholder reaching age 70½ as described in the fund's prospectus.
- Shares sold to pay Raymond James fees but only if the transaction is initiated by Raymond James.
- Shares acquired through a right of reinstatement.

Front-end load discounts available at Raymond James: breakpoints, and/or rights of accumulation

- Breakpoints as described in this prospectus.
- Rights of accumulation which entitle shareholders to breakpoint discounts will be automatically calculated based on the aggregated holding of fund family assets held by accounts within the purchaser's household at Raymond James. Eligible fund family assets not held at Raymond James may be included in the rights of accumulation calculation only if the shareholder notifies his or her financial advisor about such assets.

In addition, effective February 1, 2019, the following Prospectus sections are amended:

Waivers of initial sales charges for certain Class A investors on Page 46 of the Miller Income Fund and **Waivers for certain Class A investors** on Page 31 of the Miller Opportunity Trust are amended to add the following language:

- Investors who are converted from Class I shares by their program provider

Shareholder Information, Converting Shares section as previously added by supplement on June 7, 2018 to the Miller Income Fund and Page 39 of the Miller Opportunity Trust is amended to add the following language:

Investors who hold Class I shares of the Fund through a fee-based program, but who subsequently become ineligible to participate in the program or withdraw from the program, may be subject to conversion of their Class I shares by their program provider to another class of shares of the Fund having expenses (including Rule 12b-1 fees) that may be higher than the expenses of the Class I shares. Investors should contact their program provider to obtain information about their eligibility for the provider's program and the class of shares they would receive upon such a conversion.

Furthermore, the Miller Income Fund Prospectus "Performance of Related Account" section, second sentence, is revised effective the date of this supplement to reflect the correct market value as listed below:

The Other Account was a fully discretionary, fee-paying and actively managed account with a market value of approximately \$42.9 million as of December 31, 2013.

Please retain this supplement for future reference.

June 7, 2018

**Supplement to the Miller Income Fund
Prospectus, Statement of Additional Information and Summary Prospectus
each dated January 31, 2018**

Miller Income Fund	
Class A	LMCJX
Class C	LCMNX
Class FI	LMCKX
Class I	LMCLX
Class IS	LMCMX

This supplement is being provided to inform you that effective July 1, 2018, Appendix A to the Fund's Prospectus - Financial Intermediary Sales Charge Variations is supplemented to add the language as shown below. All references in the Prospectus, Statement of Additional Information, and Summary Prospectus to such Appendix A shall refer to the Appendix A as hereby amended.

Morgan Stanley Wealth Management ("Morgan Stanley")

Effective July 1, 2018, shareholders purchasing Fund shares through a Morgan Stanley Wealth Management transactional brokerage account will be eligible only for the following front-end sales charge waivers with respect to Class A shares, which may differ from and may be more limited than those disclosed elsewhere in this Fund's Prospectus or SAI.

Front-end Sales Charge Waivers on Class A Shares available at Morgan Stanley Wealth Management

- Employer-sponsored retirement plans (e.g., 401(k) plans, 457 plans, employer-sponsored 403(b) plans, profit sharing and money purchase pension plans and defined benefit plans). For purposes of this provision, employer-sponsored retirement plans do not include SEP IRAs, Simple IRAs, SAR-SEPs or Keogh plans
- Shares purchased through a Morgan Stanley self-directed brokerage account
- Shares purchased through reinvestment of dividends and capital gains distributions when purchasing shares of the same fund
- Morgan Stanley employee and employee-related accounts according to Morgan Stanley's account linking rules
- Shares purchased from the proceeds of redemptions within the same fund family, provided (i) the repurchase occurs within 90 days following the redemption, (ii) the redemption and purchase occur in the same account, and (iii) redeemed shares were subject to a front-end or deferred sales charge.
- Class C (i.e., level-load) shares that are no longer subject to a contingent deferred sales charge and are converted to Class A shares of the same fund pursuant to Morgan Stanley Wealth Management's share class conversion program

In addition, the following sections in the Prospectus are revised as shown below:

Footnote 1 to the Class A shares, sales charge breakpoint table on Page 35 is replaced with the following:

¹ A Financial Intermediary may be paid a commission on Fund purchases of \$1 million or more of up to 1.00%. Starting in the thirteenth month after purchase, these purchases will incur the annual distribution and service fee of up to 0.25%, which will be paid to the Financial Intermediary. Prior to the thirteenth month, this fee will be retained on behalf of the Fund. The Financial Intermediary will start receiving the annual 12b-1 distribution and service fee immediately if no commission is paid at purchase. Please contact your Financial Intermediary for more information.

The following section “Converting Shares” is added to the Shareholder Information section. Shareholders who qualify as stated below now also have the ability to convert shares.

Converting Shares

Generally	Investors currently owning Class A, Class C, or Class FI shares who qualify as Clients of Eligible Financial Intermediaries and participate in Eligible Investment Programs made available through their financial intermediaries (such as investors in fee-based advisory or mutual fund “wrap” programs or invested through no-load networks or platforms), may convert to Class I shares under certain limited circumstances. Investors currently owning Class C shares who qualify as above, may convert to Class A shares under certain limited circumstances. Please refer to the section of this Prospectus titled “Retirement Plans, Clients of Eligible Financial Intermediaries and Institutional Investors” or contact your financial intermediary for more information.

Miller Income Fund

Class (Ticker Symbol):
**A (LMCJX), C (LCMNX), FI (LMCKX), I (LMCLX),
 IS (LMCMX)**

Summary Prospectus
January 31, 2018
www.millervaluefunds.com

Before you invest, you may want to review the Miller Income Fund's (the "Fund") statutory prospectus and statement of additional information, which contain more information about the Fund and its risks. The current statutory prospectus and statement of additional information dated January 31, 2018, are incorporated by reference into this Summary Prospectus. You can find the Fund's statutory prospectus, statement of additional information and other information about the Fund online at www.millervaluefunds.com. You can also get this information at no cost by calling 1-888-593-5110 or by sending an e-mail request to inquiries@millervaluefunds.com

Investment objective

The Fund seeks to provide a high level of income while maintaining the potential for growth.

Fees and expenses of the Fund

The accompanying table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

You may qualify for sales charge discounts if you and your family invest, or agree to invest in the future, at least \$25,000 in the Miller Value Funds, LLC family of funds ("Miller Value Funds"). More information about these and other discounts is available from your financial intermediary, in the statutory prospectus on page 31 under the heading "Choosing a class of shares to buy," in Appendix A to the statutory prospectus – Financial Intermediary Sales Charge Variations, and in the Fund's statement of additional information ("SAI") on page 51 under the heading "Sales Charge Waivers and Reductions."

Shareholder Fees

(fees paid directly from your investment)

	Class A	Class C	Class FI	Class I	Class IS
Maximum sales charge (load) imposed on purchases (as a % of offering price)	5.75%	None	None	None	None
Maximum deferred sales charge (load) (as a % of the lower of net asset value at purchase or redemption) (may be reduced over time)	None ¹	1.00%	None	None	None

Annual Fund Operating Expenses

(expenses that you pay each year as a percentage of the value of your investment)

	Class A	Class C	Class FI	Class I	Class IS
Management fees ²	0.70%	0.70%	0.70%	0.70%	0.70%
Distribution and Service (Rule 12b-1) fees	0.25%	1.00%	0.25%	None	None
Other expenses	0.37%	0.36%	1.45%	0.38%	0.31%
Acquired fund fees and expenses	0.50%	0.50%	0.50%	0.50%	0.50%
Total annual fund operating expenses	1.82%	2.56%	2.90%	1.58%	1.51%
Fees waived and/or expenses reimbursed ³	-0.07%	-0.06%	-1.15%	-0.13%	-0.16%
Total annual fund operating expenses after waiving fees and/or reimbursing expenses	1.75%	2.50%	1.75%	1.45%	1.35%

1 Although there is no front-end sales charge on purchases of \$1 million or more, there is a maximum deferred sales charge of 1.00% if you redeem within 18 months of such a purchase. This charge is waived for certain investors as defined in the "More about Contingent Deferred Sales Charges" section on page 37 of the statutory prospectus.

2 The Fund pays a management fee at an annual rate that decreases as assets increase, as follows: 0.70% of the first \$2.5 billion of average net assets, 0.675% of the next \$5 billion of average net assets, and 0.65% of average net assets over \$7.5 billion.

- 3 Miller Value Partners, LLC (the “Adviser”) has agreed to waive fees and/or reimburse operating expenses (other than interest expense, brokerage commissions, dividend expense on short sales, taxes, extraordinary expenses, and acquired fund fees and expenses) through February 28, 2019, so that total annual operating expenses will not exceed 1.25% for Class A; 2.00% for Class C; 1.25% for Class FI; 0.95% for Class I and 0.85% for Class IS (the “expense caps”), subject to recapture as described below. In addition, total annual fund operating expenses for Class IS shares will not exceed total annual fund operating expenses for Class I shares, subject to recapture as described below. Total annual fund operating expenses after waiving fees and/or reimbursing expenses exceed the expense cap for each class as a result of acquired fund fees and expenses. These arrangements cannot be terminated prior to February 28, 2019 without the Board of Trustees’ (the “Board”) consent. The Adviser may be permitted to recapture amounts waived and/or reimbursed to a class within three years after the Adviser waived the fee or incurred the expense if the class’ total annual operating expenses have fallen to a level below the limits described above. In no case will the Adviser recapture any amount that would result, on any particular business day of the Fund, in the class’ total annual operating expenses exceeding the lower of: (1) the applicable expense cap at the time of the waiver and/or reimbursement; or (2) the applicable expense cap at the time of the recapture.

Example

This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. The example assumes that you invest \$10,000 in the Fund for the time periods indicated. The example also assumes that your investment has a 5% return each year and the Fund’s operating expenses remain the same (taking into account the expense cap only in the first two years) and you reinvest all distributions and dividends without a sales charge.

Although your actual costs may be higher or lower, based on these assumptions your costs would be:

Number of years you own your shares

	1 year	3 years	5 years	10 years
Class A (with or without redemption at end of period)	\$743	\$1,108	\$1,497	\$2,583
Class C (with redemption at end of period)	\$353	\$790	\$1,355	\$2,890
Class C (without redemption at end of period)	\$253	\$790	\$1,355	\$2,890
Class FI (with or without redemption at end of period)	\$178	\$779	\$1,417	\$3,131
Class I (with or without redemption at end of period)	\$148	\$485	\$847	\$1,866
Class IS (with or without redemption at end of period)	\$137	\$460	\$807	\$1,786

Portfolio turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when shares are held in a taxable account. These costs, which are not reflected in annual fund operating expenses or in the example, affect the Fund’s performance.

The Fund’s portfolio turnover rate for the fiscal year ended September 30, 2017 was 52% of the average value of its portfolio.

Principal investment strategies

The Fund’s investment style is flexible and intended to generate a high level of income from a wide array of sources. The investment strategy involves identifying instances where the Adviser believes the capital markets have mispriced investment opportunities and exploiting price discrepancies and inefficiencies in the market. The Fund’s strategy is not limited by investment style or asset class, and the portfolio managers have the ability to move across asset classes and up and down the capital structure in an effort to access the greatest yield and valuation opportunities. The portfolio managers believe that this flexible approach will allow the Fund to maintain a high level of income while also preserving the opportunity for growth over time.

Under normal market conditions, the Fund will invest without limit primarily in cash distributing equity, and equity-like securities, fixed income securities, derivatives, and other financial instruments of issuers located anywhere in the world. The cash distributing securities in which the Fund may invest include, but are not limited to, common stock, business development companies (“BDCs”), real estate investment trusts (“REITs”), master limited partnerships (“MLPs”), closed-end investment companies, exchange traded funds (“ETFs”), preferred stock, convertible securities, trust preferred securities, investment grade corporate bonds, below investment grade corporate bonds (commonly known as “junk bonds”), royalty trusts, commodity-linked derivatives, asset-backed and mortgage-backed securities, private mortgage-related securities, including non-U.S. mortgage pass-through securities, U.S. Government securities, U.S. Government and agency bonds, sovereign government and agency bonds, municipal securities, bank loans, emerging market debt, equipment trust certificates, money market instruments, zero coupon bonds, indexed securities, including those that are linked to currencies, and inflation-indexed securities, structured notes including those that are linked to currencies, depositary receipts, and floating rate debt instruments. The Fund can invest without limit in foreign securities in any country, including countries with developing or emerging markets.

Derivatives may be used by the Fund primarily for the following: as a hedging technique in an attempt to manage risk; as a substitute for buying or selling securities; to provide additional exposure to investment types or market factors; to change

the characteristics of the Fund's portfolio; and/or in an attempt to enhance income or returns. Derivative instruments the Fund may use include, but are not limited to: covered calls, forwards, including currency forwards, futures, structured notes, swaps, caps, floors, and collars. The Fund's derivative investments may be significant at times.

The Fund is classified as non-diversified, which means it may invest a larger percentage of its assets in a smaller number of issuers than a diversified fund.

Principal risks

Risk is inherent in all investing. The value of your investment in the Fund, as well as the amount of return you receive on your investment, may fluctuate significantly. You may lose part or all of your investment in the Fund or your investment may not perform as well as other similar investments. The Fund's investment strategies and portfolio investments differ from those of many other mutual funds. The Adviser may devote a significant portion of the Fund's assets to pursuing an investment opportunity or strategy, including through the use of derivatives that create a form of investment leverage in the Fund. This approach to investing may make the Fund a more volatile investment than other mutual funds and cause the Fund to perform less favorably than other mutual funds under similar market or economic conditions. The Fund's flexible investment strategy may make it difficult for an investor to evaluate the future risk profile of an investment in the fund because of the portfolio managers' ability to significantly change the composition of the Fund's investments.

An investment in the Fund is not a deposit of a bank and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency. The following is a summary description of certain risks of investing in the Fund.

Market and interest rate risk. The market prices of the Fund's securities may go up or down, sometimes rapidly or unpredictably, due to general market conditions, such as real or perceived adverse economic or political conditions, inflation, changes in interest rates, lack of liquidity in the bond markets or adverse investor sentiment. When market prices fall, the value of your investment will go down. The value of your investment will generally go down when interest rates rise. A rise in rates tends to have a greater impact on the prices of longer term or duration securities. Interest rates have been historically low, so the Fund faces a heightened risk that interest rates may rise. A general rise in interest rates may cause investors to move out of fixed income securities on a large scale, which could adversely affect the price and liquidity of fixed income securities and could also result in increased redemptions from the Fund.

Stock market and equity securities risk. The securities markets are volatile and the market prices of the Fund's securities may decline generally. Securities fluctuate in price based on changes in a company's financial condition and overall market and economic conditions. If the market prices of the securities owned by the Fund fall, the value of your investment in the Fund will decline.

Value investing risk. The value approach to investing involves the risk that stocks may remain undervalued. Value stocks may underperform the overall equity market while the market concentrates on growth stocks. Although the Fund will not concentrate its investments in any one industry or industry group, it may, like many value funds, weight its investments toward certain industries, thus increasing its exposure to factors adversely affecting issuers within those industries.

Issuer risk. An issuer may perform poorly, and therefore, the value of its securities may decline, which would negatively affect the Fund. The value of a security can go up or down more than the market as a whole and can perform differently from the value of the market as a whole, often due to disappointing earnings reports by the issuer, unsuccessful products or services, loss of major customers, major litigation against the issuer or changes in government regulations affecting the issuer or the competitive environment.

Non-diversification risk. The Fund is classified as "non-diversified," which means it may invest a larger percentage of its assets in a smaller number of issuers than a diversified fund. To the extent the Fund invests its assets in a smaller number of issuers, the Fund will be more susceptible to negative events affecting those issuers than a diversified fund.

Portfolio management risk. The value of your investment may decrease if the Adviser's judgment about the attractiveness or value of, or market trends affecting a particular security, industry, sector or region, or about market movements is incorrect, or if there are imperfections, errors or limitations in the tools and data used by the Adviser. In addition, the Fund's investment strategies or policies may change from time to time. Those changes may not lead to the results intended by the Adviser and could have an adverse effect on the value or performance of the Fund.

REIT risk. The value of REITs may be affected by the condition of the economy as a whole and changes in the value of the underlying real estate, the creditworthiness of the issuer of the investments and property taxes, interest rates, liquidity of the credit markets and the real estate regulatory environment. REITs that concentrate their holdings in specific businesses, such as apartments, offices or retail space, will be affected by conditions affecting those businesses.

Liquidity risk. Some assets held by the Fund may be impossible or difficult to sell, particularly during times of market turmoil. These illiquid assets may also be difficult to value. If the Fund is forced to sell an illiquid asset to meet redemption requests or other cash needs, the Fund may be forced to sell at a loss.

Leveraging risk. The value of your investment may be more volatile if the Fund borrows or uses derivatives or other investments that have a leveraging effect on the Fund's portfolio. Other risks also will be compounded. This is because leverage generally magnifies the effect of a change in the value of an asset and creates a risk of loss of value on a larger pool of assets than the Fund would otherwise have had. The Fund may also have to sell assets at inopportune times to satisfy its obligations. The use of leverage is considered to be a speculative investment practice and may result in the loss of a substantial amount, and possibly all, of the Fund's assets.

Credit risk. If an issuer or guarantor of a debt security held by the Fund or a counterparty to a financial contract with the Fund defaults or is downgraded, or is perceived to be less creditworthy, or if the value of the assets underlying a security declines, the value of your investment will typically decline. Subordinated securities are more likely to suffer a credit loss than non-subordinated securities of the same issuer and will be disproportionately affected by a default, downgrade or perceived decline in creditworthiness.

High yield ("junk") bonds risk. High yield bonds are generally subject to greater credit risks than higher-grade bonds. High yield bonds are considered speculative, tend to be less liquid and are more difficult to value than higher grade securities. High yield bonds tend to be volatile and more susceptible to adverse events and negative sentiments and may be difficult to sell at a desired price, or at all, during periods of uncertainty or market turmoil.

Convertible securities risk. Convertible securities are subject to both stock market risk associated with equity securities and the credit and interest rate risks associated with fixed income securities. Credit risk is the risk that the issuer or obligor will not make timely payments of principal and interest. Changes in an issuer's credit rating or the market's perception of an issuer's creditworthiness may also affect the value of the Fund's investment in that issuer. As the market price of the equity security underlying a convertible security falls, the convertible security tends to trade on the basis of its yield and other fixed income characteristics. As the market price of the equity security underlying a convertible security rises, the convertible security tends to trade on the basis of its equity conversion features.

Zero coupon bond risk. Zero coupon securities pay no interest during the life of the obligation but trade at prices below their stated maturity value. Because zero coupon securities pay no interest until maturity, their prices may fluctuate more than other types of securities with the same maturity in the secondary market.

Prepayment or call risk. Many fixed income securities give the issuer the option to repay or call the security prior to its maturity date. Issuers often exercise this right when interest rates fall. Accordingly, if the Fund holds a fixed income security subject to prepayment or call risk, it will not benefit fully from the increase in value that other fixed income securities generally experience when interest rates fall. Upon prepayment of the security, the Fund would also be forced to reinvest the proceeds at then current yields, which would be lower than the yield of the security that was paid off. In addition, if the Fund purchases a fixed income security at a premium (at a price that exceeds its stated par or principal value), the Fund may lose the amount of the premium paid in the event of prepayment.

Extension risk. When interest rates rise, repayments of fixed income securities, particularly asset- and mortgage-backed securities, may occur more slowly than anticipated, extending the effective duration of these fixed income securities at below market interest rates and causing their market prices to decline more than they would have declined due to the rise in interest rates alone. This may cause the Fund's share price to be more volatile.

Mortgage-backed and asset-backed securities risk. When market interest rates increase, the market values of mortgage-backed securities decline. At the same time, however, mortgage refinancings and prepayments slow, which lengthens the effective duration of these securities. As a result, the negative effect of the interest rate increase on the market value of mortgage-backed securities is usually more pronounced than it is for other types of fixed income securities, potentially increasing the volatility of the fund. Conversely, when market interest rates decline, while the value of mortgage-backed securities may increase, the rate of prepayment of the underlying mortgages also tends to increase, which shortens the effective duration of these securities. Mortgage-backed securities are also subject to the risk that underlying borrowers will be unable to meet their obligations and the value of property that secures the mortgage may decline in value and be insufficient, upon foreclosure, to repay the associated loan. Investments in asset-backed securities are subject to similar risks.

Foreign investments and emerging markets risk. The Fund's investments in securities of foreign issuers or issuers with significant exposure to foreign markets involve additional risk. Foreign countries in which the Fund may invest may have markets that are less liquid, less regulated and more volatile than U.S. markets. The value of the Fund's investments may decline because of factors affecting the particular issuer as well as foreign markets and issuers generally, such as

unfavorable or unsuccessful government actions, reduction of government or central bank support and political or financial instability. Lack of information may also affect the value of these securities.

The risks of foreign investments are heightened when investing in issuers in emerging market countries. Emerging market countries tend to have economic, political and legal systems that are less fully developed and are less stable than those of more developed countries. They are often particularly sensitive to market movements because their market prices tend to reflect speculative expectations. Low trading volumes may result in a lack of liquidity and in extreme price volatility.

Currency risk. The value of investments in securities denominated in foreign currencies increases or decreases as the rates of exchange between those currencies and the U.S. dollar change. Currency conversion costs and currency fluctuations could erase investment gains or add to investment losses. Currency exchange rates can be volatile, and are affected by factors such as general economic conditions, the actions of the U.S. and foreign governments or central banks, the imposition of currency controls and speculation.

Sovereign debt risk. Sovereign government and supranational debt involve many of the risks of foreign and emerging markets investments as well as the risk of debt moratorium, repudiation or renegotiation and the Fund may be unable to enforce its rights against the issuers.

Derivatives risk. Using derivatives can increase the Fund's losses and reduce opportunities for gains when market prices, interest rates, currencies, or the derivatives themselves, behave in a way not anticipated by the Fund. Using derivatives also can have a leveraging effect and increase Fund volatility. Certain derivatives have the potential for unlimited loss, regardless of the size of the initial investment. Derivatives may be difficult to sell, unwind or value, and the counterparty may default on its obligations to the Fund. Derivatives are generally subject to the risks applicable to the assets, rates, indices or other indicators underlying the derivative. The value of a derivative may fluctuate more than the underlying assets, rates, indices or other indicators to which it relates. Use of derivatives may have different tax consequences for the Fund than an investment in the underlying security, and those differences may affect the amount, timing and character of income distributed to shareholders. The U.S. government and foreign governments are in the process of adopting and implementing regulations governing derivatives markets, including mandatory clearing of certain derivatives, margin and reporting requirements. The ultimate impact of the regulations remains unclear. Additional regulation of derivatives may make derivatives more costly, limit their availability or utility, otherwise adversely affect their performance or disrupt markets. In addition, the SEC has proposed a new rule that would change the regulation of the use of derivatives by registered investment companies, such as the Fund. If the proposed rule takes effect, it could limit the ability of the Fund to invest in derivatives.

Credit default swap contracts involve heightened risks and may result in losses to the Fund. Credit default swaps may be illiquid and difficult to value, and they increase credit risk since the Fund has exposure to both the issuer whose credit is the subject of the swap and the counterparty to the swap.

Commodities risk. Investing in commodity-linked instruments may subject the Fund to greater volatility than investments in traditional securities. The value of commodity-linked instruments may be affected by changes in overall market movements, commodity index volatility, prolonged or intense speculation by investors, changes in interest rates or factors affecting a particular industry or commodity, such as drought, floods, other weather phenomena, livestock disease, embargoes, tariffs and international economic, political and regulatory developments. The prices of commodities can also fluctuate widely due to supply and demand disruptions in major producing or consuming regions. To the extent the Fund focuses its investments in a particular commodity, the Fund will be more susceptible to risks associated with the particular commodity. No active trading market may exist for certain commodities investments. The Fund's ability to gain exposure to commodities using derivatives, and other means, may be limited by tax considerations.

Segregated assets risk. In connection with certain transactions that may give rise to future payment obligations, including borrowings and many types of derivatives, the Fund may be required to maintain a segregated amount of cash or liquid securities to cover the position. Segregated securities cannot be sold while the position they are covering is outstanding, unless they are replaced with other securities of equal value. As a result, there is the possibility that segregation of a large percentage of the Fund's assets may, in some circumstances, limit the portfolio managers' flexibility.

Short positions risk. Short positions involve leverage and there is no limit on the amount of loss on a security that is sold short. The Fund may suffer significant losses if assets that the Fund sells short appreciate rather than depreciate in value. The amount of any gain will be decreased, and the amount of any loss increased, by the amount of the premium, dividends, interest, or expenses the Fund may be required to pay in connection with the short position.

Valuation risk. The sales price the Fund could receive for any particular portfolio investment may differ from the Fund's valuation of the investment, particularly for securities that trade in thin or volatile markets or that are valued using a fair value methodology. Investors who purchase or redeem Fund shares on days when the Fund is holding fair-valued securities

may receive fewer or more shares or lower or higher redemption proceeds than they would have received if the Fund had not fair-valued the security or had used a different valuation methodology. The Fund's ability to value its investments may be impacted by technological issues and/or errors by pricing services or other third party service providers.

Yield risk. The amount of income received by the Fund will go up or down depending on variations in short-term interest rates, and when interest rates are very low the Fund's expenses could absorb all or a significant portion of the Fund's income. If interest rates increase, the Fund's yield may not increase proportionately. For example, the Fund's Adviser may discontinue any temporary voluntary fee limitation or recoup amounts previously waived and/or reimbursed.

Market sector risk. The Fund may be significantly overweight or underweight certain companies, industries or market sectors, which may cause the Fund's performance to be more sensitive to developments affecting those companies, industries or sectors.

MLP risk. Holders of MLP units have limited control and voting rights on matters affecting the partnership. In addition, there are certain tax risks associated with an investment in MLP units and the potential for conflicts of interest exist between common unit holders and the general partner, including those arising from incentive distribution payments. The benefit the Fund derives from investment in MLP units is largely dependent on the MLPs being treated as partnerships and not as corporations for federal income tax purposes. If an MLP were treated as a corporation for federal income tax purposes, the MLP may incur significant federal and state tax liability, which could cause a reduction in the value of the Fund's shares. MLP entities are typically focused in the energy, natural resources and real estate sectors of the economy. A downturn in the energy, natural resources or real estate sectors of the economy could have an adverse impact on the fund. At times, the performance of securities of companies in the energy, natural resources and real estate sectors of the economy may lag the performance of other sectors or the broader market as a whole. MLPs are generally considered interest-rate sensitive investments, and during periods of interest rate volatility, may not provide attractive returns.

Municipal securities risks. Municipal issuers may be adversely affected by rising health care costs, increasing unfunded pension liabilities, and by the phasing out of federal programs providing financial support. Unfavorable conditions and developments relating to projects financed with municipal securities can result in lower revenues to issuers of municipal securities, potentially resulting in defaults. The value of municipal securities can also be adversely affected by changes in the financial condition of one or more individual municipal issuers or insurers of municipal issuers, regulatory and political developments, tax law changes or other legislative actions, and by uncertainties and public perceptions concerning these and other factors. In recent periods an increasing number of municipal issuers have defaulted on obligations, been downgraded or commenced insolvency proceedings. Financial difficulties of municipal issuers may continue or worsen.

Investment company and ETF risk. Investing in securities issued by investment companies and ETFs involves risks similar to those of investing directly in the securities and other assets held by the investment company or ETF. The Fund will indirectly bear its pro rata share of the fees and expenses incurred by any fund it invests in, including advisory fees, and will pay brokerage commissions in connection with the purchase and sale of shares of ETFs.

BDC risk. BDCs carry risks similar to those of a private equity or venture capital fund. BDCs are not redeemable at the option of the shareholder and they may trade in the market at a discount to their net asset value. BDCs may employ the use of leverage in their portfolios through borrowings or the issuance of preferred stock. While leverage often serves to increase the yield of a BDC, this leverage also subjects a BDC to increased risks, including the likelihood of increased volatility and the possibility that a BDC's common share income will fall if the dividend rate of the preferred shares or the interest rate on any borrowings rises.

Inflation-indexed securities risk. The values of inflation-indexed fixed income securities generally fluctuate in response to changes in real interest rates (approximately nominal interest rates minus the inflation rate). The principal value of inflation-indexed securities declines in periods of deflation, and holders of such securities may experience such a loss. Although the holders of U.S. Treasury Inflation-Protection Securities ("U.S. TIPS") receive no less than the par value of the security at maturity, if the Fund purchases U.S. TIPS in the secondary market whose principal values have been adjusted upward due to inflation since issuance, it may experience a loss if there is a subsequent period of deflation. If inflation is lower than expected during the period the Fund holds an inflation-indexed security, the Fund may earn less on the security than on a conventional bond. Because an increase in principal value of an inflation-indexed security is treated as taxable income to the owner in the year the adjustment is made, even though no cash is paid out, the Fund could be required to sell other securities to make required distributions, including when it is not advantageous to do so. Inflation-indexed securities do not protect against the decline in value of debt securities caused by increases in nominal interest rates.

Privately placed securities risk. Investments in privately placed securities, which are securities issued through private placements, involve additional risks, including that the issuers of such securities are not typically subject to the same disclosure and other regulatory requirements and oversight to which public issuers are subject, there may be very little public information available about the issuers and they may have limited liquidity.

Market events risk. In the past several years financial markets, such as those in the United States, Europe, Asia and elsewhere, have experienced increased volatility, depressed valuations, decreased liquidity and heightened uncertainty. Governmental and non-governmental issuers have defaulted on, or been forced to restructure, their debts. These conditions may continue, recur, worsen or spread.

The U.S. government and the Federal Reserve, as well as certain foreign governments and central banks, have taken steps to support financial markets, including by keeping interest rates at historically low levels. This and other government intervention may not work as intended, particularly if the efforts are perceived by investors as being unlikely to achieve the desired results. The Federal Reserve recently has reduced its market support activities. Further reduction or withdrawal of Federal Reserve or other U.S. or non-U.S. governmental or central bank support, including interest rate increases, could negatively affect financial markets generally, increase market volatility and reduce the value and liquidity of securities in which the Fund invests.

Policy and legislative changes in the United States and in other countries are affecting many aspects of financial regulation, and may in some instances contribute to decreased liquidity and increased volatility in the financial markets. The impact of these changes on the markets, and the practical implications for market participants, may not be fully known for some time.

Economies and financial markets throughout the world are becoming increasingly interconnected. As a result, whether or not the Fund invests in securities of issuers located in or with significant exposure to countries experiencing economic and financial difficulties, the value and liquidity of the Fund's investments may be negatively affected.

Equipment trust certificate risk. The Fund may also invest in equipment trust certificates, a type of asset-backed security typically issued by a railroad, airline or other transportation firm. The proceeds of those certificates are used to purchase equipment, such as railroad cars, airplanes or other equipment, which in turn serves as collateral for the related issue of certificates. Holders of equipment trust certificates must look to the collateral securing the certificates, typically together with a guarantee provided by the lessee firm or its parent company for the payment of lease obligations, in the case of default in the payment of principal and interest on the equipment trust certificate. Equipment trust certificates are subject to the risk that the lessee or payee defaults on its payments, and risks related to potential declines in the value of the equipment that serves as collateral for the issue.

Redemption risk. The Fund may experience heavy redemptions that could cause the Fund to liquidate its assets at inopportune times or at a loss or depressed value, which could cause the value of your investment to decline.

Cyber-security risk. Cyber-security incidents may allow an unauthorized party to gain access to Fund assets, customer data (including private shareholder information), or proprietary information, or cause the Fund, the Adviser and/or its service providers (including, but not limited to, fund accountants, custodians, sub-custodians, transfer agents and financial intermediaries) to suffer data breaches, data corruption or lose operational functionality.

Financial services sector risk. The Fund is more susceptible to any economic, business, political, regulatory or other developments that adversely affect issuers in the financial services sector, including the commercial banking and insurance industries, than a fund that does not focus its investments in the financial services sector. Economic downturns, credit losses and severe price competition, among other things, can negatively affect this sector. The profitability of financial services companies is dependent on the availability and cost of capital and can be significantly affected by changes in interest rates and monetary policy. Financial services companies are also subject to extensive government regulation, including policy and legislative changes in the United States and other countries that are changing many aspects of financial regulation. Financial services companies will be particularly affected by these changes in regulation, and the impact of these changes on any individual company or on the sector as a whole may not be fully known for some time.

Fixed income securities risk. Fixed income securities are subject to a number of risks, including credit, market and interest rate risks. Credit risk is the risk that the issuer or obligor will not make timely payments of principal and interest. Changes in an issuer's credit rating or the market's perception of an issuer's creditworthiness may also affect the value of the fund's investment in that issuer. The Fund is subject to greater levels of credit risk to the extent it holds below investment grade debt securities, or "junk bonds". Market risk is the risk that the fixed income markets may become volatile and less liquid, and the market value of an investment may move up or down, sometimes quickly or unpredictably. Interest rate risk is the risk that the value of a fixed income security will fall when interest rates rise. A rise in rates tends to have a greater impact on the prices of longer term or duration securities. Interest rates have been historically low, so the Fund faces a heightened risk that interest rates may rise. A general rise in interest rates may cause investors to move out of fixed income securities on a large scale, which could adversely affect the price and liquidity of fixed income securities.

Bank loans risk. The primary risk in an investment in loans is that borrowers may be unable to meet their interest and/or principal payment obligations. Loans in which the Fund invests may be made to finance highly leveraged borrowers which may make such loans especially vulnerable to adverse changes in economic or market conditions. Loans in which the Fund

may invest may be either collateralized or uncollateralized and senior or subordinate. Investments in uncollateralized and/or subordinate loans entail a greater risk of nonpayment than do investments in loans that hold a more senior position in the borrower's capital structure and/or are secured with collateral. In addition, loans are generally subject to liquidity risk. The Fund may acquire an interest in loans by purchasing participations in and/or assignments of portions of loans from third parties or by investing in pools of loans, such as collateralized debt obligations. Transactions in loans may settle on a delayed basis. As a result, the proceeds from the sale of a loan may not be available to make additional investments or to meet the Fund's redemption obligations.

Closed-end investment company risk. Investing in a closed-end investment company will give the Fund exposure to the securities comprising the closed-end investment company and will expose the Fund to risks similar to those of investing directly in those securities. Shares of closed-end investment companies are traded on exchanges and may trade at either a premium or discount to net asset value. The Fund will pay brokerage commissions in connection with the purchase and sale of shares of closed-end investment companies.

Large capitalization company risk. Large capitalization companies may fall out of favor with investors based on market and economic conditions. In return for the relative stability and low volatility of large capitalization companies, the Fund's value may not rise as much as the value of funds that focus on companies with smaller market capitalizations.

Operational risk. Your ability to transact with the Fund or the valuation of your investment may be negatively impacted because of the operational risks arising from factors such as processing errors and human errors, inadequate or failed internal or external processes, failures in systems and technology, changes in personnel, and errors caused by third party service providers or trading counterparties. Although the Fund attempts to minimize such failures through controls and oversight, it is not possible to identify all of the operational risks that may affect the Fund.

Royalty trust risk. The value of the equity securities of the royalty trusts in which the Fund invests may fluctuate in accordance with changes in the financial condition of those royalty trusts, the condition of equity markets generally, commodity prices and other factors. Distributions on royalty trusts in which the Fund may invest will depend upon the declaration of distributions from the constituent royalty trusts, but there can be no assurance that those royalty trusts will pay distributions on their securities.

Small and medium capitalization company risk. The Fund will be exposed to additional risks as a result of its investments in the securities of small and medium capitalization companies. Small and medium capitalization companies may fall out of favor with investors; may have limited product lines, operating histories, markets or financial resources; or may be dependent upon a limited management group. The prices of securities of small and medium capitalization companies generally are more volatile than those of large capitalization companies and are more likely to be adversely affected than large capitalization companies by changes in earnings results and investor expectations or poor economic or market conditions, including those experienced during a recession. Securities of small and medium capitalization companies may underperform large capitalization companies, may be harder to sell at times and at prices the portfolio managers believe appropriate and may offer greater potential for losses.

Structured notes risk. Structured notes are subject to interest rate risk and are also subject to credit risk with respect both to the borrower and to the issuer of the underlying investment. If the underlying investment or index does not perform as anticipated, the investment might pay less interest than the stated coupon payment or repay less principal upon maturity. The terms of structured notes may provide that in certain circumstances no principal is due at maturity, which may result in a complete loss of invested capital. Structured notes may be more volatile, less liquid and more difficult to accurately price than less complex securities and instruments or more traditional debt securities.

U.S. Government securities risk. U.S. Government securities, which may be backed by the U.S. Department of the Treasury or the full faith and credit of the U.S., and may include U.S. Treasury bills, Treasury Inflation-Protected Securities, notes and bonds, are guaranteed only as to the timely payment of interest and principal when held to maturity. The market prices for such securities are not guaranteed and will fluctuate. Certain U.S. Government agency securities are backed by the right of the issuer to borrow from the U.S. Department of the Treasury, or are supported only by the credit of the issuing agency or instrumentality, and in some cases there may be some risk of default by the issuer.

Warrants risk. Warrants can provide a greater potential for profit or loss than an equivalent investment in the underlying security. Prices of warrants do not necessarily move in tandem with the prices of the underlying securities and therefore, are highly volatile and speculative investments.

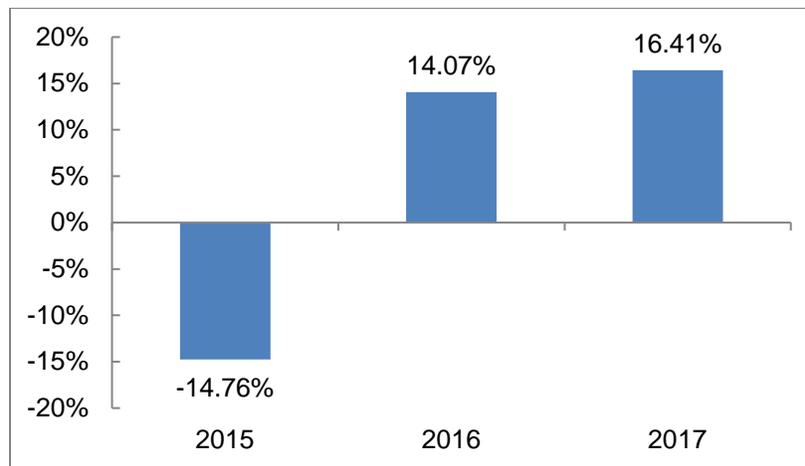

Performance

The accompanying bar chart and table provide some indication of the risks of investing in the Fund. The bar chart shows changes in the Fund's performance from year to year for Class A shares. The table shows the average annual total returns of each class of the Fund that has been in operation for at least one full calendar year and also compares the Fund's performance with the average annual total returns of a domestic broad-based index and secondary index provided to offer a broader market perspective. Performance for classes other than those shown may vary from the performance shown to the extent the expenses for those classes differ. The Fund makes updated performance information, including its current net asset value, available at the Fund's website, www.millervaluefunds.com, or by calling the Fund at 1-888-593-5110.

On February 27, 2017, the Fund acquired the assets and assumed the liabilities of the Miller Income Opportunity Trust (the "Predecessor Fund"), an open-end fund that had substantially similar investment strategies and the same portfolio management team. The performance of the Fund reflects the performance of the Predecessor Fund which had substantially identical investment strategies. Class A, Class C, Class FI, Class I, and Class IS shares of the Fund have assumed the performance, financial and other historical information of the Predecessor Fund's corresponding class of shares.

The Fund's past performance (before and after taxes) is not necessarily an indication of how the Fund will perform in the future. Sales charges are not reflected in the accompanying bar chart, and if those charges were included, returns would be less than those shown.

Calendar Year Total Return as of December 31,

Highest and Lowest Return Quarters during the period of time shown in the bar chart

Highest Return Quarter	09/30/2016	7.86%
Lowest Return Quarter	09/30/2015	(13.69)%

Average annual total returns (for periods ended December 31, 2017)

Class A	1 year	Since inception*
Return before taxes	9.71%	1.49%
Return after taxes on distributions	7.37%	-0.74%
Return after taxes on distributions and sale of fund shares	6.05%	0.22%

Other Classes (Return before taxes only)

Class C	14.58%	2.35%
Class FI	16.40%	2.95%
Class I	16.94%	3.32%
Class IS	17.05%	3.40%
BofA Merrill Lynch High Yield Master II Index (reflects no deductions for fees, expenses or taxes)	7.48%	4.89%
S&P 500 Index (reflects no deduction for fees, expenses or taxes)	21.83%	12.23%

*Since inception of the Predecessor Fund on 2/28/2014.

The after-tax returns are shown only for Class A shares, are calculated using the historical highest individual federal marginal income tax rates and do not reflect the impact of state and local taxes. Actual after-tax returns depend on an investor's tax situation and may differ from those shown, and the after-tax returns shown are not relevant to investors who hold their Fund shares through tax-deferred arrangements, such as 401(k) plans or individual retirement accounts. After-tax returns for classes other than Class A will vary from returns shown for Class A.

Management

Investment adviser: Miller Value Partners, LLC.

Portfolio managers: Bill Miller, CFA, and Bill Miller IV, CFA, have been the Co-Portfolio Managers of the Miller Income Fund since inception in 2017. Each served as Co-Portfolio Manager of the Predecessor Fund since its inception in 2014.

Purchase and Sale of Fund shares

You may purchase, redeem or exchange shares of the Fund each day the New York Stock Exchange is open, at the Fund's net asset value determined after receipt of your request in good order, subject to any applicable sales charge.

The Fund's initial and subsequent investment minimums generally are set forth in the accompanying table:

Investment minimum initial/additional investment (\$)	Class A	Class C	Class FI	Class I	Class IS
General	1,000/50	1,000/50	N/A	1 million/None*	N/A
Uniform Gifts or Transfers to Minor Accounts	1,000/50	1,000/50	N/A	1 million/None*	N/A
IRAs	250/50	250/50	N/A	1 million/None*	N/A
SIMPLE IRAs	None/None	None/None	N/A	1 million/None*	N/A
Automatic Investment Plans	50/50	50/50	N/A	1 million/None*	N/A
Clients of Eligible Financial Intermediaries	None/None	None/None	None/None	None/None	None/None
Eligible Investment Programs	None/None	None/None	None/None	None/None	None/None
Retirement Plans with omnibus accounts held on the books of the fund and certain rollover IRAs	None/None	None/None	None/None	None/None	None/None
Other Retirement Plans	None/None	None/None	N/A	1 million/None*	N/A
Institutional Investors	1,000/50	1,000/50	N/A	1 million/None	1 million/None

* Available to investors investing directly with the Fund.

Your financial intermediary may impose different investment minimums. Please contact them for additional details.

For more information about how to purchase, redeem or exchange shares, and to learn which classes of shares are available to you, you should contact your financial intermediary, or, if you hold your shares or plan to purchase shares through the Fund, you should contact the Fund by phone at 1-888-593-5110 or by mail at Miller Value Funds, c/o U.S. Bancorp Fund Services, LLC, 615 East Michigan Street, Milwaukee, Wisconsin 53202.

Tax information

The Fund's distributions are generally taxable as ordinary income or capital gain. Some distributions may be treated as a return of capital for tax purposes. If you are investing through a tax-deferred arrangement, such as a 401(k) plan or individual retirement account, you will generally not be subject to federal taxation on Fund distributions until you begin receiving distributions from your tax-deferred arrangement.

Payments to Broker/Dealers and other Financial Intermediaries

The Fund and its related companies may pay broker/dealers or other financial intermediaries (such as a bank or an insurance company) for the sale of Fund shares, shareholder services and other purposes. These payments create a conflict of interest by influencing your broker/dealer or other intermediary or its employees or associated persons to recommend the Fund over another investment. Ask your financial adviser or salesperson or visit your financial intermediary's or salesperson's website for more information.
